#### Put your heads in the most capable hands in the industry.

Our Years of Technical Expertise Have Made Us The World's Largest Independent Head Refurbisher

Over 10 years and 18,000 video heads ago, we decided we were going to be the leading independent in quad head refurbishing. To accomplish this, we knew we had to do things better than Ampex and RCA.

Our location in the center of U.S. video technology made it possible for us to put together a marvelous marriage of people and technology. It also made it possible

for us to achieve our goals.

Many of our technical experts and production people have been with us from the beginning. It's people like this, with their special skills, who put their heads together to provide over 1.000 customers all over the world with the most technically perfect refurbished video heads and the finest service support anyone could possibly ask for.

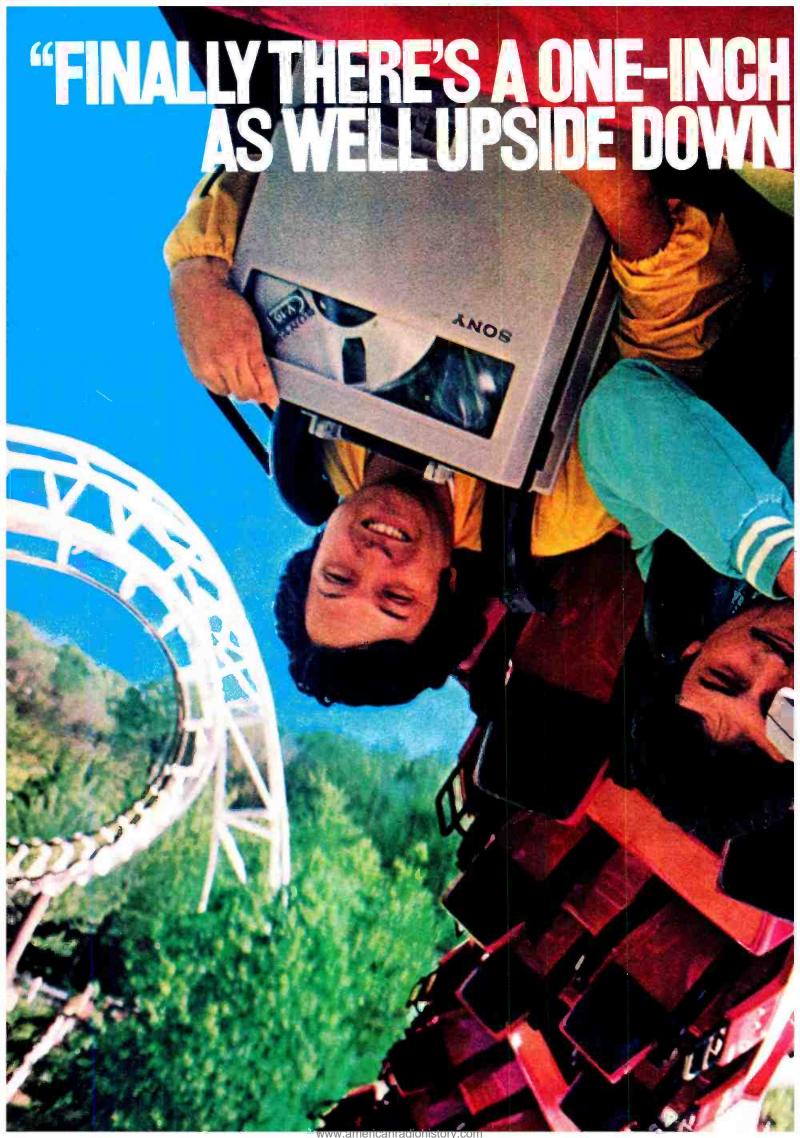

To learn how our experience can help you keep your quads in top shape, write or call, VIDEOMAX, 3303 Scott Boulevard, Santa Clara, CA 95050, (408) 988-2000, Telex: 910-338-0554.

Los Angeles (213) 980-7927, New York (212) 947-8031. Atlanta (404) 992-4490.

Sales and service representatives in Canada, Australia, Hong Kong, Argentina, Mexico, Japan and Germany

portable recorders for about six months.

"Sony one-inch equipment has expanded our capabilities considerably, says Hall. "With a BVH-500, we were able for the first time to get broadcast quality tape on a roller coaster for an upcoming special.

"We also took the BVH-500 on a ferris wheel and in a helicopter to tape 'Superstars at the Ohio State Fair.' It performed as well as they did.

"Now we're using Sony on almost all shows we tape in the field. The big advantages are portability and cost. Durability, too. Sony even bailed us out when we were taping a quad production and our equipment broke down. We used Sony to finish the job, then transferred the results to quad. The client was more than satisfied.

"And when the Dominican Republic asked us to tape the visit of Pope John Paul II, we couldn't have done it without our Sony video recorders," Hall adds.

"Because they travel so well, we could get down there fast and do a professional job."

Of course, Sony makes a full line of one-inch broadcast equipment, all of it backed by state-of-the-art technology. We have video recorders, cameras, editors, and the BVT-2000 digital time base corrector.

For information, write Sony Broadcast, 9 West 57th Street, New York, N.Y. 10019. Or call us in New York at (212) 371-5800; in Chicago at (312) 792-3600; or in Los Angeles at (213) 537-4300.

Like David Hall at Opryland, you'll be impressed. Even if your productions don't have you going around in circles.

## BROADCAST INDUSTRY

#### **RKO May Lose Broadcast** License

The misdeeds of its parent company may jeopardize RKO General's title to WNAC-TV, Boston, and possibly its three other television and 12 radio stations. RKO is in danger of being judged unqualified to hold the WNAC license because General Tire, RKO's owner, has admitted making foreign payoffs and illegal campaign contributions, as well as other illegal actions.

A preliminary announcement by the

FCC July 18 stated that the Commission "could not find RKO General qualified to be the licensee of WNAC-TV." The Commission then met for two days to decide whether to immediately declare RKO unqualified or to hold more hearings. These meetings ended with the panel studying the matter allowing RKO 30 days to submit evidence that it should be allowed to keep the license.

Complicating the issue is RKO's desire to sell WNAC. The prospective buyer was New England Television

Corp., made up of two companies that had filed separate challenges to the license based on General Tire's illegal activities. The sale will be held up until a decision is reached.

If the FCC finds against RKO in this case, the company's remaining broadcast properties would be subject to similar action. The stations include WOR-TV, New York, KHJ-TV, Los Angeles, WHBQ-TV, Memphis, and radio stations in New York, Los Angeles, Chicago, Boston, and Washington.

#### Comsat Direct To Home Pay-TV Proposed

The Comsat direct-to-home terminal might consist of a small dish and decoder like those pictured

The federally chartered Comsat Corp. proposes to have in place as early as 1983 a pay-TV service via a direct to home satellite transmission scheme.

This proposal from Comsat is already knocking the regulatory framework into a cocked hat. The service, which will provide movies, sports, educational, and other services for a fee to the home viewer, raises serious questions about jurisdiction, the status of Comsat, and the impact such a system might have on other services. When Comsat presents its formal filing to the FCC in 3 to 4 months, both the Common Carrier and Broadcast bureaus are expected to assert jurisdictional claims. If the new service comes under the purview of the Broadcast Bureau, it is conceivable, according to one FCC official, that "we could end up

being asked to have hearings on its impact on every single TV market in the country." Nevertheless, FCC chairman Charles Ferris expressed a favorable attitude towards the proposal and said he did not want the Commission to be an obstacle to the expanding choice of video services.

Reaction to the proposal from broadcast and cable TV organizations was cautious. The service which would offer 2 to 6 channels of programming over the 12 GHz band would likely have the greatest impact on other pay services and cable TV which has experienced its greatest growth through its pay TV offerings. Cost for the terminal might be around \$400 and the monthly fee could probably be about \$25 for the programming and terminal maintenance.

#### Zenith Blasts Tl's **Experimental Receiver**

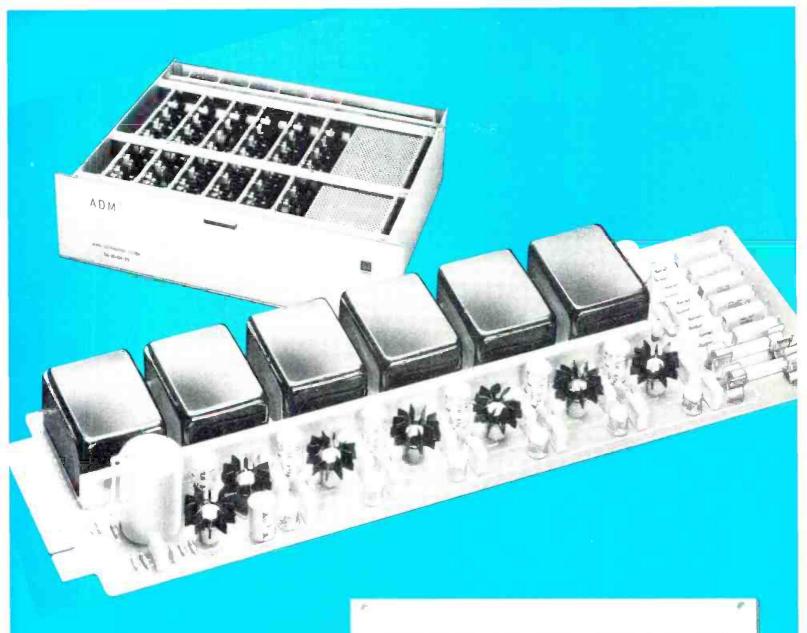

A "high-performance" TV receiver designed by Texas Instruments under contract with the FCC was criticized by Zenith Corp. and other manufacturers for offering what they called a poor cost/benefit ratio.

Terming Tl 'totally inexperienced in engineering, design, and mass production in this field,' Zenith told the Commission, 'There is no basis for assuming that [the receiver] is an optimum, or even a viable, design . . . TI admits, and the FCC laboratory confirms, that the experimental TI receiver is not in compliance with scheduled FCC rules, e.g., UHF noise figures. Zenith went on to criticize other technical aspects of the set, for which TI received the FCC contract in 1976. The Commission has recently granted R.F. Monolithics of Dallas a \$350,000 contract to develop another such receiver, showing its continued interest in the project.

The NAB surprised many by also objecting to TI's design. FCC adoption of the receiver would make existing sets obsolete and raise prices for new sets, NAB claimed. NAB was reportedly also concerned with increased government interference in broadcasting that might occur with the acceptance of the new design.

#### NRBA Meet To Focus On Radio's Changing Needs

The changing needs, concerns, and goals of radio stations entering the 1980s will be the theme of the Sixth Annual Conference and Exposition of the NRBA, taking place October 7 through 10 at the Washington Hilton. Anticipating record attendance, the as-

COMPANY: ADM, THE AUDIO COMPANY

PRODUCT: DA16B/CH20B AUDIO

DISTRIBUTION SYSTEM

RATING: UNEQUALED!

It's unique. It's ADM quality throughout. It's high on our "best seller" list because it solves the troublesome problem of reliable audio distribution for broadcasters. Here are a few outstanding features:

- Each DA16B is a one-input, six-output plug-in card.
- The input and each output is transformer coupled.
- Input levels up to +27 dBv.
- Output levels up to +27 dBm before clipping.
- Each of the six output amplifiers has an individual, front

- accessed gain adjustment, as well as a test point.
- Each CH20B will house up to six DA16B cards, and has a complete set of redundant power supplies with automatic changeover.
- The DA16B/CH20B system is designed and built to meet ADM's highest quality and performance standards, and carries a five year unconditional warranty.

Contact us today for complete details about the many features the DA16B/CH20B system offers.

#### News

sociation has reserved a larger-thanever exhibition hall. Approximately 80 companies will exhibit their wares in 190 booths and 90 suites devoted to the latest in equipment and services for radio.

Attendance at the yearly NRBA meet has snowballed, doubling in the last two or three years, and is expected to top 4000 this year. Radio broadcasters will find workshops on management, promotion, engineering, sales, and

programming issues, with a total of 30 topics to choose from. Programming workshops will each focus on a different format, highlighting Country, AOR, Adult Contemporary, Disco, and Top 40, with a special session on "Radio Programming for the '80s." Engineering topics include "New Audio Concepts," "Special Problems in FM," "Challenges and Opportunities of the 80s... The NITA Proposals," "The 9 kHz Debate," and "Antennas, Bandwidth, and AM Stereo."

Management sessions will cover such

issues as maximizing cash flow, efficient organization of executive time, EEO compliance, evaluation of station worth, and a "Small Market Idea Exchange." Among the workshops for salespeople will be one on "The Vital Role of Women in Sales," as well as "21 Proven Money-Making Ideas" and "True Confessions of a Radio Sales Streetfighter." Promotion sessions will cover major markets, small markets, logo promotions, and "Promotion Mileage Through Public Service."

Other special panels include one on radio deregulation, in question now that H.R. 3333 has been scuttled (see separate news story), and an "FCC Forum."

A special luncheon on Monday, October 8, will feature CBS News consultant Eric Severeid as guest speaker. Severeid is the recipient of NRBA's Golden Radio Award. The Armstrong Awards will be presented at the luncheon, which will be followed by a membership meeting, tours of Washington area radio stations, and the NRBA state directors' meeting. The NRBA Promotion Awards will be presented at Tuesday's luncheon; the guest speaker for . that day has not been announced. A cocktail reception will greet attendees opening night. President Carter has been invited to address the opening session on Sunday afternoon, October 7, but his acceptance had not been confirmed as of press time.

The exhibit hall will open each day of the conference at 10:00 a.m., and the schedule looks tight enough that broadcasters wishing to see the exhibits and attend all the sessions will find themselves extremely busy.

Judging by the rapid growth of its annual get-together, the NRBA seems to be growing steadily. It will have to do so without president Jim Gabbert, however. Word is that NRBA's sixth will be Gabbert's last, as he plans to step down from his post in the not-too-distant future.

#### Group W And WU Sign Satellite, Programming Agreement

Western Union and Group W have agreed in principle to establish a long-term satellite service arrangement that would also give WU access to Group W's Pittsburgh programming facilities.

The Westar satellite system will be used to distribute all Group W-originated video programming among its O&O stations in Baltimore, Boston, Philadelphia, Pittsburgh, and San Francisco, and between its Los Angeles production facilities and Washington, D.C., news bureau. Group W plans to build earth stations in Baltimore, Charlotte, Philadelphia, and Pittsburgh to be

#### News

shared with WU. Existing WU facilities will serve the remaining sites. Group W's programming is currently distributed by terrestrial facilities and videotape.

The agreement is seen as affirming Western Union's intent to serve broadcasters primarily, in contrast with RCA, which deals primarily with cable

Western Union will be able to use Group W's Pittsburgh studio and playback facilities under the agreement. This is expected to allow WU to compete with RCA since WU will be able to insert materials into the programming it currently transmits for the bird's commercial TV users.

Meanwhile, the FCC authorized the launch of Western Union's Westar III satellite into a temporary orbital position, provided the launch takes place by September 30. The orbital position, however, will be subject to change by the FCC and WU may not provide commercial service over the bird without Commission authorization.

COMMUNICATION AND

#### Circle 106 on Reader Service Card

#### AT&T May Provide Private Line Services By Satellite, FCC Rules

AT&T will be permitted to provide non-government private line services over domestic satellite systems as a result of a recent FCC ruling. The Commission denied a request by Western Union and the American Satellite Corp. (ASC) that the Commission's moratorium on such services by AT&T, instituted in 1972, be extended past the July 23 expiration date.

The Commission stated that termination of the moratorium would allow AT&T and GTE Satellite Corp. (GSAT), who jointly operate the COMSTAR satellite system, to totally integrate their existing long-haul domestic communcations facilities. They had previously been blocked from doing so by the requirement that nongovernment private line traffic be transmitted via terrestrial facilities only.

The moratorium was originally instituted to prevent communcations giant AT&T from deterring others from entering the domestic satellite market. ASC had contended that AT&T's power had not declined and that it should continue to be barred from the domestic satellite field. WU asked the moratorium to be kept in force until AT&T had established that its tariff rates for private line services were just and reasonable. The three major TV networks all supported the end of the moratorium.

According to the FCC, domestic satellite carriers have had a fair opportunity to establish themselves, as evidenced by the high utilization of WU's Westar and RCA's Satcom systems. The collective success of the satellite carriers in facility utilization and service development justify the termination of the moratorium, it concluded.

#### Rewrite II Dies In House; 1934 Act To Be Amended

Friday, July 13, was the last unlucky day in the life of H.R. 3333, the ill-fated Communications Act rewrite attempt sponsored by Rep. Lionel Van Deerlin. Faced with an almost total lack of support for the bill among the members of the House Communications Subcommittee and strong opposition from citizens' groups and some broadcasters, the bill was scrapped after a two-day unsuccessful stab at markup.

In a memo to the subcommittee members, Van Deerlin suggested dropping the total rewrite and instead concentrating on amendments to the common carrier sections of the 1934 Communications Act. Common carrier reform is "urgent and crucial," he stated, adding, "The world can rock

#### News

along very well with broadcasting under the 1934 act."

Broadcast reform may not be dead, however. Several legislators have expressed intent to introduce broadcast amendments to the existing act. Al Swift (D-Wash.), a member of the subcommittee, said he would propose such legislation, minus controversial issues like the much-opposed spectrum fee or cable retransmission consent.

Few observers noted much regret at

the passing of H.R. 3333. The NRBA, however, sent a last-minute plea to its membership urging them to wire sub-committee members not to kill the bill. When that attempt failed, the association lost no time in proposing guidelines for the legislative deregulation of radio. The proposals, submitted to Congressmen Van Deerlin and James Broyhill, included extension of the license term to seven years; a public interest, convenience and necessity standard to be met by a certain percentage of nonentertainment programming; license revocation only for willful and

intentional reporting of false information to the FCC, willful or intentional failure to operate as set forth in the license, or violations of lottery, fraud, and/or obscenity laws; prohibition of FCC evaluation of program content or format; repeal of sponsorship identification rules; no entertainment of competing applications when a renewal application is designated for hearing; ownership to be limited to 10 AM and 10 FM stations, with no restrictions on cross-ownership; standards for petitions to deny or revoke to be set by FCC; and establishment of a fund for minority applicants.

NAB president Vincent Wasilewski issued a statement following Rewrite II's demise saying that Van Deerlin's attempt had "focused national attention on the need for regulatory relief for broadcasting and other telecommunications industries . . . This latest action, however, acknowledges that much of the original '34 law remains valid." He called for "a "creative blending" of the old with the new, "referring to a position adopted by the NAB board of directors in June, 1978.

#### Personal Attack Rule, Fairness Doctrine Modified

The personal attack rule no longer applies to uses of broadcast facilities by legally qualified candidates for public office as covered under Section 315 of the Communications Act, according to a recent ruling by the FCC. The action also exempted such uses from the Fairness Doctrine.

NBC had requested the ruling from the Commission a year ago. In response to the request, a rulemaking and inquiry procedure was instituted. As a result of the inquiry the FCC decided to continue its policy of regarding the Fairness Doctrine and Section 315 uses as mutually exclusive. The personal attack rule was also brought into conformity with that policy by amending the rule to exempt all Section 315 uses by candidates. In addition, the exemption was extended to attacks made by non-candidates during Section 315 uses.

#### Midnight Sun Signs Landmark Agreement With Citizens' Coalition

Midnight Sun Broadcasters, Inc., licensee of seven Alaska radio and television stations, and Alaskans for Better Media, Inc. (ABM), a nonprofit coalition of citizens' groups based in Anchorage, have signed an agreement whereby Midnight Sun will substantially alter its policies on local programming, equal opportunity employment, and Fairness Doctrine issues. If the agreement is approved by the FCC, ABM's petition to deny, filed against Midnight Sun early last year (see

#### News

BM/E, April, 1978, p. 6), will be withdrawn.

ABM, comprised of environmental, women's, native Alaskan and other minority, and student groups, came together in September, 1977 to examine the state's broadcast media. They complained that Midnight Sun displayed editorial bias, overcommercialization, and inadequate local programming. ABM also said that the broadcaster

charged different rates to opposing political candidates, restricted PSAs to persons who ran paid advertisements, and had a poor equal opportunity employment record. Another major beef was the lack of coverage given to environmental issues.

According to the terms of the agreement, Midnight Sun will set up Citizens' Advisory Boards in Anchorage, Fairbanks, Juneau, and Ketchikan. The boards will help with community ascertainment, recommend topics for local programming, and determine Fairness Doctrine compliance.

Midnight Sun also agreed to increase the number of PSAs and guest editorials it broadcasts according to specific guidelines and to improve its public affairs programming, with emphasis on the environment and native Alaskan, women's, and consumer issues. The broadcaster promised to raise its percentage of female and minority employees to FCC-designated minimums and improve news programming by increasing the number of news employees and purchasing more equipment.

ABM has expressed optimism about getting FCC approval for the agreement, which includes provisions for reimbursement for ABM and Media Access Project, ABM's Washington-based counsel, as well as withdrawal of ABM's petition to deny.

#### Comments, Information Sought On Loud Commercials

The FCC has begun an inquiry on current developments in measuring the loudness of radio and television commercials and whether Commission action is needed on the problem. Since 1965, Commission policy has held that "objectionably loud" commercials are contrary to the public interest and should be avoided. At that itme, however, the FCC conceded that there was no reliable method of measuring "objectionable loudness." Field tests conducted between 1965 and 1973 concluded that audio processing, while common, was used equally with programs and commercials. Attempts to develop a device for measuring loudness during that period acheived little

The Commission now feels that researchers have a better understanding of loudness and are capable of producing devices to measure it. To this end, it is asking for comments and information on suitable methods or devices for measuring loudness; the extent of "objectionable loudness" in commercials and its causes; listener reaction to loudness; standards for loudness; and ways of controlling it, including marketplace forces and FCC regulation.

Comments are due by December 15. The Commission noted that it preferred that the matter be settled by self-regulation, but that it would take regulatory action if necessary.

#### FCC Denies Exclusivity Request For Donahue Show

The FCC has denied a request for syndicated exclusivity protection sought by WOTV-TV, Grand Rapids, Mich., for its coverage of the *Phil Donahue Show* because of a rule excluding live programs from protection. WOTV, owned by Manhattan Cable Television, Inc., carries the show on tape under

## From paint-by-the-numbers to creating a masterpiece.

We have become a generation of sophisticated television viewers who demand and expect professionalism at every level. From putting together a simple, single-camera training tape to the intensity of a two-day editing session preparing a ninety minute special, the goal is the same — effective communication.

Only one editing system virtually guarantees the maximum effect of your creativity—the CMX 340X.

We have spent many years of design effort to bring you a system that will support you today, and continue to be your most useful production tool as your demands grow. So that the editor can get the most out of the system, we offer formal training seminars at all levels with the assistance of some of

the top editing talent in the broadcast industry.

The CMX 340X is, indeed, a sophisticated system using state-of-the-art distributive processing techniques and advanced software. It is this unique application of computer technology that gives the editor the greatest speed, simplicity of operation and a complete range of editing options. The CMX 340X is fully expandable, so that you can buy only what you need when you need it, with the assurance that your system can be upgraded as your requirements become more diverse.

Surprisingly, the best is not expensive. The financial concerns of a major network are no different from those of a commercial organization setting up a

production facility — maximum capability for minimum investment.

You can look at and evaluate and test other editing systems. However, when you're done and want the greatest capabilities and the best value now and in the future, you'll buy the CMX 340X.

The system that will be your most useful production tool as you grow from beginning art student to Michelangelo.

contract with Multimedia Program Productions, Inc., which joined in the petition. Two local cable companies, General Electric Cablevision Corp. (GEC) and Muskegon Cable TV, carry the program live in the same market by picking it up on satellite from WGN in Chicago, where it originates. The WOTV version is aired later.

WOTV asked GEC and Muskegon to give it exclusivity protection a year ago. Both refused the request because at that time WOTV was showing an edited half-hour version of the hourlong show. When WOTV amended its contract with Multimedia to carry the full hour, it again asked for exclusivity and was again refused. It then turned to the FCC, which denied on the grounds that the syndicated exclusivity rules specifically exempt live programming. The Commission also noted that WOTC had not presented evidence that it would be harmed financially in any significant way if a waiver were not granted.

The decision sparked controversy

among Commission members, and several issued separate statements criticizing it. Abbott Washburn, joined by Robert E. Lee, noted that similar situations "could well happen in scores of markets as WGN develops into a superstation." He claimed that the decision could force Multimedia to discontinue the call-in portion of the show and its live broadcast on WGN. "Clearly," he stated, "this is the exact opposite of encouraging diversity of programming."

Commissioner Quello, while "reluctantly" concurring with the decision, expressed concern that the FCC's "permissive attitude toward the superstation concept" could result in "gross basic inequities in disregarding program property rights and the further threat to an orderly system of TV allocation."

Commissioner Brown, also concurring, was "troubled...that there is no explicit policy justification for excluding live syndicated programs" from protection. As did Washburn, Brown noted that when the rule was adopted, in 1972, it was not technologically possible to economically transmit live programming on a national basis.

#### United Video Will Pay Cable Systems To Use New Service

United Video has announced plans to pay cable systems one cent per subscriber per month to carry the New York-based Music Preview Network, an advertiser-supported service to begin this fall. Record companies and promotional agencies will pay MPN to play their new releases; each hour will be 95 percent music. Live announcers will be featured and transmission will be full-frequency mono.

The signal will be uplinked to Satcom I and will be available as an audio subcarrier to cable systems with earth stations. United Video will be responsible for marketing the service and assisting cable systems in obtaining the proper equipment.

proper equipment.

United Video's president, Roy L.
Bliss, is claiming that "growth will be phenomenal" for MPN. "This service reinforces our belief in the boundless entertainment capabilities of cable," he said.

#### K.C.'s UHF Indie Scores Rare Prime Time Coup

KBMA-TV, the Scripps-Howard UHF indie in Kansas City, pulled off a rare coup in the Nielsen May sweeps when it beat out the NBC-TV affiliate in its market, WDAF-TV, in metro share with a 22-21 edge in the highly important prime-time period, 7-10:00 p.m. Mon.-Fri.

(What happens next is the difference between Fidelipac Blank-IT and your current bulk eraser)

Break the law of gravity with your current bulk eraser and go pick up another one. Do the same with Blank-IT, and just go pick it up. Blank-IT goes right on bulking.

Fidelipac houses Blank-IT in a lightweight, balanced case that's virtually indestructible. Installs a high mu core with a longer ON duty cycle and more magnetic strength than any hand-held eraser. Builds thermocouple protection into that core for burn-out proof operation. Tops it with a balanced, contoured handle that stays where we put it. And unconditionally guarantees Blank-IT against electrical burnout and mechanical breakage for a full year after purchase.

\$**59**<sup>95</sup>

#### Portable Production System Works on Battery or 120-Volt AC Line!

Automatic Phase Control. No need to adjust controls on individual sync phase and sub-carrier phase for each camera. Simply plug four cameras into the switcher and the automatic phase control does the adjustments for you. Compatible with any camera. Customizes to your equipment. Connects to VTR. The Asaca ASW-100 portable switcher is designed for ENG and EFP cameras, including Asaca-2000. Small and light with features ideal for field production.

Operates on battery pack, 12-volt vehicle battery, or 120-volt AC line. With the latter two, the switcher can accommodate multiple cameras with VTR. Full operations remote controls optional. Designed for use with Asaca-2000 camera. Non-Asaca cameras containing internal gen lock circuitry use black burst output, providing for each camera position. Painting control permits control of color, iris and pedastel of TK 76, HL 77 and Asaca-2000.

The ASW-100 includes a "sync" generator. Internal gen lock circuit permits VTR signals as a fourth input for editing or program modifications. Switcher is vertical

interval and processes composite video signal. Mixer-fader is included, capable of special effects.

Optional monitoring with AMB-100 monitor. Provides three or four B & W source monitors and wave form monitor for use with external color line monitor.

Here's a full production system capable of expanding your mobile operation while maintaining full broadcast quality.

Contact us for a free demonstration.

#### News

Although both stations were tied at 11 rating points in the metro ratings, KBMA nosed out the NBC affiliate in what has to be one of the most stunning rating developments in the independent ranks for an entire sweep rating period in a major market. In the Nielsen DMA only one percentage point separated the independent from the NBC affiliate, with WDAF garnering an 11 rating and 20 share that KBMA-TV nearly matched with 10 rating, 19 share.

"We did it with a mix of sports, movies, and special programming such as the OPT offering," said Bob Wormington, KBMA president and general manager.

Wormington, who is also chairman of the INTV, noted that the ousting of a network affiliate in a major market in a prime-time sweep period was milestone for an independent station. He expects the gap between network affiliates and independents to continue to shrink in other markets as more and more programming becomes available to independent TV stations.

The rare accomplishment of ousting the NBC affiliate from third place in the Kansas City market in Metro share in a sweep period also established KMBA-TV as one of the top-rated independent TV stations in the country. "We've checked 15 of the top markets," said Wormington, "including Chicago, Houston, Dallas, and others, and our sweep ratings and share, like Abou Ben Adhem, lead all the rest."

#### **News Briefs**

The NAB has repeated its request that the FCC establish a joint Government-Industry Advisory Committee on full-time radio service. The proposed committee would prepare indepth studies of the various methods of accomplishing full-time service for all radio stations without diminishing service for other classes of stations . . . . The Supreme Court's decision permitting newspapers to print the names of juveniles accused of crimes was praised by NAB senior VP and general counsel Erwin G. Krasnow . . . . Portions of U.S. Supreme Court proceedings were broadcast for the first time ever by CBS Radio in late June. Tapes of sessions in the Pentagon Papers case were aired during a special news program about the case.

A federal appeals court has upheld the FCC's denial of a Fairness Doctrine complaint against CBS, Inc., and its O&O stations. The complaint, filed more than two years ago by the American Security Council Education Foundation, accused CBS of violating the doctrine in its coverage of national security issues . . . The FCC has revised and clarified its rules requiring commercial broadcast stations to announce their obligation to serve the public interest. The new version of Section 73.1202 does not change previous requirements, but rather states them in a more understandable manner.

The Associated Press Radio Network now has affiliates in all of the 50 states. Its latest affiliate is KKUA, Honolulu . Arnold S. Lerner, chairman of WLLH, Inc., Lowell, Mass., has been elected to a one-year term as chairman of the NAB Radio Board of Directors. Edward O. # WORLD'S LARGEST SELLING TBC/FRAME SYNCHRONIZER.

## SMALL WONDER.

ADDA's VW-1 Frame Synchronizer with infinite-window time base correction works digital wonders with television signals. Here's a frame synchronizer that prevents blanking problems, locks remote, network, EFP/ENG and satellite feeds to your station reference. Plus it offers freeze frame and freeze field capabilities.

Teamed with heterodyne color VTR's, the VW-1 time base correction goes all the way with an infinitely wide full-frame window. The VW-1 features adjustable velocity compensation and chrominance-to-luminance delay. Blanking is always within specifications. A remote control panel accessory is also available.

Viewers of the 1979 Tournament of Roses Parade and Super Bowl XIII telecasts witnessed brilliant performances by the VW-1.

Now, you too can see why our recognized low cost, compact size and unmatched combination of features have allowed us to place more units in operation than anyone else in the world. No one comes close. Small wonder.

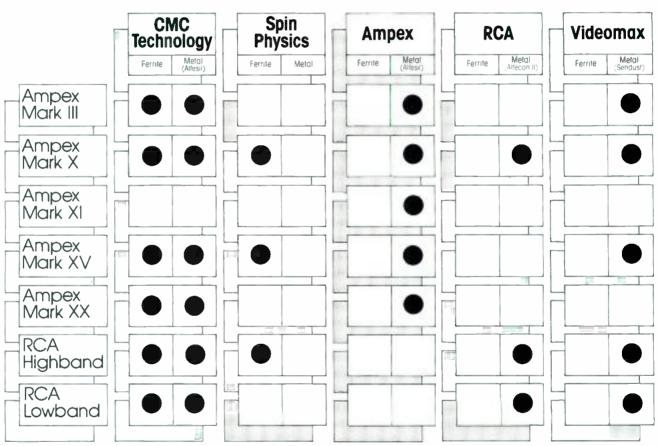

Call or write for information or a demonstration. 1671 Dell Avenue, Campbell, California 95008 (408) 379-1500.

ADDA CORPORATION

# The Head Comparison.

Because CMC Technology offers both ferrite and alfesil transducers for most major VTR's, we can give you unbiased advice on the head you should use to get the best quality at the lowest cost per operating hour.

Product refurbishing by manufacturer

## to-Head

#### Check and compare.

At CMC Technology, we refurbish more kinds of videa head assemblies than any other company. As the comparisan chart shows, we offer both ferrite and alfesil transducers for most major VTR's. This means we can give you what our competitors can't—unbiased advice on the head assembly you should be using to achieve optimum performance at the lowest cost per operating hour.

What the chart doesn't show you is just as important-

Since 1973, we've supplied a major share of video head assemblies to ABC, NBC, CBS, major U.S. production houses, the BBC, and the Australian Broadcasting Commission.

CMC Technology is the only company that converts the Ampex Mark X to a Mark XV, which is compatible with AVR-2's and AVR-3's.

Our XPL-series transducers are the only ferrite transducers that retain the original geometry of the industry standard for total compatibility.

CMC Technology has the shortest turnaround time of any company—usually five days or less.

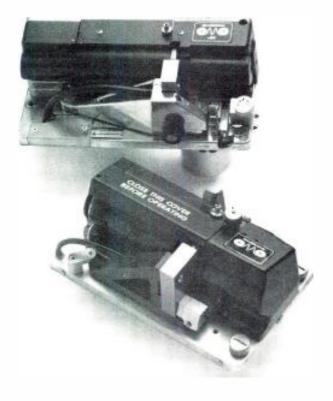

All this adds up to one thing: Confidence. When you do business with CMC Technology, you can be sure you're dealing with an experienced, reliable company—someone you can depend on.

#### Make us prove it.

We're so confident of our products that we'll send you one of our heads to evaluate at no obligation. If you tike it, keep it. If you don't, send it back. It's as simple as that.

For superior quality at the lowest cost per operating hour, put our heads to work for you. Call or write us today.

### RADIO

PROGRAMMING & PRODUCTION FOR PROFIT

#### Serve The Weather Straight Or With The Flavor Of Your Choice

THE WEATHER FORECAST is a universal of radio programming across all formats, station sizes, markets. But that does not mean that every radio weather report has to be exactly the same dish. A radio management has a wide choice as to the style of weather forecasts and can use the weather to strengthen the station's image and identity.

Are you unhappy with what your weather reports are now doing for your programming? The following is a brief review of the main kinds of weather data sources, with the general character of each. You can choose from among the sources the kind that seems most likely to meet your need.

The U.S. Weather Bureau, now part of the National Oceanic and Atmospheric Administration (NOAA), is of course the basic source of weather information in this country. NOAA has a series of effective methods for distributing developed weather data to the public. Two of these interface directly with radio broadcasting (as described first in the May, 1977, issue of BM/E).

The NOAA teletype service is a 24-hour wire service, with a short forecast repeated every few minutes and updated every couple of hours. If a radio station subscribes, NOAA will pay the telco line charges into the telephone central office in the station's city: the station picks it up from there. Thus the only cost to the radio management is a dedicated telco line into the local central office, plus the rent or capital charge for a teletype machine.

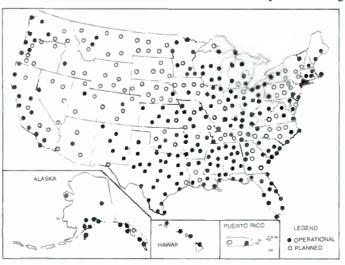

The NOAA teletype advisories can be read on the air as received or used as

the basis for air scripts developed by station personnel. This is authoritative, brief, no-frills weather.

The other relevant NOAA data pathway is a 24-hour over-the-air radio service, coming from specially constructed NOAA FM transmitters operating on three frequencies in the 160 MHz band. There are now nearly 300 such NOAA stations; in a few months there will be about 340, covering areas that hold more than 90 percent of the U.S. population (see the map). The average coverage area of an NOAA weather transmitter is about 40 miles in radius; every medium-to-large city is within reach of one, and many smaller cities besides.

Each NOAA station puts on the air every few minutes a recorded forecast for the area served by that station. This is updated every few hours. In addition, a special warning bulletin goes out whenever there is an emergency condition in the area.

The special receivers needed to bring in the NOAA radio broadcasts are marketed by at least 35 firms, including the large electronics chains such as Lafayette, Radio Shack, and Heathkit and the major manufacturers — RCA, Zenith, General Electric, and others plus many smaller firms. Prices range from less than \$20 for a single-channel crystal receiver to several hundred dollars for a model with 600-ohm output, high sensitivity, and switch tuning to all three frequencies: 162.40 MHz, 162.475 MHz, and 162.55 MHz. Many of the very small receivers, incidentally, are designed to be carried by

NOAA weather transmitters in operation as of July 16, 1979

Model 1701A
Designed for lowest-distortion
Measurements (.0009% or >100 dB)

Model 1710A Designed for use in strong RF fields

Model 1700B

Designed for general measurement applications

# When you need to know about distortion, pick from the analyzers that are easier, faster, and tell you more

#### The performance leader

When you talk to Sound Tech, you're talking to the firm that introduced a new era in improved distortion measurements with its 1700 Distortion Analyzer.

Now you can choose from three separate Sound Tech analyzers plus several options.

In Sound Tech Analyzers you can get conveniences that simply aren't available elsewhere—conveniences like these:

 RMS, peak, and averageresponding meter circuits. Different standards require different type meter circuits

- Higher sensitivity measure distortion as low as .0009%
- Faster and more repeatable pushbutton frequency selection measures in 5 seconds
- Balanced and bridging VM for measuring from 30  $\mu$ V to 300 V even on floating circuits
- Very-low distortion internal test oscillator with high output level of +26 dBm—adjustable down to -90 dBm in 0.1 dB steps
- Balanced, floating, centertapped but transformerless output for low distortion
- Intermodulation distortion measuring option

- 150-ohm and 600-ohm outputs
- Two-year parts and labor warranty

#### See about our new easy purchase plan

We also have both an easy purchase plan and a lease plan that can help when budgets are running low.

So contact Mike Hogue/Larry Maguire now. Arrange for a demo and see how useful these analyzers are — not just for measuring distortion but as high-sensitivity balanced voltmeters and as low-distortion signal sources.

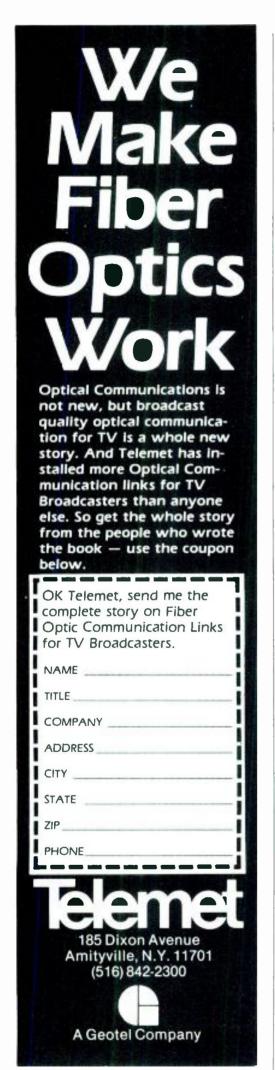

Call today.

Circle 121 on Reader Service Card

#### **Radio Programming**

campers, hikers, or boaters.

The receivers differ in having or not having special "trigger" circuits which respond to alerting tones sent out by NOAA. There are two tones, 1650 Hz for routine updating of the weather forecast and 1050 Hz for emergencies.

The tones can be heard on any receiver and serve as aural alerts to an upcoming broadcast. A number of available receivers, however, can be put in a mute or standby condition and be turned on by the NOAA tones. A popular operation is like that of the Gorman-Redlich receiver described in the January, 1979, issue. The 1650 Hz tone throws a relay that can start a tape machine to record the broadcast. The 1050 tone, in addition, opens the audio to the loudspeaker so the warning bulle-

tin can be heard.

Radio managements use the NOAA broadcasts in a number of different ways. The FCC has given blanket authorization to put them on the air directly. If they are taped, the recordings can be put on the air within an hour of receipt only. Further, the information in the NOAA broadcasts can be reshaped by station personnel to fit better into the management's objectives.

Another standard class of weather sources, available in every part of the country, are the wire services. AP, UPI (teletype and audio), and MBS (audio) have their own weather staffs. Many stations find this quite sufficient to their purposes and very convenient to use: staff effort is minimized.

In next month's column, BM/E will describe the activities of typical private weather firms that work for broadcasters.

BM/E

#### BM/E's Program Marketplace

#### **Syndicators For Radio**

**WCRB Productions, Inc.** 

750 South Street Waltham, Mass., 02154 Tel. 617 893-7080

IF A SYNDICATED PROGRAM series of 39 two-hour programs a year has been self-supporting for more than 20 years and is still growing, we have proof that a large number of radio listeners have adopted the program on a long-term basis. The proof is especially convincing in the case of the Boston Symphony concert series put out by WCRB Productions since the series consists of original recordings made at regular concerts, a high-cost operation, with duplication onto stereo tape for distribution to subscribing stations.

The Boston Symphony series grew out of commercially successful live broadcasts of the orchestra's concerts by FM station WCRB in Boston. The management concluded in 1958 that the strong audience response to these broadcasts could be duplicated in other cities, with profit to both the syndicator and the subscribing station. Acordingly, Charles River Broadcasting, Inc., owner of WCRB, set up a new corporation, WCRB Productions, to carry out the syndication program.

WCRB Productions had to work out problems in several areas: contractual and financial relations with the Boston Symphony management; a live concert recording technique of rock-sure quality; and promoting the program to likely users. Two decades of success on both the financial and the technical fronts show how well all these problems were solved.

The series has going for it, of course, the world-wide fame of the Boston Orchestra and of the acoustics in its home, Boston Symphony Hall. The hall is known far and wide as one of the best places in the world to listen to orchestral music.

WCRB Production's recording team has made a name for itself, too. Team leaders Richard Kaye and Louise de la Fuente have a reputation for effectiveness in their handling of microphones, tape recorders, and other equipment to capture symphony concerts with maximum fidelity.

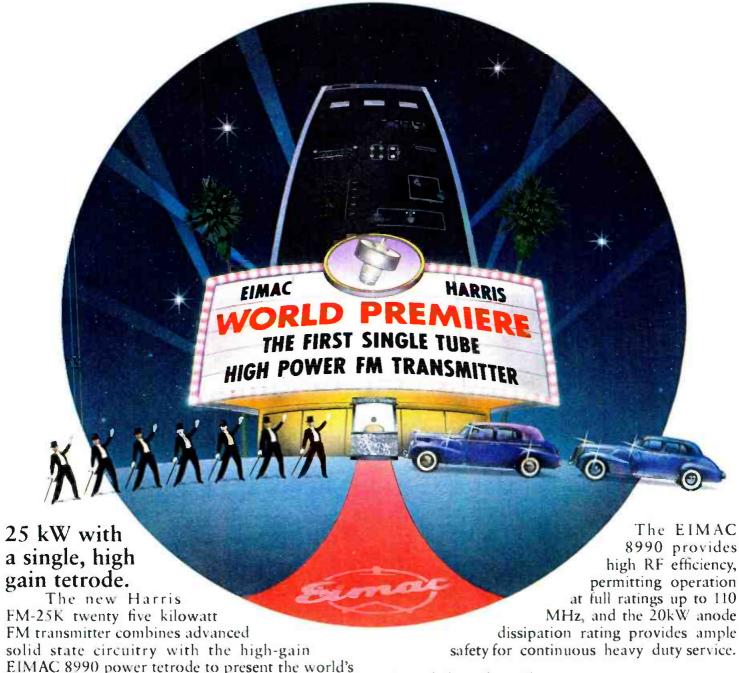

The subscribing station pays for the Boston series with a fee based on market size. Each program has room for four local commercials. Some 80 stations are now regular subscribers; both commercial and noncommercial stations are included.

WCRB Productions has another large-scale success, this one drawn from the regular concerts of the New York Philharmonic Orchestra. Again, there is a series of 39 programs a year, each two hours long. The series is sponsored by the Exxon Corporation and is free to the subscribing station. There are three local availabilities in each program. More than 200 stations are using the New York series.

In the Boston and New York series there are expert commentators who can be introduced by the local announcer and who introduce the music, conduct intermission interviews, and give biographical sketches of composers.

WCRB Productions has also for a

## EIMAC's new 8990 tetrode premieres in Harris' FM-25k.

first one tube, high power FM transmitter. The FM-25K is the first transmitter to utilize

the high gain, high efficiency 8990 tetrode as the final amplifier. It is driven by solid state amplifier modules to provide greatly improved transmitter reliability and a reduction in overall tuning requirements.

The ripple-fin anode of the 8990 provides exceptional cooling at reduced air requirements for quiet operation and the PA cavity design eliminates troublesome sliding contacts and assures wide RF bandwidth.

#### Send for details.

Complete specifications on the exciting new FM-25K transmitter are available from Harris Corporation, Box 4290, Quincy, IL 62301. And complete data on the 8990 power tetrode is available from EIMAC, Division of Varian, 301 Industrial

Way, San Carlos, CA 94070. Telephone (415) 592-1221. Or contact any of the more than 30 Varian Electron Device Group sales offices throughout the world.

#### **Program Marketplace**

long period produced a yearly series of Boston Pops concert programs, again two hours long each. These nonsponsored programs cost the subscribing station a fee, based on market size; each program has room for 10 local availabilities. The venerable Arthur Fiedler was, of course, the conductor for the whole life of this series until his death in July; his successor (not announced at the time this was written) will be picked up in the next series.

In a period of expansion, WCRB Productions is now applying its expertise to additional series, a most logical extension. One new series is drawn from the regular concerts of the Israel Philharmonic; the WCRB team travels to Israel to record these two-hour programs. Another is Music From Marlboro, a series of 90-minute chamber music recitals recorded during the regular summer series given in the Vermont town under the direction of Rudolph Serkin, with a covey of world-famed performers to fill various chairs in the different groupings.

The latest item in this expansion operation is a series with the first installment available this past July; jazz concerts, each one hour long, produced by Willis Conover. He has been known all over the world for many years as the maestro of jazz on the Voice of America. He interviews jazz performers, presents their music, and comments on it in a style that has made him welcome wherever jazz is admired.

WCRB Productions is thinking about other additions to its repertoire, assistant manager John Emery told BM/E. He also said that the outfit is keeping a sharp eye on the satellite explosion. Sometime in the future the birds are sure to lift the quality, speed, and economy of WCRB's program distribution, (along with those of all organizations sending out programs over wide areas). Needed are the spread of earth terminals to many radio stations (now underway) and the development of organizations for handling satellite application to this use conveniently and economically.

The technical quality of WCRB's programs is sure to be affected strongly in the future by digital recording, too. Emery told BM/E that WCRB has already used digital machines on an experimental basis, with highly favorable results. When digital equipment can be had freely at reasonable prices, WCRB, and all the hundreds of other organizations making recordings of live music, will surely go digital. The combination of digital origination and satellite distribution promises a revolution in the quality of the syndicated programs bought by radio stations. BM/E

# 1979 1979

In 1964 Vega developed the first wireless microphone system that offered full-fidelity sound, the first real innovation in microphones in over 50 years. Now we are proud to introduce our latest innovation ... Dynex!

Dynex adds dynamic input range expansion to wireless microphone operation thereby eliminating the need for continuous mic gain adjustments. Set it and forget it ... it's that simple. Two years of extensive field use with the Dynex option enables us to guarantee the same proven reliability, quality and performance that you have come to

Model 77 Transmitter

expect from Vega.
We have continually improved our systems during the past 15 years, so you can be assured that

today's Vega systems are designed with the latest in high-technology electronics and sophisticated audio engineering. Besides offering you the finest systems available, Vega is constantly working with the industry to further the art of audio processing. One example is Vega's F.C.C. petition which resulted in obtaining clear wireless channels for broadcasters and filmmakers last year.

Vega offers a variety of systems that give you a new order of freedom and that foster new confidence in your performance. When new techniques are developed ... they're from Vega.

## Why you should continue Plumbicon® TV tubes in

The future for ENG grows brighter and more exciting with each passing day. The same can be said about the ½-inch Plumbicon, the TV camera tube that made Electronic News Gathering possible and practical at the same time.

Reflecting our continuing commitment to provide the broadcast community with state-of-the-art Plumbicon tubes—(it was a Plumbicon tube that revolutionized color TV broadcasting in 1964)—we invested almost four million dollars in the development of the %-inch Plumbicon tube, most of it before the first ENG cameras were even introduced. Very early in the game, we felt that electronic journalism, with the support of modern tube and camera technology could surely add a new dimension to television broadcasting.

Even with that confidence, the phenomenal acceptance of Plumbicon-equipped portable cameras nearly overwhelmed us, as it did every-

one else. In just 18 months we have supplied almost 4000 of these tubes to U.S. broadcasters!

In a market of such magnitude, it was not unexpected that other ½-inch camera tubes would arrive on the scene, sooner or later, with the usual "ours is better than theirs" claims. We feel that much conflicting and contradictory information has been given to the broadcast industry, regarding these new tubes. In the final analysis, only you, the broadcaster, can judge the system performance of these tubes and compare their performance in the camera with the Plumbicon tube.

In the meantime, we offer some of our own experience on the system performance of the Plumbicon tube compared to the Saticon (Registered trademark NHK/Japanese Broadcasting Corporation), one of these recently arrived new products.

**Sensitivity** Sensitivity is the critical parameter in ENG. In the field, where you have no control over lighting you need the Plumbicon tube's greater sensitivity to maintain an acceptable signal-to-noise ratio in your final edited news story. Even in those next-trimpossible lighting situations, you are more assured of producing a useable picture with a Plumbicon-equipped ENG camera than with the same camera equipped with the Saticon.

**Resolution** Your final, edited tape is the criterion by whic you must evaluate ENG system performance, an your pick-up tube should always be selected wit that fact in mind.

Resolution specifications are a good example this principle. Plumbicon tube sensitivity gives ye enough latitude for aperture correction with very little loss in S/N ratio, to achieve the required 100% modulation depth at 5 MHz, but the resolution of most ENG systems is limited by the video tape equipment used. From the systems perform ance point of view, therefore, a pick-up tube chosen solely for its resolution specifications may have no positive effect at all on picture quality!

The Plumbicon tube has lag characteristics that are so favorable that it can be used entirely without bias light. If your camera provides bias light, it simply improves the Plumb con's lag characteristics. The Saticon *must* use bias light or its pictures will be seriously degrade In the middle of a news event, should a bias light lamp burn out .....!

## to specify <sup>2</sup>/<sub>3</sub>-inch your ENG cameras.

#### **Temperature Stability**

Since the Plumbicon's photoconductive layer is processed at temperatures in excess of 175°F, your Plumbicon tube can tolerate temperature excursions that may take the photoconductor to 160°F. The Plumbicon tube tolerates 160°F ambient without damage of any kind. The Saticon, however, will experience partial or complete layer destruction at these temperature levels after a few hours. It is totally conceivable that your ENG camera will experience temperatures which will cause the Saticon tube in your camera to approach a critical life condition.

Based upon actual operating experience with the Plumbicon, rather than on statistics of accelerated life testing, you can expect from 2 to 5 years of service, depending upon operating practice.

**Burn-in** The Plumbicon exhibits no, or very little perceptible picture sticking (burn-in) especially in highlights. The Saticon, on the other hand, has been observed to have a noticeable characteristic of 'hanging-up' on bright highlights and also tends to exhibit picture sticking after a camera has been focussed on a scene for any length of time.

**Registration** The Plumbicon tube incorporates a precision gun assembly for controlled geometry and registration. Our final testing includes a computerized registration check which matches each tube's performance with a data base which includes readings on previously tested tubes. Should any tube fail to match up to this data base, it is rejected. This is added insurance that your camera will maintain precise registration even after you replace your original Plumbicon tubes. Needless to say, you do not have to replace the Plumbicon tubes in "sets."

Storage The Plumbicon can, of course, be stored for many months without deterioration. But why store TV camera tubes? Storage means money. Amperex service to the broadcast industry is justly famous. Delivery of replacement tubes anywhere in the USA within 24 hours is routine. In extreme emergency situations, we have shipped tubes clear across the country in as little as eight hours.

We expect you to make your own comparisons and we are sure your findings will agree with ours. One of the things that may not be apparent from your comparisons is the fact that Plumbicon TV camera tubes continue to stay abreast of the needs of the broadcast industry after more than ten years of production which has put almost 150,000 Plumbicon tubes into broadcast stations around the world.

When you specify Plumbicon tubes in your ENG cameras, we deliver a lot of experience.

#### TRANSION

PROGRAMMING & PRODUCTION FOR PROFIT

#### WHIP-TV's Battle Of Gettysburg: Low-Budget Production Wins Audience And Recognition

WHEN THE BUDGET for a production is restrictive, an enterprising programming department like that of WHIO-TV, Dayton, Ohio, can sometimes find a way to produce an award-winning show without leaving the studio.

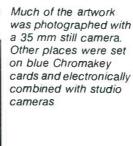

"That can be crucial when the production is a documentary on an event that took place more than 100 years ago," says program director John Clark.

WHIO earned an Iris Award from the National Association of Television Programming Executives (NAPTE) and four regional Emmy Awards from the National Academy of Television Arts and Sciences for its 30-minute production of "Gettysburg: The Turning Point," a fast-moving, finely detailed portrayal of the Civil War battle, assembled almost entirely from old still photographs, engravings, and new artwork. These were copied on slides, 16 mm film, and videotape.

"Locally originated programming doesn't have to deal solely with local issues," Clark says. "Key events like the battle of Gettysburg affect everyone, and it is important to understand them in perspective. We originally focused on Gettysburg as a way of explaining the reality of war to a generation of children who were too young to understand the Vietnam war when they lived through it."

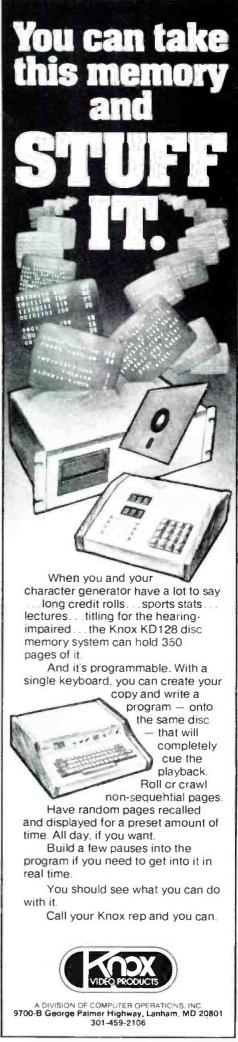

Coproducer Sam Ellis conceived the Gettysburg idea when his 14-year-old daughter posed some probing questions about Vietnam. Ellis, who has a strong interest in Civil War history, saw the well-documented Gettysburg battle as a perfect vehicle for explaining the mechanics of war. But he felt an examination of the famous confrontation would appeal to more than just children.

"We soon found that even a halfhour recreation of the battle could be prohibitively expensive. There are Civil War mock regiments available to stage battles, but the logistics would have been horrendous," Ellis points out. "In addition, we were looking for something different from the many You Are There-style Gettysburg portrayals that have been done."

#### **TV Programming**

Sam Ellis, who produced the graphics for the show as well as writing the script and serving as coproducer, discussas some artwork with one of the station's artists

John Clark (left) and Sam Ellis, coproducers, examine some slides on a light table

John Clark checks on the electronic editing steps of "Gettysburg: The Turning Point"

The slides were inserted into a holder on this copy stand and photographed individually on motion picture film, a frame at a time

Since there is an understandable shortage of "stock" film footage from the Civil War, Ellis and Clark decided to assemble the documentary from the extensive collection of photographic still material that exists from that period. Ellis began assembling non-copyrighted photos, paintings, and clippings from old newspapers. He wrote his script around this material, and then worked with the station's art staff to produce additional artwork to fill in the gaps.

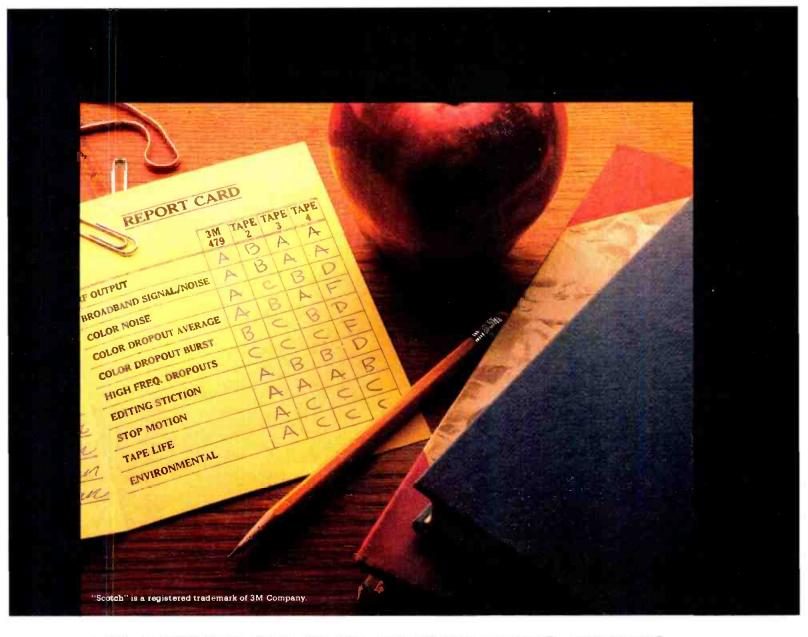

The first sequences to be filmed were

the all-important battle scenes. The stills were first copied on slide film using polarizing filters to eliminate reflections on shiny artwork. The slides were then transferred to 16 mm film, one at a time.

The battle scenes, each lasting about a minute, were each filmed on continuous lengths of film. Ellis wanted no splices to interfere with the rapid-fire effect of the changing images. Ellis planned in advance how long each slide was to appear in the footage. Exposures for the individual slides were also cal-

culated. A given slide might be exposed for six frames at f/11 and the next for 10 frames at f/8. John Hirschman and Greg Wright of the WHIO-TV photography department worked very closely with Ellis on this effort.

In all, eight battle secnes were filmed on Eastman Ektachrome video news film 7240 (tungsten). Ellis used a variety of techniques to produce the illusion of motion. Rapid slide changes — a few frames apart — were important. Frequently the same piece of art was used in segments — long shot, medium

# IN A TEST OF ONE-INCH VIDEO TAPES, WE ACED OUT THE COMPETITION.

When we tested the top four brands under strict lab conditions, the overwhelming performance leader was Scotch 479 Master Broadcast Video Tape. In fact, we came out on top in all ten performance categories.

If that isn't reason enough to make us your choice, maybe this is. We're the only one-inch supplier that winds your tape onto a special cushioned flange reel to protect against shipping and handling damage. And we pack and ship our tape in a flame-retardant case to give you even more protection.

We're the people who pioneered the development of video tape 25 years ago. And according to the pros who know video tape best, we're still the best video tape. Give or take an inch.

# THE **NETWORKS'** (AND EVERYONE ELSE'S.)

At Camera Mart, we've been a leading equipment supplier to broadcasters and producers for years. We're no strangers to the 'instant' needs, unexpected calls, tough standards and difficult operating conditions that are often S.O.P. in this rough-and-tumble business. But you probably know that...at least, when it comes to film.

What you may *not* know is, for the past few years, we've been quietly doing the same in video! Testing and selecting the leading equipment for performance and reliability. And offering a wide selection of production and post-production components and packages—on rental, lease and purchase plans with our customary flexibility.

But don't take our word for it: talk to our customers. You'll see why so many people the industry depends on. depend on us.

40 years of excellence

THE CAMERA MART, INC.

### TV Programming

shot, and finally a closeup - to focus attention on some element, such as a wounded soldier.

Maps prepared by the art department had animated lines to show the movement of the armies. Ellis says a big worry was how well the black-andwhite artwork would be reproduced on color film. Because the station is geared for color, shooting black-and-white slides and film would require more costly outside processing services. Ellis was pleased to find both the Ektachrome still and motion picture films excellently reproduced the black-andwhite artwork. Blacks had no color cast in the darkest areas, and whites had no off-tint.

The finished film was transferred to two-inch videotape for editing. At this stage, Ellis combined the film with other scenes, taking advantage of some electronic editing features. Cutout artwork of General Lee, laid against a blue chroma key card, was superimposed on slides of Gettysburg that Ellis had taken on a visit to the battlefield several years ago. Similar electronic techniques combined other slides with titles and studio shots of narrator Ken Jefferson. The program's only liveaction sequence was actor-director Ken Hardin's portrayal of Abraham Lincoln delivering the Gettysburg address at the end of the program.

As a result, the budget for the program was kept very low, Ellis notes. The production time was worked into the normal schedules of station staff

over a three-month period.

"Public response to the program was remarkable. It attracted many more viewers than we had expected," Clark says. "Part of the reason was the military interest on the part of many of our viewers who live or work near Wright-Patterson Air Force Base." Another reason, according to Clark, was the universal theme of the program. Clark feels that a show produced for a local market does not necessarily have to be artificially "localized" by the gratuitous insertion of a "we here in Dayton" perspective. First, WHIO serves an audience much larger than metropolitan Dayton. Secondly, that perspective can limit the appeal of the program.

A number of stations in other markets have expressed interest in airing "Gettysburg . . ." but details of just how the show might be made available to the stations remain to be worked out. Nevertheless, Clark said, "That demonstrates how a show originally conceived as a children's program can grow into something a great deal more without becoming an expensive proposition for the station undertaking it.

# \*Simulated pictures?

They're real.
But, if the printing press
made as good an impression as Conrac monitors make, you probably couldn't tell.

Conrac's clarity and color consistency are the result of years of experience and technological depth. We were designing and manufacturing monochrome broadcast monitors before the first late-night host delivered a monologue.

And ever since color television began, Conrac's Colormatch™ has been the industry

standard. Monitor to monitor, nobody's better at matching screen phosphors for identical color. What's more, nobody offers a larger selection of broadcast monitors. Only Conrac covers the entire spectrum.

And since we're committed to the professional side of television, your needs get our full attention. Engineering conveniences like front-pull drawers for access to critical controls are standard on all Conrac color monitors. Modular construction assures fast servicing, too.

Be sure to call or write for a Conrac Broadcast and Teleproduction Catalog. It features all our monitors, including the incredible Model 6100 with beam current feedback, independent convergence control and optional comb filter.

See why we still outsell everybody else six to one. Conrac Division, Conrac Corporation, 600 North Rimsdale Ave., Covina, CA 91722, Tel. (213) 966-3511, Telex: 67-0437.

# THE FULLY-AUTOMATIC STUDIO CAMERA. IT CAN AUTOMATICALLY SAVE YOU SET-UP TIME.

Think about the time it takes to set up studio cameras.

Think about standby time for talent and production crews waiting for your technicians to get the best picture quality.

Think about the savings if that time could be reduced from hours to minutes—or seconds.

### The TK-47. The world's first fully-automatic camera.

The TK-47 studio camera performs sequential set-up functions automatically—at the touch of a button.

And it does it in a matter of seconds, rather than requiring the usual hour or two for conventional studio cameras.

Daily performance checks are also done automatically. And with

AUTO

a Set up Control Unit, any number of TK-47's can be controlled—with truly consistent color rendition.

You get better utilization of technical people, a smoother operation, quicker problem-solving.

### Inside the TK-47: RCA technology at its finest.

The TK-47 is filled with state-of-the art technology. Extensive use of LSI's and digital memory circuits, for example. And we've eliminated troublesome potentiometers.

Everything in the TK-47 is designed to increase reliability, reduce downtime.

### Automatically backed by RCA, and TechAlert.

Cost-effectiveness in a studio camera, or any other piece of equipment, depends on many things.

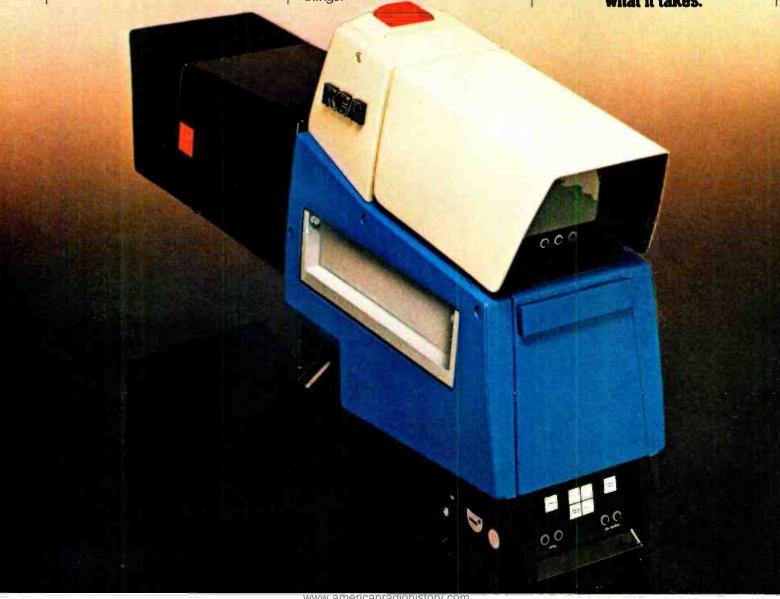

Quality. RCA has a reputation that can't be matched for reliable, enduring products and systems.

Service. Famous TechAlert service, and RCA parts support, can add years to the life of your equipment.

See your RCA representative, or write for details. RCA Broadcast Systems, Building 2-2, Front & Cooper Streets, Camden, NJ 08102.

Cost-effective broadcasting: we make what it takes.

## WRBR: 20th CENTURY TECHNOLOGY IN A 19th CENTURY BUILDING

By James M. Lies

When WRBR, South Bend, Ind., decided it needed to expand, it found a 125-year-old brewery fitted the bill aesthetically and economically. It proved technically advantageous, too.

STUDIO BUILDINGS need considerable immunity from noise and vibration. We found that the brick walls and concrete floors of the 100 Center, a former brewery which had already been converted into shopping, dining, and office space, provided the best isolation that could possibly be hoped for in an already-existing structure. The building's convenient location within the community and its pervasive charm (the oldest section was built 125 years ago) made it an ideal location for a radio station.

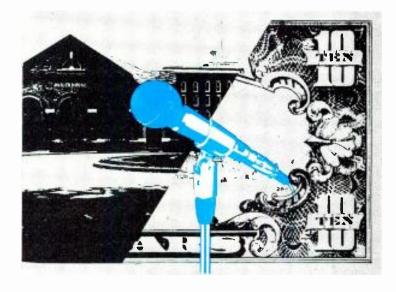

The building, which was to house the station's entire operation (both studios and offices), also offered the advantage that it was not situated near any industrial plants and was recessed some 500 feet back from the main traffic thoroughfare, further isolating it from noise and vibration. Two already-existing heat pumps were adequate for the anticipated heat load (with the addition of some ductwork) and would be capable of wintertime heating without difficulty. Adequate ac power was available for our use.

Our plans called for maximizing the large floor space, which was interrupted only by two brick walls running the length of the area and supporting the floors above. We needed offices for eight management-level people, the sales department, disc jockeys for our Top 40 format, and a receptionist, plus a lobby and three studios. By grouping the office manager, traffic, and continuity in one area, the general manager, sales manager, and sales people in another, and locating programming and engineering near the operating areas, we found we had space left over for a large conference room and a vending machine/refreshment lounge.

### Wiring made use of existing race

Wiring commenced with the start of inside carpentry. The air monitor went in first because it would be partially routed through the walls and ceilings. Fourteen speakers were located on the floor plan and a "backbone" was laid to distribute the audio. The speaker volume is individually controlled with T-pads and limited with resistors which bridge the backbone. The system is fed at about 1.2 ohms and works extremely well. I estimate the savings over having installed a 25 volt distribution system at about \$300.

James M. Lies is chief engineer of WRBR-FM.

Inter-studio wiring and lines leaving the building were laid next. Enough of these were planned to cover both current and future needs, with spares installed where feasible. The spare remote control line, for example, was backed up with an eternally vigilant security alarm; the line can be disconnected from the alarm when needed for emergency remote control. Outside lines are terminated near the telco board location.

The east wall, running by the studios, had a large existing floor-level race formerly used for ac distribution. It was too convenient to pass up! We dropped a large bundle of inter-studio level audio lines into it, along with the station ground strap, dc, intercom, and remote control. Audio was kept near the top; new ac conduits and the telephone lines were kept with the old ones at the bottom with RF for RPU, public service, and two-way radio. When lines of dissimilar purpose had to cross, they did so at right angles to minimize pop and hum pickup. The race was then tightly packed with insulation where it left each studio. Wiring that stayed within a room was kept inside the studio furniture so that no equipment racks were required.

### Staggered-stud wall construction

Walls surrounding studios were of double-frame, staggered-stud construction with insulation blankets

### WRBR

The newsman can see any cues, time, even the weather from this vantage. During news, he will run his own voice inserts, mic level, even the commercials

WRBR's control room/main studio was designed for convenient remote operation off all equipment

woven between frames. Inner and outer walls were never allowed to contact each other directly. The frames were covered with ½-inch sound board, then drywall. The existing brick wall (forming the east wall of each studio) and the 2x14-inch beams holding the west wall helped keep vibration down, though the brick wall did have a slight tendency to pass vibration from the heat pumps on its other side.

The window between the control room and the newsroom proved a bit problematic. Because of the required viewing angle and the small size of the wall, we were unable to make the two pieces of glass very dissimilar in shape. The result was that the window became resonant and voices could be heard distinctly through the window. The solution was to choose two different thicknesses of

While rigging the (tapered) chimney for hoisting heliax, riggers have to climb what feels like the wrong side of a ladder 165 feet, in the dark

glass and to mount them in such a way that the inner and outer walls did not contact each other through the window frame. This kept the resonating frequencies of the pieces of glass distinct and severely reduced their transmission.

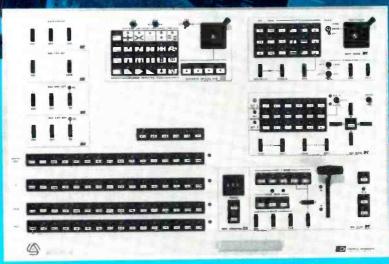

Ceilings were built on sound board with insulation laid above. Both tile and dropped ceilings were used. This helped maintain the 2½ dimension ratios in the control and production rooms despite differing ceiling joist sizes. Solid core doors with weatherstrip made a quiet entry for each studio. Air conditioning was brought in and out by fiberglass ducts which *completely* remove blower and duct noises as well as maintaining room-to-room isolation.

With the exception of the newsroom, which had to be narrow to accommodate the news director's office, studios were planned to keep resonance from being reinforced. Reverberation time initially was planned to be a little than normal due to our plan to use cardioid microphones; later, anticipating the eventual heavy use of audio processing, we cut reverberation time shorter than normal. The rooms were sized and surfaced identically where possible so that an on-air live personality does not sound too different from a prerecorded tape.

### Flexible studio design

The facilities are extremely flexible. Each operating area is self-sufficient, and each is fully backed up. The production room is an emergency control room and also an extra newsroom. Commercials can be produced in the newsroom. Any of the studios can be put on the air directly if convenient or necessary. The embarrassment of a console or power failure in the newsroom during live newscasts can be overcome by plugging a microphone into a wall plug connected to the control room console. Public affairs, handled by the news department, often

### compact, competitive and powerful

The power of the CD-480-4 plus its compact size and price make it the professional choice for medium size studios, post production suites and mobile vans.

**Powerful:** includes the unique CD-480 SFX amplifier that permits you to control 4 video signals, in any combination, with one fader handle, plus a wide range of powerful CD-480 modular options.

compact: 24" wide panel and 21" of rack electronics.

**Price:** Also compact and competitive... ask us.

Floor plan. The thickest walls are the existing brick barriers. Square representations in the wall sections near the top are large wooden posts supporting ceiling beams and the floors above

requires interviews; these can be conducted in the news room. news director's office, or in the conference room when there are a large number of guests. The newsroom's recorder is generally used, but Production can also tape a program originating from any of these locations. The newsroom has an unusually high number of speakers; "mute box" quiets all of them in the presence of any live mic.

### STL/remote transmitter operation necessitated

Since the 100 Center could not house a transmitter, plans for an STL and remote transmitter facility were made. On a map I drew an arc that included sites from which we could provide a city-grade signal to South Bend, and a "preferred region" to deliver this signal to as many suburbs as possible. The map indicated two possibilities. One, on the highest terrain, unfortunately did not offer us coverage of a well-populated portion of our Metro Survey Area. We therefore went with an area with the second highest average terrain level AMSL.

Having chosen a transmitter site, we could establish the STL site. The 100 Center would not accommodate a tower tall enough to get an STL signal to the transmitter free of Fresnel effects. The only site in the complex high enough for the job was the old Boiler House chimney which, fortunately, was no longer contributing to air pollution. We installed the heliax inside and up through the chimney cap to a single antenna mounted on the side of the structure. The STL transmitters were housed in a projection booth of the theater into which the boiler room had been converted. This provided a secure but accessible STL location as well as a short coax run.

The remaining project at the studio end of the hop was to route audio and remote control from the studio 450 feet to the projection booth. Conventional audio line would roll a 600 ohm feed off nearly 3 dB at 15 kHz! We could

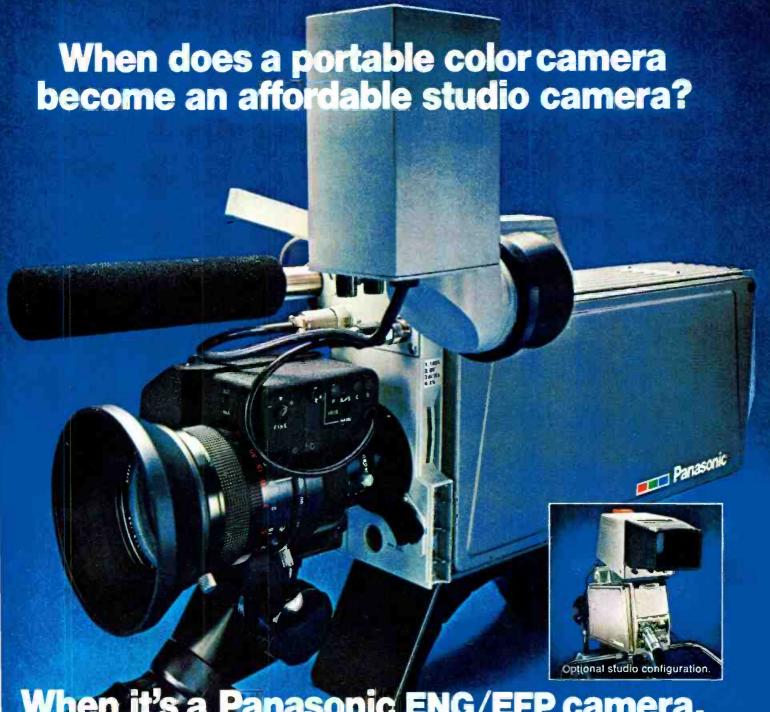

feed the cables at 150 ohms, of course, but to maintain a flat response down to 30 Hz requires fairly costly transformers. Further, there is always the phase shift problem. Low-capacitance audio cable was my solution. Two audio channels and one combination remote control/carrier status indication line were installed. The high frequency drop measures less than .25 dB at 15 kHz. The STL transmitters are housed in a home-built box similar to a short equipment rack, with a fan installed in the top rear and a sliding plexiglass cover locking the front.

The transmitter building was constructed of concrete block and has an insulated frame roof. The blocks and floor were sealed after construction to prevent concrete powder from contaminating the equipment. The transmitter provides much of the building's winter heat; in summer, ridge vents and a thermostatically-controlled fan exhaust this heat. Vents near the floor provide inlet air.

When the concrete floor was poured, an electrical trough was laid under the site for main and auxiliary transmitters and equipment rack. This same trough can service any future racks for example, equipment using leased tower space. The equipment installed allows remote control of transmitter changeover. Hardware welded onto pipe sections which support a four-inch conduit forms a transmission line carrier capable of protecting lines to the tower from falling ice and, we hope, from agile tresspassers. The carrier and lines pass through the barbed wire topping on the tower fence. We designed an infrared alarm to advise studio personnel of anyone climbing the tower. Finally, the guy anchors have tall fences topped with barbed wire, tipped outward, protecting them.

With some planning, foresight, and a measure of luck we have created a broadcast plant in interesting surroundings which has received critical acclaim from other broadcasters, advertisers, and lay people in the community.

BM/E

## Panasonic ENG/EFP camera.

Now you can stop admiring ENG/EFP color cameras, and start owning one! The surprisingly affordable Panasonic AK-750. Thanks to its impressive list of options, our three-tube Plumbicon®portable camera doubles as a studio camera.

In the field it's a fully self-contained portable camera that weighs only 20 lbs. (with our optional 12:1 zoom lens shown), so it's easy to handle. It's just as easy on the power, using only 23 watts. You can interface the AK-750 with any EFP system, because it can be externally synchronized with a single cable. Timing and phase adjustments are built right into the camera head. Or connect it to any studio system, simply by adding the optional Remote Control Unit and studio viewfinder.

Indoors or out, you can look forward to impressive performance: With an S/N ratio of 49 dB, and horizontal resolution of 500 lines center at the recommended illumination of 200 footcandles at f/4. There's even a +6 dB gain for a minimum illumination of just 15 footcandles at f/1.8.

Some impressive circuitry was built into the camera: like a YI/Q encoder, an RS-170A sync generator with enlock for studio or EFP use, and a color bar generator. It also features an optical black, and automatic white balance. And there's electronic color conversion, as well as a filter wheel behind the lens.

Horizontal and vertical blanking are both adjustable to meet a variety of recording or playback requirements. And your picture is always crisp and clear thanks to horizontal aperture correction and 1-line vertical aperture correction built right into the camera head.

Not only do you get a long list of standard features with the AK-750, there's also a long list of camera options available. Such as 2-line vertical aperture correction, a chroma key unit, and more.

So if you're pricing both studio cameras and portable cameras, price one camera that can do both. The Panasonic AK-750.

Plumbicon is a registered trademark of N.V. Philips of Holland for TV camera tubes.

THE PHASE-ERROR-FREE CART PRODUCTION CENTER

(Demos now. deliveries Jan/80)
PhaseMaster: Phase-error-free record/reproduce/duplicate full complement of broadcast features and construction

MA Series: Studio monitors: 12 W mono. 20 W stereo: 10 Hz-50 kHz±1 dB; distortion 0.05% max: \$121 and \$171.

### MIC/LINE/STUDIO AMPLIFIERS:

mono. 5 stereo ch.; solid-state balanced and unbalanced inputs: +21 dBm max. in and out; response 10 Hz -50 kHz +0. -1 dB; distortion 0.008%: \$135 to \$453.

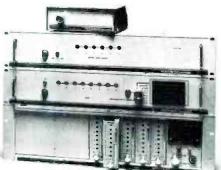

Mic/line inputs: studio or remote: \$128 to \$185.

DML Series: Dual mic in to amplify, mix, limit and control gain; built in compressor; AC and DC: \$239 to \$281.

### AUDIO ROUTER/AMPLIFIER ARA-1612: Up to 16 in, 12 out; LED status display: \$1099 to \$2296.

Prices subject to change without prior notice.

TURNTABLE PREAMPLIFIERS MP-8 & SP-8: Mono & stereo; S/N -77 dB; ±1 dB RIAA: \$98 & \$144. ESP-38: 0.03% distortion; S/N -85 dB; ±,25 dB RIAA: \$325.

AUDIO DISTRIBUTION AMPLIFIERS
DA Series: 12 versions from 1 x 30 mass feed to 20 x 80 rack mount: 20 Hz to 20 kHz±0.5 dB; -75 dB separation: \$145 to \$2276.

\*You can use any of the gear you see free for 2 weeks (with credit approval prior to shipment).

Play with the cart/cassette record/playback/duplication center that eliminates stereo phase shift error once and for all. The most advanced turntable preamp in captivity. Consoles so advanced, so silent you're not going to believe them until you try them. Or an audio router that makes whatever you've got now look—and sound—like so much spaghetti.

Then, if it's not for you, just ship it back.

But in all fairness, we have to warn you—once you've tried Ramko, chances are you're hooked for life.

### Phase shift doesn't matter in mono.

So instead of adding failure-prone electro-mechanical components or re-inventing the cartridge, in the Ramko PhaseMaster Cart/Cassette Duplicating Center, we simply encode the stereo before it ever sees the heads or tape, then decode the signal after it leaves these two major sources of stereo phase shift error.

The result is phase-error-free recording/reproduction/duplication, and performance specifications that meet or exceed whatever cart drives you're using now.

Features include: an A and B cart deck; an A cart deck; and a cassette deck. Simple cassette-to-cart(s) and cart-to-cassette duplication. Automatic switching of record/playback, encoding/decoding and mono/stereo. Left, right and phase analysis meters. Front panel input selection. Three cue tones. And so much more that you'll just

have to contact us for details and a demonstration.

Ask for the Ramko PhaseMaster.

### Just another turntable preamp?

Look at what one user wrote: "Three days ago I replaced the (brand name) preamps in our studio with your ESP-38 preamps."

"The result was astounding. The next day we had six unsolicited calls from local stereo stores. All commented on our improved disk reproduction and wanted to know what we had done."

"The comments from listeners have been excellent."

Try it. You're going to like it a lot.

### For AM stereo, or an FM station upgrade.

Ramko consoles come with features you won't even find in more expensive competitive units.

Total dc control of all mixing and switching function means no more noisy pots and switches, no stereo tracking error, and much more resistance to RFI.

We've developed solid-state balanced inputs for better sound. Added gain select on each input. Included switch-programmable cue and monitor mute selection. Provided mono, stereo and phase meters as standard features.

And then we backed everything with a 2-year warranty (4 years on the DC-38 and DC-12).

### Kiss your patch panels good-bye.

Because with the Ramko ARA-1612 Audio Router/Amplifier you use front panel pushbuttons to route 16 inputs to any of 12 outputs, simultaneously or individually, with an instant LED display of what is going where. You've never seen anything like it.

IC switching and isolation buffers mean no loading and no degradation of S/N or frequency response with multiple feeds (stack them for up to 45 in and thousands out). On-board switches change stereo to mono instantly. Individual gain control on all inputs allows precise level matching. Frequency response is 20 Hz–20 kHz±0.5 dB; S/N is -75 dB; distortion <0.3%; and input/output levels are +21 dBm max.

And all this is yours at the lowest cost per crosspoint in the industry.

### The music goes 'round and 'round...

For moving sound around, we offer more different kinds of amplifiers than anybody.

Ten models of Audio Distribution Amplifiers, each with  $10~Hz-20~kHz\pm0.5~dB$  frequency response, less than 0.1% distortion, and more inputs and outputs for the size and price than any other comparable ADA.

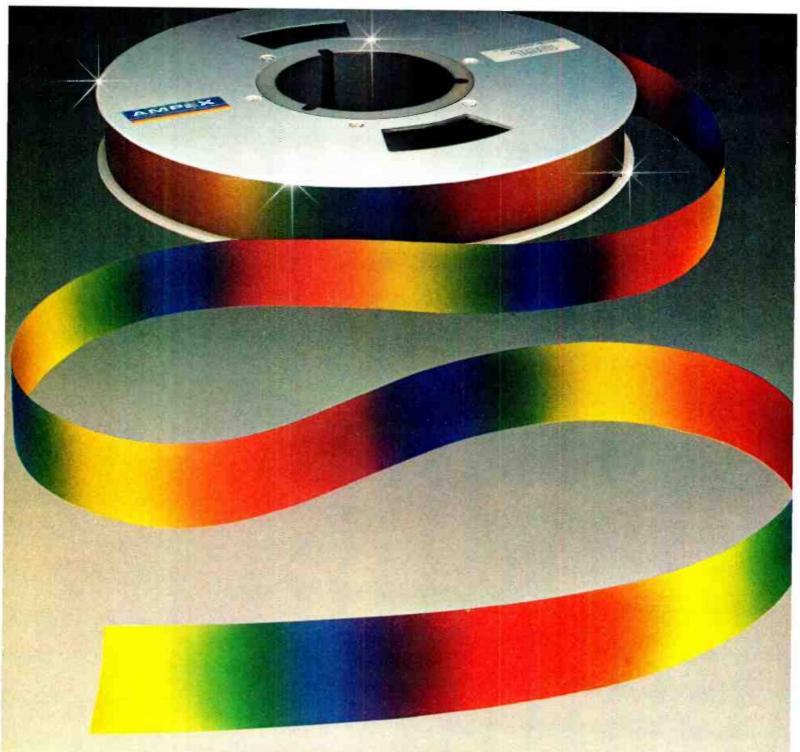

Four different Line Amplifiers with 20 Hz-50 kHz+0, -1 dB frequency response, 0.008% distortion, balanced in and out, and +21 dBm max out.

Portable and studio dual function MIC/LINE amplifiers with balanced in and out, built-in RFI suppression, 20 Hz-20 kHz±0.5 dB frequency response, gain from 64 dB on MIC to 26 dB on the high level channels, and distortion at an inaudible 0.1%.

And isn't that music to your ears? To hear more, contact: Ramko Research, 11355 Folsom Blvd., Rancho Cordova, CA 95670.

Or just call (916) 635-3600 collect today.

Brains, not brawn.

# STATE OF THE ART

AMPEX 196 SERIES BROADCAST I"HELICAL TAPE

This is the tape Ampex had to design to demonstrate the fantastic capabilities of our VPR-2, the machine that is revolutionizing professional video recording.

With Series 196, color brilliance is preserved and signal-to-noise ratio is unaffected even after multiple playback passes, lengthy still framing and heavy post-production editing. This tape is the ultimate match for the VPR-2—a brilliant combination

that is unsurpassed in today's video recording industry. Available in SMPTE Type "C" or "B" formats. 34 min/66 min/94 min.

Contact Ampex Corporation, Magnetic Tape Division, 401 Broadway, Redwood City, CA 94063, 415/367-2011.

OFFICIAL SUPPLIERS VIDEO RECORDERS AND MAGNETIC TAPE XXII OLYMPIAD

# REHAB TAX BONUS

By Mark E. Battersby

If you're considering expansion, renovation, or upgrading your facilities, Uncle Sam has promulgated some tax laws that make older structures a wise prospect for rehabilitation.

HAVE YOU EVER given any thought to profiting from your silent partner — the United States government? It should not come as any surprise to learn that Uncle Sam has, for years, picked up the tab for 10 percent of your new equipment purchases. But did you know that now that same investment tax credit also applies to the costs of fixing up your station and studio?

That's right — effective October 31, 1978, you could reduce your firm's tax bill by 10 percent of any sums spent rehabilitating an old building. And, what's more, the same Revenue Act of 1978 also contains special rules helping clarify other types of property that can qualify for the investment tax credit, thereby making it easier — and more profitable — than ever to use the investment tax credit on your next tax return.

First, the new law now permits you to claim the investment tax credit for rehabilitation expenditures incurred in connection with any building — office, warehouse, transmitter building, or studio — that has been in use for over 20 years. What's more, you or your company do not even have to own that building in order to claim this investment tax credit. Since the credit is based on 'rehab' expenditures, even tenants are eligible.

Specifically, the new rules state that any physical rehabilitation must commence at least 20 years after a building is placed in service in order to qualify for the credit. Thus, you may claim the investment credit for rehabilitation expenses only once every 20 years for any particular building.

We all know that buildings and their structural components do not qualify for the investment tax credit, although their costs may be recovered through depreciation. However, with the addition of this new rule, it is now possible to reap a bonus equal to 10 percent of the cost of rehabilitating your studio or even converting another old building into a facility to accommodate your growing activities.

The principal restriction here prevents you from rehabilitating any residential buildings. It is the ultimate use

Mark E. Battersby is a Tax & Financial Consultant specializing in broadcast operations. He works in Ardmore, Penn.

of the building, however, which determines whether it qualifies for the tax credit. In other words, you may convert a house into a studio or an apartment building into something more suitable to your operations and still qualify for the new credit — but not vice versa.

If more than 25 percent of a building's walls are replaced, it is not considered to be rehabilitation under the new law. But this limitation does not apply in situations where existing walls are merely covered with new siding as part of the general rehabilitation. Nor does it apply if remodeling results in more than a 25 percent increase in the floor space of your studio building.

Along the same lines, the costs of acquiring a building or even acquiring an interest in a building are still not considered to be qualifying expenditure, nor are the costs incurred for other facilities such as parking lots. Completing a new building after it has been placed in service will not qualify for the credit either.

### **Rehab Tax Bonus**

Generally, the rehabilitation of any building, factory, or warehouse will include renovation, restoration, and reconstruction expenses. Thus, interior or exterior renovation or restoration that helps extend the useful life of your studio, upgrades its usefulness, or aids in perserving it, qualifies for the tax credit. Other capital expenditures for the replacement of plumbing, electrical wiring, flooring, permanent interior partitions or walls, and the heating and air conditioning systems (including temperature control systems) would also qualify as rehab expenses when incurred in connection with a rehabilitation.

Anyone who has ever looked at our present tax law knows how difficult it can be to classify some items as either "tangible personal property," which is eligible for the investment tax credit, or as "structural components"

According to some experts, an old building can be purchased and rehabilitated for only 70 percent of the cost of a new building constructed today. Based on a new building life of 50 years, the following illustrates the effect on the average tax return: New 25-Year Building **Old Building** 30,000 Cost 100,000 Renovations 40,000 100,000 70,000 First Year Actual out-of-pocket expenses 25% down payment 25,000 17,500 Balance financed at 12%/20 years first year repaid principle and interest. 9,585.72 6,936.84 TOTAL 34,585.72 24,436.84 First year write-off Depreciation (straightline, no salvage 2,000.00 2,800.00 value) Interest Expense (Avg. over loan period) 5,836.92 4,311.84 Investment tax credit (value at max. corporate tax rate) 8,333.00 7,836.92 15,444.84 **Net Out-of-Pocket** First Year Expense 26,748.80 8,992.00 New 25-Year Building **Old Building** Subsequent years: **Debt Service** \$ 9,585.72 \$ 6,936.84 Write-off Interest expense 5,836.92 4,311.84 Depreciation 2,000.00 2,800.00 7,111.84 7,836.92 Net Out-of-Pocket Expense 1,748.80 (175.00)

of a building, which are ineligible. When connected with qualified rehabilitation, however, these classification problems are virtually eliminated because they are eligible for the new credit either way.

In addition, expenditures for the removal of existing interior walls, plumbing, electrical wiring, flooring, etc., would qualify for the rehab tax credit as long as they were incurred in connection with the actual rehabilitation of a building. They must, of course, be treated as capital expenditures for property and have a useful life of at least five years.

This does not mean that all rehabilitation expenses must automatically be lumped together to qualify for the investment tax credit. If your tax strategy is sufficiently sophisticated to permit you an accelerated tax write-off of any specific rehabilitation expense as some other type of expense, you are free to choose the path that will benefit you the most.

However, qualified rehabilitation costs are to be treated as incurred for new property and, therefore, not subject to the \$100,000 used property limitation — except when such costs are for property (such as used elevators) which otherwise qualifies for the investment credit. In other words, those rehab costs which were denied the tax credit under the old law qualify as "new property" with the accompanying higher ceilings on the amount which may be claimed. Items which were eligible for the credit prior to the rule change but which may be a part of your total rehabilitation bill will, under these rules, still be subject to the ceiling for used property — if they actually are used.

The law now permits you to claim the investment tax credit for expenditures for renovation, restoration, or reconstruction of a 20-year old building as long as the actual rehabilitation has at least a five-year useful life. However, to exclude relatively minor repairs or improvements, the costs upon which this credit is based must be capitalized (and not deducted as current expenses) on the tax.return.

In actual practice, qualifying rehab expenses will be eligible for a two-third investment tax credit if the improvements have an estimated life of five or six years, and a full amount when the useful life is seven years or more. The so-called 'useful life' is, naturally, the same period used for depreciation purposes.

Obviously not everyone occupies a building that is more than 20 years old or will want to renovate it if they do. That doesn't mean that they should neglect the many advantages of the investment tax credit, however. After all, what other area of our tax rules allows you to actually pay out only 90 cents for every dollar in equipment acquired?

That is the actual out-of-pocket effect of the investment tax credit both before and after the passage of the Revenue Act of 1978. You purchase qualifying equipment and depreciate or write off its entire cost on your tax return over the years it is in use. Plus, as a bonus for helping the economy by acquiring that property, our lawmakers will allow you a special amount in addition to the regular and first-year depreciation allowances equal to 10 percent of that property's cost.

The new rules allowing the investment tax credit to be claimed based on rehabilitation expenditures are pretty clear-cut. Unfortunately, in the past many people tended to shy away from the credit because they were not always certain whether specific types of property qualified. Most of that confusion has now been resolved with the inclusion of special rules in the new tax law that help clarify just

Until now, using a wireless microphone system meant sacrificing the quality of the sound in a trade-off for portability.

No more.

Sony has engineered wireless microphone systems as portable and versatile as any on the market.

But with a very big difference. Excellent sound.

To begin with, Sony offers a wider dynamic range than any other wireless system, a range of 96 dB. This accommodates sound pressure levels up to 130 dB. (While most other wireless systems have limiters which hold their dynamic range to, at most. 75 dB. Sony engineering has produced a system that requires no limiters.)

So what goes into the microphone comes out again at the same sound level. And nothing takes away from the includes a tiny lavaliere mike, a transthrill of performance.

What's more, audio distortion is less than 0.1% and signal-to-noise ratio is better than 57 dB (both  $\pm 2.4$ kHz deviation, at 1 kHz).

And the new Sony systems are virtually drift-free. Frequency stability is an amazing  $\pm 0.005\%$ .

Furthermore, Sony wireless systems are available with up to 14 channels in UHE which means that interference from other sound sources is much less likely than at lower frequencies.

And while many wireless systems are put together with a mixture of components from several manufacturers, Sonv uses only one: Sony.

So we've been able to create fully integrated systems that offer you a wide variety of options.

For EFP and ENG, Sony's system mitter about the size of a cigarette

pack and a tuner smaller than a paperback book.

The system also comes with a shoulder-strap antenna and a leather carrying case. Altogether, it's compact and efficient and offers outstanding

For studio and stage use. Sony has a modular rack-mounted system that can be engineered in any combination you want, from single-channel to multi-channel diversity reception.

It can be portable or fixed, and runs from 110 volts AC or 24 volts DC.

For more information, call Sony Professional Audio Products at (212) 371-5800, extension 143 or 145.

You'll find out that no other wireless systems sound as good as Sony's.

We've never put our name on anything that wasn't the best.

Circle 135 on Reader Service Card

### **Rehab Tax Bonus**

which items do and do not qualify for the investment credit.

For example, we've already mentioned that buildings and what Congress calls their "structural components" do not qualify. But where do you draw the line with those so-called "structural components"?

Under the newly clarified rules, the investment tax credit may be claimed for special lighting (including lighting to illuminate the exterior of a building but not lighting in parking areas). False balconies and other exterior ornamentation that have no more than an incidental relationship to the actual operation or maintenance of a building also qualify.

Identity symbols that identify or relate to a particular station such as materials attached to the exterior or interior of a building and signs (but not billboards) are now specifically eligible for the investment tax credit despite the Internal Revenue Service's earlier protests to the contrary.

Similarly, floor coverings which are not an integral part of the floor itself, such as floor tile installed in such a manner that it can be readily removed (that is, not cemented, mudded, or otherwise permanently affixed to the floor) qualify for the tax credit. In addition to those tiles applied with an adhesive designed to ease their removal, carpeting, wall panel inserts (such as those framing pictures of your advertisers' products), ornamental fixtures, artifacts, removable partitions as well as large and small pictures of scenery, persons, products, and the like which are attached to the walls or suspended from the ceiling all are exempted from classification as structural components and qualify for the credit under the new clarification.

You should beware of the principal drawback to claiming the investment tax credit, however. Whether investment credit property covered by the clarification or the newly added rehabilitation expenditures, you may be required to pay back or 'recapture' that credit if you later dispose of the asset before the expiration of its originally estimated life.

For instance, if you reduce next year's tax bill by 10 percent of the \$3,000 you spent rehabilitating your studio after the passage of the new credit and dispose of the building during 1980 — you owe that entire \$300 to the IRS. Even worse, it will be added directly to 1980's tax bill rather than to taxable income.

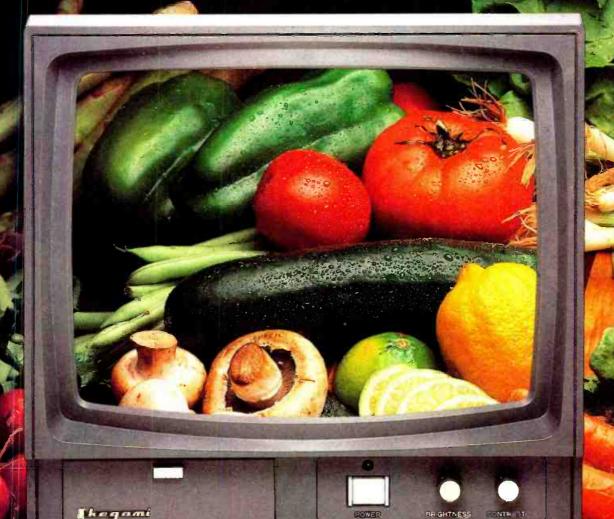

Remember that those rehab expenditures must have a five-year life in order to qualify for the credit. Sale or other disposition before the end of the five-year period means the entire credit is "recaptured." Disposition of an asset with a life you originally estimated at seven years after only six years means repayment of one-third of the credit already used to reduce your tax bill.

When it comes to investment credit property other than rehab expenses, all of the credit is recaptured if an asset with a seven-year life is disposed of before three years; two-thirds of the credit is added to your tax bill if disposed of after three or four years and one-third recaptured if the actual life turns out to be only five or six years.

Despite this slight amount of risk — easily minimized with a little planning — the investment tax credit is now easier (and safer) than ever to use. And, for the first time, you may claim the tax credit for rehabilitating your studio.

# IT'S A \$3 SATICON

When you're the world's first \$10,000\* three tube saticon camera, it's hard not to get carried away.

But price alone isn't our only

breakthrough.

The revolutionary XC-530 features remarkable reliability. Reliability that comes from our bias lighted three-tube bonded block design that eliminates mechanical registration adjustments. Which eliminates costly set-ups

SHARP'S UNIQUE 3-TUBE BONDED BLOCK DESIGN.

and down time—a problem common even to the most expensive

cameras, especially after rough ENG/EFP assignments.

Sharp's new XC-530 can be externally driven or used with our gen lock option, allowing you to lock up to any existing system. The XC-530 accepts standard C-mount lenses, including our optional 10:1 auto iris power zoom lens.

Why else would you want a \$35,000 camera

for \$10,000?

For its sensitivity, high S/N ratio, excellent colorimetry and low power

consumption. The only way you could possibly tell the difference between this

saticon camera and one costing three times its price would be on electronic test equipment. And our new

saticon studio camera, complete with CCU (Sharp's XC-500) delivers

the same high quality as our portable model.

So take the Sharp challenge and see if the difference is worth the \$25,000 difference. We're betting it isn't.

# TELEVISION DEMODULATOR PROOF-OF-PERFORMANCE

By John Price

With so many variables affecting off-air signals, a firm confidence in the demodulator is fundamental. Here are some recommended procedures for establishing the quality of performance provided by your demodulator.

Author's note: Since submission of the original manuscript, a new test generator (Tektronix TSG-6) has been obtained that simplifies procedures with the special test signal described in this paper. The new generator also provides an amplitude and phase-modulated multiburst which reduces somewhat the indicated bandwidth of that test signal. When using generators of this kind for demodulator calibration, it is still appropriate to employ the full line special test signal instead of multiburst.

ONE OF THE MOST perplexing problems facing television station operators is the accurate measurement of transmitted signals. Anyone charged with the duty of adjusting transmitters on the basis of observed waveforms will attest to that fact, after attempting to analyze the reasons for some fairly large differences in demodulator performance. Typically, these variances are non-trivial when comparing one demodulator with another. These uncertainties have been added to real discrepancies expected due to path differences in field measurements, differences as measured in each line of two-line antenna systems, or with the transmitter connected to a dummy load — but that is another story. Here we are concerned strictly with discrepancies attributable to the equipment used to make the measurements.

At KVOS-TV, it was decided to try calibrating the new Tektronix 1450 demodulators with what we felt were more direct methods than those usually employed. First, vast differences were noted between the 1450 demodulator video frequency response and that shown by the spectrum analyzer. Second, there were great differences in depth of modulation, using chopper reference in the various models of demodulators. We were curious to see which (if any) was correct.

It should be noted that the following procedures, developed for demodulator proof-of-performance, are universally applicable to various types and models of demodulators and test equipment.

### Frequency response

The spectrum analyzer is a very broadband device and might reasonably be expected to provide a stable calibration reference for carrier and sideband energy. For the

John Price is chief engineer of Wometco subsidiary KVOS-TV, Bellingham, Wash., serving northwest Washington and British Columbia.

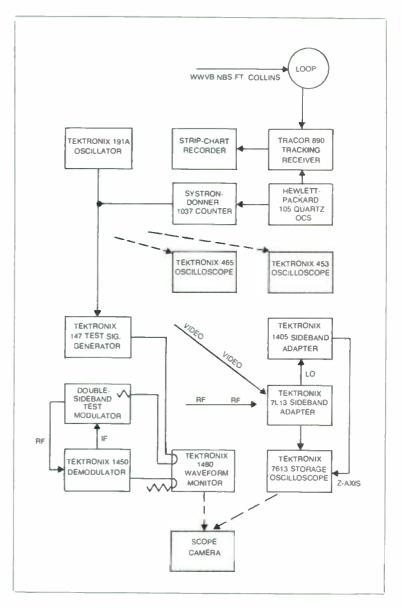

Figure 1. The block diagram shows the test setups used for the demodulator proof of performance

particular analyzer used in these tests, the station's Tektronix 7L13/7613, this was confirmed by calibration at the Tektronix factory where the response was measured to be within 0.2 dB across channels 11, 12, and 13. Lacking the means of confirmation in the field, we have been obliged

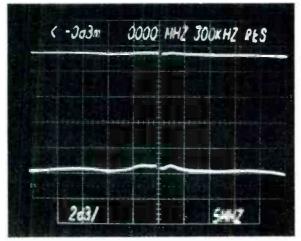

Figure 4. Spectrum display of video baseband (1405 sideband adapter)

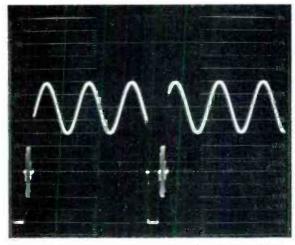

Figure 5. Special test signal full line/full field 50 kHz

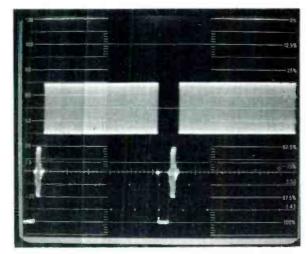

Figure 6. Special test signal. Full line Ifull field. 5 MHz

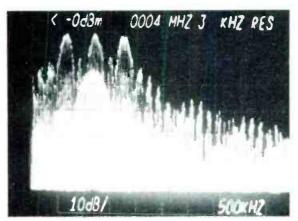

Figure 7. Multiburst baseband spectrum including the last three bursts (3.0. 3.6 & 4.1 MHz). Spurious above 4.1 MHz.

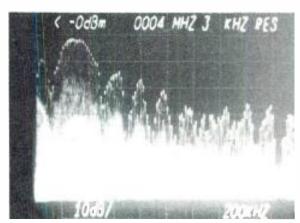

Figure 8. Multiburst as above 200 kHz division

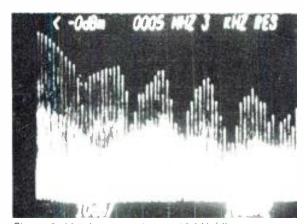

Figure 9. Multiburst as above 100 kHz/div

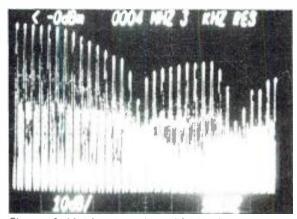

Figure 10. Multiburst as above 50 kHz div

Figure 2 was made using the 7613 storage oscilloscope in single-sweep/store mode, 2 sec/div. A toggle switch was connected in the Z-axis circuit to allow manual blanking at the visual carrier on all except the final sweep. Base-line clipping was employed to further reduce blooming effects. Figures 3 and 4 used the 7613 in the same way, except that only two sweeps were made; one each for 2 dB/div. and 10 dB/div. Figures 11, 12 and 13 are purposely overexposed to show the faint but significant sidebands situated approximately 550 kHz each side of color subcarrier.

to accept this calibration, realizing of course that much depends upon the accuracy of these factory measures. We will assume that their signal generators have been calibrated to a very fine degree.

Figure 1 is a block diagram of the test setups. First, we need to compare the 191 oscillator/test modulator with the 7L13/7613 spectrum analyzer. Figure 2 shows upper and lower sideband voltages, as seen on the 7613, for modulation frequencies every ½ MHz between ½ and 5 MHz. The vertical scale is 2 dB per division, and the horizontal scale is 1 MHz per division. The 147 video output is also being monitored, using a 1480 waveform monitor and Model 465 and 453 wideband oscilloscopes. No deviation from flatness could be observed, indicating that the 1480 system will give an accurate measure of response to at least 5 MHz. Additional observations indicate this particular 1480 exhibits flat response to approximately 20 MHz with a gradual roll-off to approximately 40 MHz.

Figure 3 shows upper and lower sideband voltages (as seen on the 7613) for a modulation frequency continuum from zero to 25 MHz. Z-axis markers are shown at 10 MHz. Modulation is provided by a Model 1405 sideband adapter, which generates a video sweep signal, synchronized with the spectrum analyzer sweep. The upper trace is 10 dB/div. and the lower trace, 2 dB/div.

Figure 4 is the same 1405 video sweep at baseband (video frequency) with zero frequency at center screen and again two traces: 10 dB/div. and 2 dB/div.

It should be noted that the 1480 waveform monitor, when operated in FLAT position, will show an absolutely flat response as compared with the 465 and 453 over a very wide video range. Assuming performance is expected for the 7L13/7613, 465, and 453, this particular test modulator is essentially flat to beyond 6 MHz on the lower sideband and to beyond 12 MHz on the upper sideband. This gives a total range of 18 MHz over which it is not easy to discern variance from perfect response. One exception should be noted: a spur occurs at 2050 kHz above visual carrier. This creates a maximum rise of 0.8 dB at that point for measurements involving the spectrum analyzer. The USB response, however, is perfect at 1.9 and 2.2 MHz, so that for our purposes no significant testing error will result.

You may wonder why a special signal was needed for these tests (see Figures 5 and 6) rather than the standard multiburst, as specified in FCC Rules and Regulations, paragraphs 73.676(f) (1) (i) and 73.699, figure 13. Although at times multiburst can be of interest, its use as a quantitative probe is to be discouraged since the industry seeks better metrology. As an example of its shortcomings, note that the bursts are not all the same width, making direct comparisons in modern spectrum analyzers impractical. At 3.58 MHz there is roughly 5 dB difference between VIRS and burst, simply due to pulse width and shape differences, when a 300 kHz analyzer bandwidth is employed. Differences in analyzer multiburst levels will be somewhat less than 5 dB, but still highly significant.

The problem of meaningful comparison between short-duration phenomena at high frequencies with some low-frequency reference can now be solved as long as certain precautions are observed. It must be realized that the FCC test signals are all keyed or chopped at various repetition rates. Figures 7, 8, 9, and 10 illustrate the broad video spectrum analyzer display for a particular multiburst test generator. Spectrum displays for the other test signals are shown in Figures 11, 12, 13, and 14. This

## SWITCHERS DON'T MAKE MISTAKES...PEOPLE DO

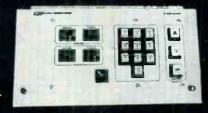

That's why we've designed a whole new series of human-engineered control panels that are setting new standards for goof-proof switching.

Once you've designed audio and video routing switcher matrices as transparent and reliable as ours, there's not much room for further improvement at that end. However, there has been a need for improvement in the control end--particularly where operators must make accurate, quick-decision source selections. The panels described below are designed to eliminate the confusion too often associated with routing switcher control, while providing the control flexibility so important to present-day signal routing requirements.

For installation simplicity, each of these new panels connects directly to the system party line via loop-through coax connections. They provide continuous status readout and can be encoded to permit each input (or output) to be addressed by its name (VTR-2, CAM-4, etc.) rather than by an arbitrary matrix number.

We are also prepared to supply custom variations of these panels to suit your exact requirements.

### **CSP-200**

Permits audio and/or video selection--including simultaneous A/V switching from different sources--on a single output bus. Available in recessed mount, one unit per rack panel and two units per rack panel versions

### **CSP-300/R**

Full Matrix Control Panel. Permits audio and/or video switching on any selected bus. Encoded version can be restricted to switch only on specific pre-assigned busses. Rackmount or recessed.

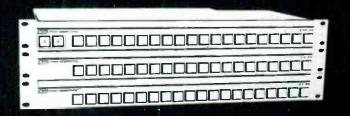

### CSP-10

Controls and statuses ten busses (20 with Program Select switch installed). Provides separate audio and video switching and statusing.

### CSP-20/CX-20

Permits button-per-source input selection on assigned bus. Basic panel accommodates 20 inputs. Expansion in 20-button increments is provided by adding CX-20 slave panels. Permits fast single-stroke selection of any input. Button lamps provide both audio and video status from refresh memory while *Only* buttons permit selective audio or video switching.

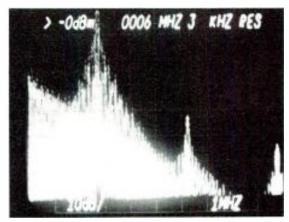

Figure 14. Color bars test signal baseband spectrum around color sc

Figure 15. RF envelope of lines 18 & 19 as transmitted on channel 12. Modified Tektronix 7603

Author's note: Since submission of the original manuscript, a new test generator (Tektronix TSG-6) has been obtained that simplifies procedures with the special test signal described in this article. The new generator also provides an amplitude and phase-modulated multiburst which reduces somewhat the indicated bandwidth of that test signal. When using generators of this kind for demodulator calibration, it is still appropriate to employ the full line special test signal instead of multiburst.

modulation leads to receiver response that may indicate sideband energy extending far from each of the fundamental frequencies involved. This is a spectrum-broadening over and above that due to spectrum impurities (harmonics and spurious), which will be present to a greater or lesser degree in the various models of test generators. The way in which the bursts are keyed on and off will also determine to some extent how the recovered baseband will appear on the waveform monitor and on the spectrum analyzer. It is desirable to minimize spectrum broadening as much as possible. Particularly at the higher burst fre-

quencies, 3.6 and 4.2 MHz, even a properly calibrated

demodulator will give an erroneous impression of system response if it is not in its broadband mode. Accordingly, measurements should be made with the sound trap switched OUT and only the visual transmitter feeding the dummy load.

Alternatively, if the demodulator sound trap or lowpass filter is left IN to eliminate aural interference, the demodulator will act as an upper vestigial sideband detector with results partially dependent upon the shape of the roll-off skirt as well as upon variations in test generator characteristics.

At first we thought the demodulator was somewhat

### Proof-Of-Performance

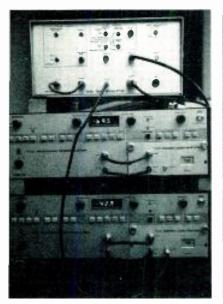

Figure 16.
Double-sideband test
modulator with Tektronix
1450 demodulators

Figure 17. Spectrum analyzer with video sweep generator

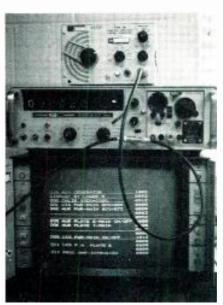

Figure 18. Video test generator (Tektronix 191) with frequency counter

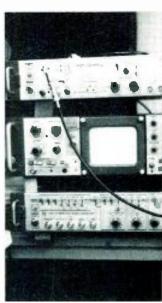

Figure 19. Test signal generators with Tektronix 1480 waveform monitor

rolled-off at 4.0 MHz (vis-a-vis the spectrum display). The error was improper interpretation of the recovered multiburst display. We have subsequently proved the 1450 narrow filter does not start down at least until after 3.95 MHz. Of course, a flat display with sound trap IN generally means the total system is peaked up on the high end. Exactly how much multiburst should appear to roll-off under these conditions must be determined experimentally in each TV plant.

From these considerations, the engineer can see some of the shortcomings of multiburst as a test signal. We need to be very careful in conclusions drawn from imperfect data.

The test modulator output cable is 50-ohm with N fittings. The receiving end of this cable has been loaded with a Narda 757C 6 dB 50-ohm attenuator for the purpose of swamping possible slight reflections in the line. However, results were the same with or without the attenuator, so in this case the added precaution proved to be unnecessary.

### Depth of modulation

A modern version of the old DuMont 5034 waveform monitor has recently been developed at the KVOS-TV transmitter plant. The 5034 was a very simple device: modulated RF was brought directly to the vertical plates of a CRT through a balun. We have often thought there could not be much argument about results from this direct method of modulation measurement. The new version makes use of the excellent horizontal system in the Tektronix 7603 oscilloscope so that any individual line can be examined for modulation depth. Both 1450 demodulators show the identical modulation percentage, and both are

confirmed exactly by the direct method utilizing the modified 7603. A beautiful RF envelope display of linearity, sin<sup>2</sup>, white flag, horizontal sync and blanking, and VIR signals as shown is Figure 15.

### Conclusion

Satisfactory proof-of-performance has been made for a new TV demodulator. Two of the performance tests — for frequency response and depth of modulation — have been described in this article. Although other details of demodulator operation have been investigated, these two are perhaps the most difficult to prove.

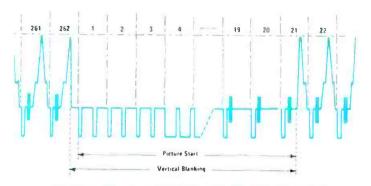

In those cases where the demodulator recovers audio in two ways — intercarrier and split carrier — a good audio system with sufficient gain and limiting can give much information about visual transmitter phase stability throughout the modulation range. Similar information can be gained from a demodulator that recovers video in two ways — envelope and synchronous detection.

The new demodulators may also be capable of providing the stability in recovered video baseband necessary to consider very accurate measurements of envelope delay. The requirement has been implied for years in FCC Rules and Regulations, Paragraph 73.687(a) (5), but accurate measurement of envelope delay from 50 kHz to 4.2 MHz generally has required a compromise split-frequency (20 kHz) swept across baseband by fairly expensive test sets. The 12½T pulse gives a delay comparison between two important bands of frequencies, but cannot suffice for the system proof-of-performance. We look forward to the possibility of software application to this problem using modern demodulators and electronic data processing.

# MARCONI has the proven answer to 'H' & 'V' Blanking Measurements

### Marconi Television Interval Timer Model 2920 measures the following parameters

### **VERTICAL BLANKING MEASUREMENTS**

Total Vertical Blanking Interval Picture Start Equalizing Pulse Width Serration Width

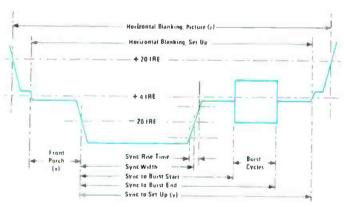

## See How Easily Timing Measurements Can Now Be Made

- Fast accurate measurements at the touch of a button
- Results from samples taken throughout active field
- Blanking at set-up (+4 IRE) and picture (+20 IRE) measured independently to 10 nsec. resolution
- Vertical Blanking resolved to 1/10 line
- Printout from BCD output on command
- All functions may be remotely controlled for simple system integration
- Manufactured in U.S.A., domestic price \$4950

# How can we convince is really a total

Perhaps we should begin by telling you that the Arvin-Echo Slo/Mo-1 is one of the best investments you can make.

It's a great investment because it will allow your staff to offer production techniques that add up to increased business. And increased business means Slo/Mo-1 will pay for itself in a short period of time!

Regardless of your activities— Sports, News, or Commercials—Slo/ Mo-1 can make a big difference.

A difference like Animation! Imagine being able to incorporate Animation from any source into your productions!

If that's not enough, let's add the fact that Slo/Mo-1 uses our unique Discassette\* rather than a hard disc or 1" tape. Because it is a disc, it operates equally well in either

forward or reverse. And that means even the most difficult editing job can be greatly simplified!

So add complete editing to Slo/Mo and Animation!

We don't call Slo/Mo-1 a production tool without good reason!

We set out to design the best Slo/Mo possible. And we built in the features that will make your productions stand out from the competition!

Features like Field/Frame Select, Time Lapse Recording, Digital Comb Filter, High Band Color. And configured to be so small, rugged, and portable that two men can easily transport it to almost any location. Plus Slo/Mo-1

Don't get wrapped up with 1".

# you that our Slo/Mo-1<sup>m</sup> production tool?

is expandable to meet your system requirements!

### So how can we convince you?

In addition to owning one of the best Slo/Mo's on the market, you'll be able to provide services, either in your studio or on location, that will make you Number One with viewers and customers.

Yet, now that we think about it, there's really only one way to convince you.

Give us a call today for a complete, no obligation demonstration and quotation on a lease or buy program!

## **MICROTIME** For Video Processing

Microtime offers an entire range of video products for advanced Time Base Correction, Image Processing, Remote or Local Synchronizing, and Automated Programming for the Best pictures possible.

### 2525 Video Signal Synchronizer

Synchronizes any video source, 3/4" heterodyne, 2" quad, satellite feeds, to station sync. Provides field 1, field 2 or frame freeze for digital video effects. Auto freeze on last field of active video. Infinite H phase resolution and RS-170A Sync Generator for interfacing with any switcher.

### 2100 Video Image Processor

Provides 6dB video noise reduction in luminance and chrominance. horizontal and vertical detail improvement, chroma crispening and chroma hue error reduction. Automatic Chroma/Luminance delay compensation corrects chroma smear inherent in most heterodyne VTRs. Improves the overall picture quality of any video picture.

### 1600 CCD Time Base Corrector

The Standalone TBC uses charge-coupled device technology to provide high performance at low cost. 55 dB Signal-to-Noise Ratio, 4 H line correction range, Auto Trac 2 and automatic sync advance are standard.

### Digitrol 2 Video Source Control System

Highly versatile automated programmer for use in studioapplications, CATV automation, video tape duplication, automatic commercial insertion, editing control, and off-air recording and delay applications.

### 2020 Video Signal Processor

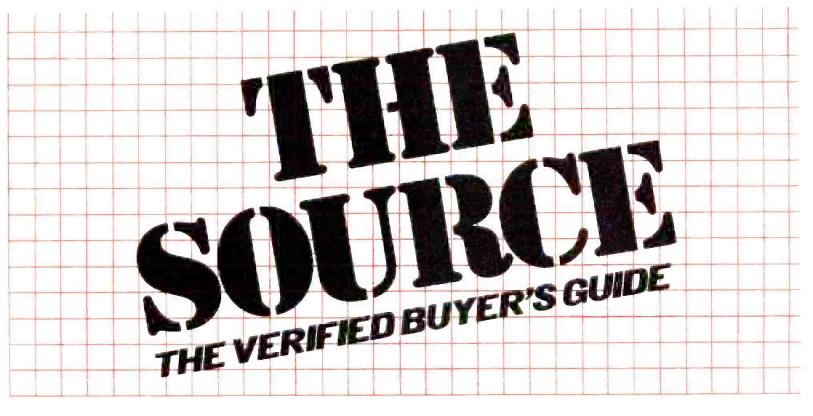

Time base corrects any video source using digital technology. 58 dB Signal-to-Noise Ratio, 4 H line correction range, Auto Trac 2 and automatic sync advance are standard. Line Error Detection, Velocity Correction, 24 H line Wide Window correction range, Dropout Compensation, Image Processing and Noise Reduction Options are available to fit your particular needs.

All Microtime products are available and supported through our worldwide distribution network.

Call today for the name of the distributor nearest you.

WELCOME TO THE SOURCE, 1979. This year's buyer's guide, compiled by BM/E, provides you with the most current list of manufacturers and independent representatives and distributors serving the broadcast industry. The Source is designed to be a useful everyday guide to the most important products and services required by the broadcaster to stay on-the-air.

Everything has been done to assure the reader that the companies listed are reliable sources of products and services. The companies whose listings incorporate a VS symbol are "Verified Sources." The VS designation means that the company has supplied BM/E with information indicating that the products claimed by the company are regularly available to broadcasters. This supporting information is on file with BM/E.

The Source is divided into three sections: the Instant Source Locator, an alphabetical listing of suppliers, and a listing by state of independent reps/distributors. The Instant Source Locator (beginning on page 74) is designed to help you find manufacturers of particular products. Ten major product categories have been noted and indexed. Each of the 10 product categories has been further subdivided into classes of products and then broken out into specific product types. For instance, Category I, Audio Equipment, has as its first subcategory Audio Amplifiers. Audio Amplifers are further divided into eight specific types of amplifiers.

Here's how to use The Source: first, identify the product you seek by its general category (i.e. video or audio). Then after you find its general category look for the specific heading that applies and finally for the specific type of product you need. If, for instance you were looking for a wireless microphone, you would first turn to the Audio section, look for the microphone heading, and then look for the "wireless microphone" listing. You would find that wireless microphones in the microphone section are number 4. Look across to the list of companies and note each company name accompanied by the number 4. This should give you a complete list of companies manufacturing this product. Then turn to the alphabetical listing of Broadcast Equipment Manufacturers (beginning on page 89) and you will find these companies along with their addresses, telephone numbers, descriptions of their entire product line, and possibly references to the rep/dist list. If a reference to the rep/dist list is provided, you may find the nearest source of the product by turning to the listing of Independent Broadcast Reps and Distributors (beginning on page 161) for your state. By scanning this list for a boldfaced cross reference to the manufacturer's name, you should find a local source.

Another useful reference you may find will be the red listings provided to advertisers. Below the advertiser's listing will be a reference to the page on which its ad appears. Consulting the ad will often provide you with details on the product you seek or on the company you wish to contact.

Remember, the VS in the alphabetical listing or the ▼ in the Instant Source Locator is our way of assuring you that we have information indicating that the products you are looking for are normally available from the manufacturers so designated.

## JVC's \$17,000 editing system.

If you think a third audio channel and 10 extra lines of resolution are worth an extra \$6000 in a 3/4" video editing system, read no further.

But if you'd like to save \$6000 compared to the nearest performing competition...yet perform advanced editing functions at tape speeds up to 10 times normal (a JVC exclusive)...and produce broadcast quality tapes even if you're not an expert...then the CR-8500LU system including RM-85U Editing Control Unit is for you. It has many features you won't find elsewhere

except on that higher priced system. Plus some you won't find even there.

### Fast, no-glitch editing

With pushbutton ease, you get distortion-free frame-to-frame editing, thanks to JVC's built-in rotary erase head, blanking switcher and advanced servo mechanism. First, you have a choice of 11 forward and rewind search speeds, from still-frame to an unequaled 10 times normal. After picking edit points, you also have a wide choice of automatic preroll times. (The more expensive

system limits you to 2 or 5 seconds.) Then you can preview your edits and adjust edit points. Preroll again, and edits are made automatically, electronically, at exactly the selected points ±2 frames—an accuracy equal to the higher priced system. There's also a horizontal sync phase compensator to minimize timing error. A patented dubbing switch for maintaining stable color. And much more.

The RM-85U Editing Control Unit has independent LED displays for player and recorder. Each gives elapsed tape time in

## For those who need funds, not frills.

minutes, seconds and frames.
Or. the exact length of one edit
—a JVC exclusive. But wait!
Maybe you don't even need a
full system.

### **Stand-alone versatility**

Let's say you just want to assemble or insert edit live material onto a tape. All you need is one CR-8500LU Recorder/Editor...which still gives you the benefit of automatic preroll. By contrast, the higher priced brand makes you buy a control unit as well.

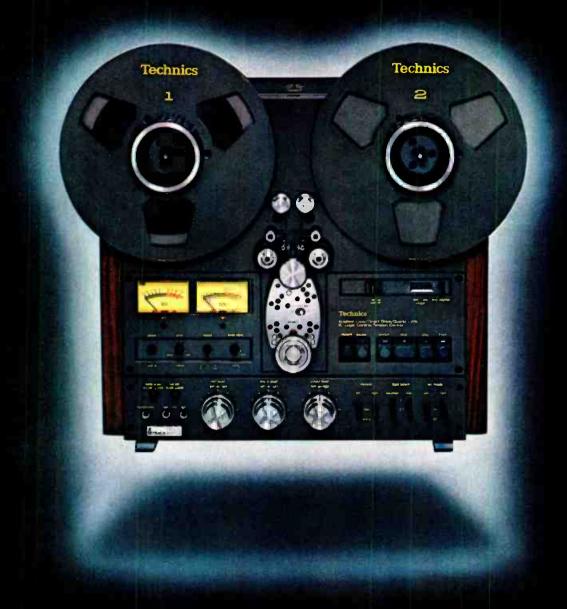

Let a JVC dealer show you how our editing system gives

you much more for your money. For the name of your nearest dealer, call one of these numbers collect: East. 212-476-8300; Midwest. 312-364-9300; South. 713-741-3741; West. 213-537-6020. US JVC Corp., 58-75 Queens Midtown Expressway, Maspeth. NY 11378.

Mail to US JVC Corp 58-75 Queens MIdtown Expressway. Maspeth, NY 11378. I'd like to know more about the CR-8500LU editing system including RM-85U Editing Control Unit.

# The Technics isolated-loop system. It's the one big difference between their decks and ours.

Every one of Technics four open reel decks has one thing in common: The performance of Technics isolated-loop tape transport system. And that means performance that's comparable to professional open reel decks costing thousands of dollars more.

By isolating the tape from external influences, our isolated-loop tape transport system minimizes tape tension to a constant 80 grams. This not only provides extremely stable tape transport and low head wear, it also reduces modulation noise and wow and flutter to the point where they're detectable on only sophisticated testing equipment.

Electronically, our line of isolated-loop tape decks are equally impressive. The reasons are as simple as their IC full-logic transport controls, highly accurate microphone amplifiers, FET mixing amplifiers and separate 3-position bics/EQ selectors.

And you'll get all this technology whether you choose the two-track RS-1500, the extended playing time of the 4-track RS-1506 (shown above), the convenience of the

4-track RS-1700 with auto-reverse or the studio features of the RS-1520.

There's also an optional full-feature infrared wireless remote control (RP-070). With it you can get your hands on all this sophistication from up to 20 feet.

All four decks hit the competition right between the reels. Because all four have: FREQ. RESP.: 30-30,000 Hz,  $\pm$  3 dB (-10 dB rec. level) at 15 ips. WOW & FLUTTER: 0.018% WRMS at 15 ips. S/N RATIO: 57 dB (1506 & 1700) and 60 dB (1500 & 1520) NAB weighted at 15 ips. SEPARATION: Better than 50 dB. START-UP TIME: 0.7 sec. SPEED DEVIATION:  $\pm$  0.1% with 1.0 or 1.5 mil tape at 15 ips. SPEED FLUCTUATION: 0.05% with 1.0 or 1.5 mil tape at 15 ips. PITCH CONTROL:  $\pm$  6%.

Technics open reel decks. A rare combination of audio technology. A rare standard of audio excellence.

### AT THE TOP OF ITS CLASS

The field tests are done...the results are in...and the scores support our highest expectations for TFT's new Series 7700 Studio Transmitter Link. Our goal was to offer a fully secure, low noise link with enough power to economically compete with telephone line systems over the roughest transmission terrain. From Shell Plaza in downtown Houston to Mt. Sutro in San Francisco, we put the 7700 through its paces; comparing noise, security, frequency stability, crosstalk and power against the toughest customer demands and the best that competition had to offer. Individual performance tests were evaluated by chief engineers from several of the top stations in the country. The results — TFT Series 7700 won hands-down in every category considered vital to a studio transmitter link.

QUALITY SOUND: 70 dB S/N ratio and 40 dB stereo separation from 50 Hz to 15 kHz with 50 dB @ 1 kHz crosstalk between main and subchannels.

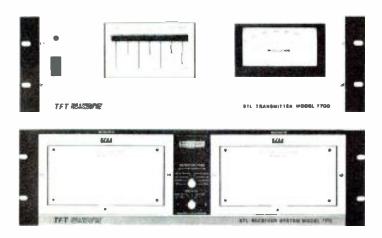

SECURITY: Fully redundant receiver and transmitter, both with automatic transfer and alarm.

FREQUENCY STABILITY: Fully frequency synthesized transmitter.

POWER: Adjustable up to 12-watts to compensate for degradation and handle long and difficult terrain.

ECONOMY: Modular design for easy field servicing. Sealed solid state components.

All sound too good to be true? We'd like to show you our recent field test reports and complete specifications, so you can judge our STL for yourself. Call or write TFT.

"25 people use our six Dynasciences editors daily, including reporters who must edit their own stories. There's no time to teach them complicated editor operation. Not one has had trouble learning to make quick, accurate edits with a Dynasciences editor."

Ardell Hill, Technical Supervisor WALA-TV, Mobile, Alabama.

In today's fast-paced communications world, why do many top notch professionals like Ardell Hill rely on Dynasciences basic, post production and ENG editors? Because when the pressure is on, our editors deliver the most reliable, accurate edits possible in any format.

A full range of professional features substantially re-

duces production and maintenance costs. Standard controls are human engineered for ease of operation. Our patented positive reverse drive system (PRDS) reduces tape tension on reverse modes and minimizes wear. The exclusive Digital Insert Memory assures precise out-cueing of insert edits. And there's much more.

If YOUR EDITORS aren't keeping pace with your needs, it's time you moved up to a DYNASCIENCES EDITING SYSTEM. Call or write us today for more information.

# Super Sleuth

The Lenco 300 System/PCO-317 Automatic Sync Changeover Switch instantly detects the failure of any synchronizing signal and immediately switches to an alternate source. Each input is monitored for the level and timing of the sync, blanking, horizontal drive, vertical drive, burst flag and subcarrier signals. The PCO-317 monitors the outputs of the *generators* and not

the output of the changeover. Therefore, it will either command a switch or prevent one; but it will never attempt to switch to a faulty generator. And you can use it with two of our generators, one of ours and one of yours, or two of yours.

To find out how you can keep a constant check on your sync signals, ask for a Lenco 300 System/PCO-317 demonstration today. You'll see at a glance why the *professional* switch is to Lenco.

### Plant expansion

### New machine control system cuts installation costs now - reduces downtime later.

If you are about to install new tape machines, remodel your plant, or move into a new facility, now is the time to find out how the new TCS-1 Machine Control System can reduce your material and labor expenses during installation—and streamline your operation for years to come.

The TCS-1 is easy to install because it uses dual twisted pair audio-type wiring, rather than the complex multi-conductor cables normally used with remote controls. Through the use of microprocessors, the TCS-1 can use these twisted pair connections to operate up to 100 VTR's and/or film chains.

But aside from easy installation, there are some significant technical advantages to the TCS-1. For example, the system includes provisions for assigning specific machines to specific control panels, eliminating the possibility of conflicting or unauthorized control commands reaching the same machine from different control stations. And, by spreading the ma-

chine control data over as many as eight buses, the TCS-1 is able to send and receive data more quickly than systems in which all data must be funneled through a single bus.

System redundancy is another advantage of the TCS-1. If one of the control buses should fail, there are still seven others. And, since identical microprocessors are used throughout the system, any one of them can be replaced with any of the others—just change out the board, plug in a spare memory chip, and you're back on line.

For system control, the TCS-1 uses a modular, buildingblock approach which allows you to determine the size, shape, color, and function of your control panels. Just tell us what you need and we'll build it!

For more information about the new software-based TCS-1 Machine Control System, write or call TeleMation Division, P.O. Box 15068, Salt Lake City, Utah 84115,(801) 972-8000.

### fact: the SC 39 Series meets all the unique demands of professional cartridge users

- Broadcasting
- Recording
- Disco
- Transcription and other professional uses

The Professional Challenge: Undistorted playback. even of the toughest-to-track. "hottest" recordings.

The SC39 Solution: The Shure-designed shank structure and bearing assembly gives trackability up to and beyond the theoretical cutting velocities of today's recordings. Frequency response is essentially flat acres the audio spectrum. Optimized for professional applications.

The Professional Challenge: Day-in. day-out rigors of slip-cuing, backcuing, and the inevitable stylus abuse that comes with the job.

The SC39 Solution: The internal support wire and special elastomer bearing insure stable and accurate backcuing without groove jumping. This, plus the following exclusive features, protect the SC39 from accidental stylus damage:

### SIDE-GUARD Stylus Deflector

A unique lateral deflection assembly prevents the most common stylus damage by withdrawing the entire stylus shank and tip safely into the stylus housing before it can be bent

### FLIP-DOWN Locking Stylus Guard

The exclusive lever-operated, locking stylus guard gives the stylus tip positive protection when not in use. With the flip of a lever, it snaps out of the way, and positions a highly visible cuing aid.

The Professional Challenge: Prolonged record (and lacquer master) playability without objectionable noise buildup.

The SC39 Solution: A unique Shure MĀSAR™ stylus tip is designed to minimize noise and cue-burn on records Tests on lacquei masters show that the noise level on a record played repeatedly with an unworn Shure MĀSAR tip is significantly below that of a similar disc played with an unworn conventional stylus. The SC39 also reduces noise buildup on 45 rpm records made from reprocessed or substandard vinyl

The Professional Challenge: A multiplicity of different applications, which no one cartridge can satisfy

The SC39 Solution: The SC39 Series consists of the following three cartridges, for every professional and high fidelity application:

Cartridge	Stylus tip	Tracking force	Applications	
SC39ED	Biradial (Elliptical)	3/4—1-1/2 grams	1 1 3 11 11 11 11	
SC39EJ	Biradial (Elliptical)	1-1/2—3 grams	Applications where heavier tracking	
SC39B	Spherical		forces are required. AM broadcast disco.

# **SAVE 30% TODAY...**

### Save 30% on NEC's FS-15 Frame Synchronizer

This is not a "limited time only" come-on. Our new regular price is 30% lower than ever before.

Thanks to market popularity, we can now mass-produce the FS-15, using advanced assembly line techniques. Efficiency is up. Costs are down. Especially on the heart of the FS-15, the NEC 16K RAM Memory.

And at NEC, our long-standing policy is to pass cost savings on to our customers.

This new lower price applies to the frame synchronizer family that won the 1975 Emmy Award for outstanding engineering excellence...a compact, energy-efficient package designed to provide full-frame storage for instantaneous synchronization of remote to local signals.

### Features:

The FS-15 is the first frame synchronizer to use 16K RAM Memory Chips—the ultimate system for operational stability. Unique data rotation control allows the user to continue on air while covering a memory failure within a few seconds. The FS-15 built-in memory analyzer pinpoints the defective component in less than a minute. Additional service is assured by internal provision for direct connection of the A to D converter to the D to A convertor.

Also built-in: a sync generator providing H, V, Flag, Subcarrier and Sync Blanking pulses...bypass capability...RG-59 cable equalizer (up to 800 ft.)... plus a special differential input circuit that eliminates common mode hum from remote lines

And except for the input and output video amplifiers, everything is digitized: all sync signals, including blanking and burst, and all options, including TBC, Freeze Frame/Field and Velcomp. You get a stability that's just plain impossible with analog units.

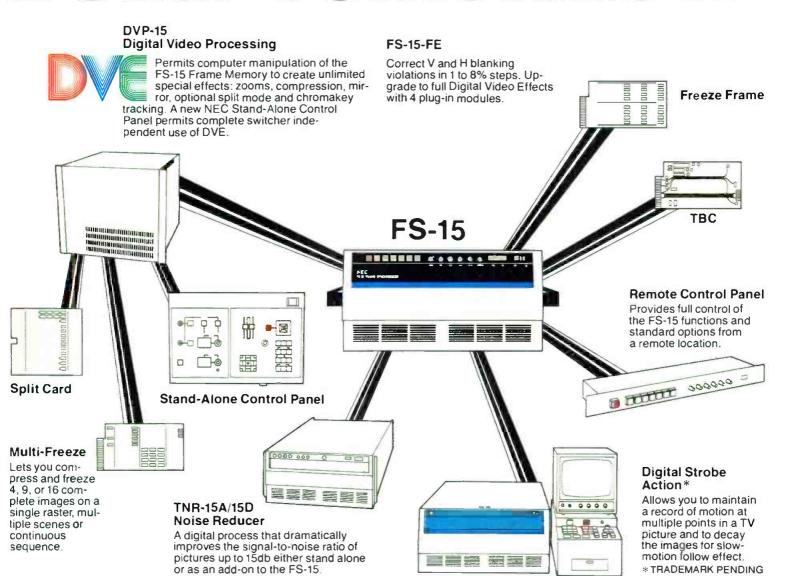

The FS-15 is a lot of synchronizer for the money. But price isn't the only economy. NEC's FS-15 family "building block" design lets you buy only as much capability as you now need. Later, to expand your system, add any of the modular options shown on the next page. They'll let you create just about any production effect you can think of.

# EQUIPMENT MANUFACTURERS

Listed below, in alphabetical order, are hundreds of manufacturers of products for the broadcast industry, and companies supplying services such as studio and mobile facility construction, lens repairing, consulting, etc. The information is based on the manufacturers' responses to an extensive questionnaire. In addition, those manufacturers who supplied product literature with the responses have been verified as regular suppliers of the products and services listed; a "VS" symbol (Verified Source) appears after the listing. Also included for some companies is a list of field office addresses and telephone numbers directly following the main product listing. New this year, as an extra service to readers seeking more information, is the appearance of advertisers' names in red, cross-referenced to the page on which their ad appears and to our list of independent broadcast reps and distributors when applicable. Also included in this section are some exclusive nationwide distributors of certain brands (which appear in parentheses after the product description).

You don't need a "gorilla" to carry the portable HBU-4400. It weighs only 22 lbs. without the battery and provides 10 full minutes of recording time per cassette. Cassettes are preferred for portable applications because you don't have to monkey around with reel-to-reel tape. High band "quad"

quality is achieved by tripling the head-to-tape speed of the U-format recorder and adding Recortec electronics to a transport with proven interchangeability. For reliability reasons the capstan and scanner speed increase is achieved without any change in motor rpm and, of course, all bearings are still well within their design limits.

And when you need a studio machine for playback and editing there is the HBU-2860 that will faithfully reproduce your high quality HBU tapes. We kept the 2860 remote control interface unchanged so it can work

HBU-2860

with your computerized editing system.

The HBU format is economical to own and economical to use. The HBU costs less than a third of machines of other formats with the same video quality. Tape costs are lower too. CONCLUSION: Buy the HBU and donate your "gorilla" to the zoo.

Other products from Recortec are: Video Tape Conditioners and Video Tape Evaluators for all tape widths, Video Cassette Evaluators, Video Tape Timers and Reel Servo Modifications (R-MODs) for quad recorders and Video Tape Addressors which record time code on two-inch tape at high speed.

Broadcast media teams must be ready at a moment's notice. With Christie's integrated system; the REFLEX\* 20 Charger and sempiternal ni-cad battery packs, there is virtually no wait. Recharge? The fastest in the industry. 12 to 20 minutes and you're completely charged.

Because of the revolutionary "burping" system the batteries remain cool, their cycle life is extended up to 10 times that of conventional ni-cads and 50 times that of other rechargeable batteries.

The Christie System . . . reliable, effective and 90-97% efficient.

# 50 years experience plus REFLEX®20 makes you: CHRISTIE-READY.

## Marconi

From the earliest days of broadcasting, MARCONI has been a world leader in the design and production of high performance systems. MARCONI pioneered the automatic camera and only MARCONI offers you second generation automatic cameras ... with a unique design based on the benefits of field experience. There are over 100 MARCONI remote vehicles in service so you can have total confidence in our equipment design and guidance in solving your specific problems.

Whether your interest is in 1 inch VTR's, cameras, transmitters, digital standard converters or complete systems, call MARCONI - our experience, in more than 120 countries, is available to you.

# OPTIMOD CLEANER, BRIGHTER, LOUDER.

OPTIMOD-FM combines compressor, limiter, and stereo generator into an integrated system that's become the #1 audio processor for North American FM's. Users report improved quality, coverage, and loudness—and love the easy installation.

And the new OPTIMOD-AM permits progressive-minded AM broadcasters with quality plants to broadcast a standout signal that's perceived as "almost high fidelity" on common car, table, and portable radios—without loudness loss or objectionable distortion. Hundreds are already in use.

AM or FM—OPTIMOD creates sound that dominates the dial. To find out more, call us toll-free (800) 227-4498. In California or outside the U.S. (415) 957-1067.

# BETTER we do it all...in Routing Switchers & Switchers

D-4300 Series Video & Audio Switchers

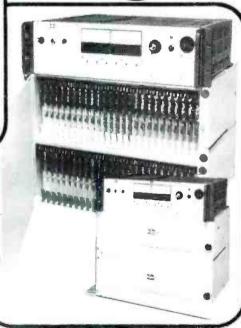

Available as 6x1 video, 6x1 audio, 16x1 audio-video, 20x1 video and 20x1 audio-Video only, audio only, or video-audio. May be stacked for multiple output bus applications. Uses digital control system with coax remote control cable. Each output bus has an independent control system.

D-400 Series Video & Audio Switchers

Available in 20x10, 20x15, 20x20, 30x10 and 30x15 video and audio basic matrix sizes which may be used as building blocks for larger systems for up to 100 inputs. Control system is BCD. Each output bus has an independent control system.

D-2000 Series Video & Audio Switchers

Available in 25x20, 25x25 and 50x25 video and audio basic matrix sizes. Digital control system is designed for 250 inputs and coax is used for remote control cable. Each output bus has an independent control system.

### ADDA-THE LEADER IN DIGITAL STILL STORAGE CARRIES THE COUNTRY.

The still store picture from the East Coast to Hawaii is clear. Unequaled insight into broadcasting's digital storage requirements has made ADDA ESP-Systems by far the industry's largest seller.

### MILWAUKEE MIAM

WTMJ-TV Milwaukee's NBC affiliate WTMJ-TV employs the ADDA ESP-200 for its news programming. The ESP-200, like all ADDA ESP-Systems, is a highly cost-effective replacement for slide chains. ESP-Systems cost less than slide chain equipment and occupy less floor space (only six square feet). Labor and handling costs are substantially reduced and film processing costs as well as time delays are eliminated. ADDA's ESP-Systems provide considerably greater slide capacities. On-line editing allows sequences to be programmed in advance and then reprogrammed while on the air.

WCKT In Miami, NBC affiliate WCKT utilizes the ADDA ESP-750 to create, store, and retrieve stills instantly for its news programming. The ESP-750 features an on-line storage capacity of 1500 frames with up to 100 programmable sequences and 800 programmable frames. Last minute news coverage material can be inserted up to three minutes prior to air time. Only ADDA's ESP digital still store systems conform to new SMPTE digital recording standards at four times the color subcarrier. ESP-Systems are also great for recallingstored character fonts.

### HONOLULU

KGMB-TV The commercial production department at CBS affiliate KGMB capitalizes on the creative versatility of the ADDA ESP-200. All of ADDA's ESP-Systems enable you to simulate zoom or animation, spin stills, fade, dissolve, wipe, and super through the program switcher. High resolution stills can be created from live camera, VTR, 16mm film, and network or satellite feeds.

See what ESP-System best suits your needs. Call, write, or check our reader service number for more information and a demonstration. 1671 Dell Avenue, Campbell, CA 95008 (408) 379-1500

No matter how many times we've heard this from customers, we'd love to hear it this time from you!

When you choose Stainless to fill your tower needs you get quick access to a wealth of experience. We don't just sell towers, we give you performance-proven advice on all aspects of the job, even ones you may have overlooked in your specs.

We'll show you how we cut costs with no sacrifice of quality, using automated processes for faster, cheaper and better results.

Stainless will build to your specs on your site or, we'll pick the best site, run soil analyses, then design, build and erect the optimum performance tower you need. We've been satisfying government, military and industrial customers, worldwide, for over 30 years. Every Stainless Tower, whether 200' or 2000', has priceless experience and reliability built in — to last!

Call Stainless, "the Tower People" and make a good investment for the future.

### YAMAHA'S NEWEST TOURING PROFESSIONAL.

Yamaha's new PM-2000 Mixer. Ideal for professional sound reinforcement, it's the kind of full production console pros have always had in mind, but never in hand.

The PM-2000. The touch is solid. smooth, consistent. It feels like the professional console that it is.

The knob, switch and slider placement anticipate where your hands will naturally fall.

With 5-position, 4-band equalization and six independent sends on all 32 inputs, plus a full function, 14x8 matrix, the

PM-2000 has everything you would expect from the consummate professional console.

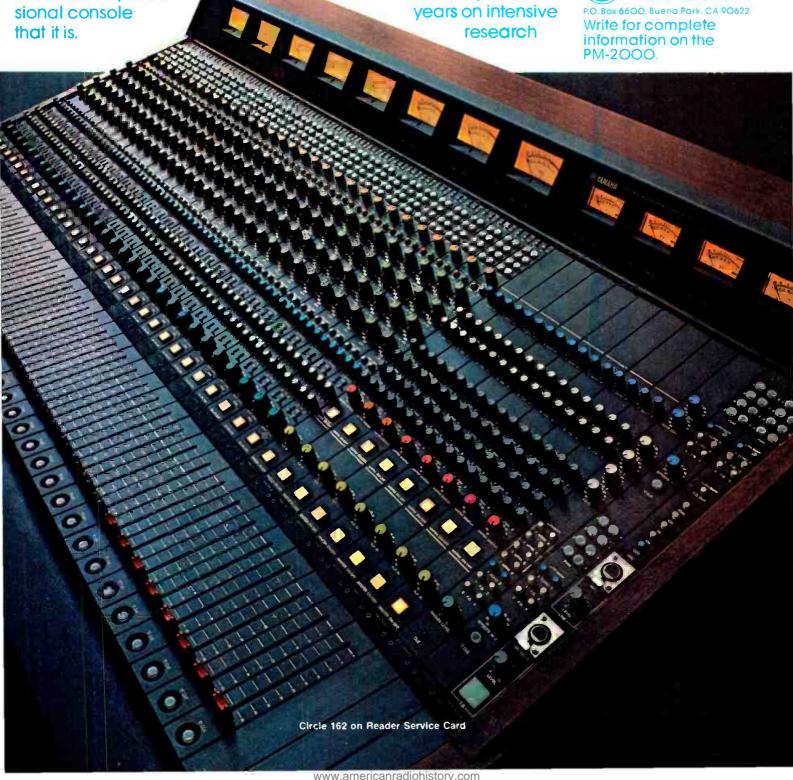

And if the PM-2000 looks and feels like a custom console, and seems to have read your mind, it is no accident. Because Yamaha spent two years on intensive research

and prototypes based on input from professionals. One touch and you'll realize: the PM-2000 feels how you think.

Available early 1979, on a limited basis, through select Yamaha dealerships.

Write for complete information on the PM-2000

# The Senator just announced he's running again. Too bad your camera isn't.

If you've lost a story because of weak, unreliable batteries, take a look at Alexander Ni-Cad replacement batteries. Alexander was a pioneer in the development of nickel-cadmium batteries for ENG and EFP. And we're working closely with station engineers and videographers to develop new power products for even greater reliability.

Alexander. Batteries are our only business.

Circle 163 on Reader Service Card

# America's Largest Manufacturer of Broadcast Cameras. West of the Delaware River.

### A JILLION CAMERAS

since 1968. We've been at it longer and better than most. Consequently, we know TV cameras. In 1977 we committed CEI to a new direction in broadcast color television cameras. At last components were small. Needs were different. Flexibility was key. And portability was a must. So, we developed the 310 system and not just one more bulky contraption with unnecessary flaps, doors, handles, corners, louvers, wires, cables ... and weight.

### TOTE IT. MOUNT IT. POINT

IT. USE IT. The CEI 310 is a camera designed to be used. It is a true two-in-one camera which performs beautifully in either studio or field applications. When you want to change from one to the other, you can do so simply in a matter of minutes. Plus CEI cables hook together without specialordered adaptors — for a range of up to 2400 feet. The CEI 310 is built for real live people. When field equipped, it's naturally suited for the shoulder. The eight pound head rests easily for hours at a time. The cord's exit path follows a normal line down the back of the cameraman.

### A SIMPLE LITTLE THING.

OUR EU. A six-sided box. blank on four sides: The front panel has all the controls. The rear has all the connections. That's it. Simplicity itself. Inside, the first five of our printed circuit boards handle the normal functions you'd expect. But what we call "board 6" is for today's engineer. Because it's for tomorrow. And it's empty. That's where we put such things as automatic pedestal, iris window shade and a SMPTE time code generator. That's today. For tomorrow there'll be more. The point is, once you've got our basic unit we can offer you bells and whistles for years to come. They'll always fit your

### RUGGED RELIABILITY. Kick

it around. Alot. The 310 has been places you've never seen: Coal mines, helicopters, surgery, sports fields, studios, wheel wells, fishing piers and cable cars. CEI stands behind our quarantee of service and parts in less than 48 hours. But you don't have a broken 310? We're not surprised. Few people do. That's why we offer you an unedited list of uncoached users. We're betting you'll find a preponderance of good comments about CEI and its cameras.

Circle 209 on Reader Service Card

### WE SHOW UP AT THE

shoot-outs. Everybody claims to meet their specifications. And finely-tuned, in a clean room, some do. Ours goes the next step better, in actual use, every day: The 310 actually beats our published specs. We would be happy to lend you a camera for an evaluation in your facility. Our Chief Engineer speaks your language and he is here every day to answer your technical questions. Give us a call.

Two for one price.

The UREI model 535 Dual Graphic Equalizer is two independent graphic equalizers with one common power supply. As a successor to the popular model 530, it offers an additional filter section per channel plus greater control range and more output capability. The 535 provides 12dB of boost or cut at each of its 10 frequencies centered at preferred ISO one-octave increments from 31.5 Hz to 16 kHz. Filters have excellent combining action with minimum phase shift. Input capability of +20 dBm and output of +24 dBm, combined with excellent S/N provides exceptional dynamic range. S/N is better than 110 dB at maximum output. Front panel controls adjust gain from -10 dB to +20 dB. Get two equalizers in one package. Save rack space and save money too. See the 535 at your UREI dealer today!

# **Four Solid Reasons** Why Toshiba's PK-39 Stands Head And **Shoulders Above Them All**

e brought together three of North Amera's leading broadcast equipment distribors and asked them to provide us with

me candid observaons about our PK-39 rtable Broadcast amera... to make

e want you to know at our growing family Video Systems Network distributors is ady to tell you that ∍ PK-39 does a lot of

portant things that set it apart m other cameras.

e PK-39 is a light, 14-pound camera stem for both remote and studio plications. It is perhaps most versatile, flexible IG/EFP broadcast camera ever signed. Self-contained or two ece, it offers auto beam control. to white balance, and auto iris. will accept either Plumbicon\* Saticon\*\* tubes. It also has an tional 5-inch studio viewfinder. think these three distributors. is the others you'll soon be hearfrom, are solid reasons you

ould consider the PK-39. We are

"The PK-39 is the 'available light' camera. The dynamic range and contrast ratio are superb.

Los Angeles

has built a lot of unique features into the PK-39. such as a vertical interval test signal that simplifies VTR color phase playback. We saw it. We liked it.

We recommend it." Al Cervenka Video Equipment Corporation of America San Diego

selectively building a strong regional distributor system that will offer you better products, service

> "If an ENG newsman, field production specialist and chief engineer each gave us their specifications and ideas. we would give them the PK-39. It's been designed with each in mind."

> > Bill Dwyer Lake Systems Newton, Mass

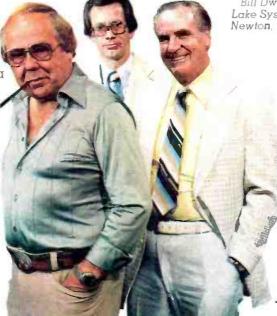

and support than you may be getting now.

The fourth reason is Toshiba's own factory engineering, service and support organization -located in Sunnyvale, California, and Atlanta, Georgia. We'll bet it, too, is better than what you're used to. And our distributors know it's just the

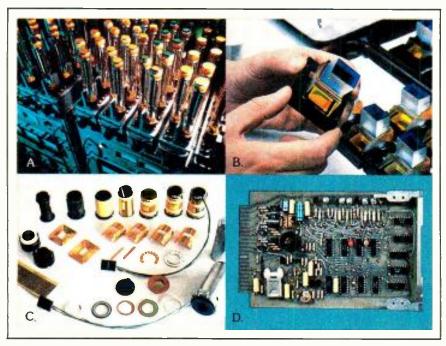

beginning. There's lots more to come from Toshiba. Discover for yourself by learning more about our complete camera line. See your distributor. Or call Toshiba's Broadcast Electronic Systems Division, collect. (408) 734-9172. 292 Gibraltar Drive, Sunnyvale, California. 94806. In Atlanta it's 2971 Flowers Rd. So. Phone (404) 458-9562.

# Family Technology

- A. Plumbicon<sup>TM</sup> Tube Technology C. Yoke Technology
- B. Prism Technology
  D. Electronic Circuitry Technology

Philips called it, "Focus on Technology" at NAB '79 in Dallas. Simply put, it was a demonstration of the single, most important reason for the basic superior technology and design advantages that make Philips the acknowledged leader in color television:

"Philips is the *only* camera manufacturer who designs, develops and produces *all* four, critical, picture-determining components—Pick-up Tubes, Prisms, Deflection Yokes, and Electronic Circuitry—each designed for optimum, total camera system performance."

This basic technological advantage enables Philips to continue offering the world's finest line of broadcast cameras. The most diversified camera family in both price and application. *The Technology Family*.

# Technology Family

%-inch ENG/EFP/Studio broadcast camera with picture quality and features of Philips larger studio cameras. Lightweight, rugged, one piece with the look and feel of a film camera. Low power consumption; high sensitivity; dynamic beam control (DBC); fully automatic operation including auto-centering, and switchable black stretch. Available with simplified remote control or full facility control unit with full bandwidth chroma key.

ily with ACT or new 1-inch 73XQ Diode-Gun Plumbicons and camera circuitry for higher resolution and lower lag than 30mm cameras. With better than 65% depth of modulation at 400 lines! Makes the finest, state-of-the-art multicore studio and field camera ever produced better than ever. And Philips exclusive rearloading design delivers the maximum out of this new Diode-Gun technology.

Rounding out the LDK-25 family are: the LDK-5, a digitally controlled triax version for remotes and modernized studio operation; and the LDK-15L, an LDK-5 in a self-contained mode or can be used with the LDK-5 or 25 CCU in system configurations.

VIDEO 80...innovative convertible camera system for multi-use applications. Unique, three 3/3-inch Plumbicon camera head converts in seconds from studio mode (available with optional, multiposition, tiltable viewfinder) to new, lightweight EFP field production mode with  $1\frac{1}{2}$  viewfinder to totally self-contained ENG portable. Even to special application modes for telecine, microscopy, endoscopy, etc. Easy set up and operation by non-technical personnel and automatic features for total mobility. VIDEO 80 also offers a complete expandable production system for start up or expansion of existing systems.

I.F. Transmitters...Philips is also the recognized world leader in transmitter technology, now with the fastest growing UHF/VHF transmitter line in North America. Output ranges up to 110kW. Equally suited for single or parallel operation with

automatic or remote control for unattended operation.

Features include I.F. modulation, solid state design except for power stages, high stability and ease of installation and maintenance. SAW filter, reducing number of controls to achieve proper group-delay. Small size and minimum floor space made possible by the advanced design and a unique common exciter that can be retrofitted into earlier competitive systems.

Also included in Philips "Focus on Technology" and part of our growing family of system products:

- One-inch **Video Recorders** to meet your specific requirements.
- New digital Video Noise Reducer
   —Fully automatic.
- A state-of-the-art Tape Synchronizer for totally integrated systems operation.

It all adds up to the widest range of cameras and television equipment in the industry. More information is yours simply by writing today on your company letterhead (indicating product interest) to: Philips Broadcast Equipment Corp., 91 McKee Drive, Mahwah, N.J. 07430 (201) 529-3800. (Canada: Philips Broadcast Equipment, 601 Milner Ave., Scarborough, Ontario M1B 1M8).

# Innovative Leader in World Television **PHILIPS**

It's the RCA tradition of growth and innovation; a tradition of being an engineer's company dedicated to pioneering new technologies. We brought Nipper™ back to emphasize the fact that although we are one of the nation's largest industrial firms, we are still an imaginative, pioneering bunch of innovators not unlike the group who started it all. If you have some ideas you'd like to get on the move, talk with us. We have openings at all experience levels for BS/MSEE's with backgrounds in RF systems and antenna design, closed loop servo systems, high speed digital signal processing, VTR's, and related areas of

electromagnetic imaging, recording, and transmission. For further career information with RCA in the above areas, send your resume and background information to John Hendrickson, RCA Broadcast Systems, Bldg. 3-2, Camden, NJ 08102. We'll return a full-color print of our familiar trademark Nipper, to you, suitable for framing, at no obligation.

We are an equal opportunity employer Male/Female.

A Tradition On The Move!

# CREATIVE FREEDOM

# Who more than you, deserves all this?

The Z6/B has all of the outstanding features of its predecessor, the Z6/A plus . . .

- Auto Edit any or all 99 events can be performed at the push of a single button.
- Sync a Z6 exclusive, keeps both tapes synchronous with respect to each other. Move either tape in either direction and the other transport will move the exact number of frames.
- ADR Automatic Data Replacement, when activated, sends the editor in a "looping" condition. The operator can replace data numerous times until it is a "take."
- Auto Cal automatically assigns the proper number to the proper frame of video on any new tape. No longer do known locations or SMPTE addresses need to be referenced.

The Z6 data display is a continuous readout of all edit parameters, including operator prompting messages.

### Z6/B standard features include . . .

- Bi directional joystick shuttle
- Auto search
- 99 event memory
- Full status display
- Cruise control
- Rehearse, perform, review edit
- Error and prompting message
- Programmable Pre and Post rolls
- Single glide ballistics
- NO mechanical mods to VTR's
- SMPTE or Micro-code display
- Return to "in" or "out" points
- Micro-loc frame accuracy
- Consecutive non stop mode change
- Full VTR remote control
- A/B monitor select
- Tag functions

### Z6/B options include . . .

- Drop frame/Non drop frame readout
- Dump an exclusive Z6 feature which records all memory on the video tape itself
- Line Printer allows a hard copy readout of all edit decisions and parameters

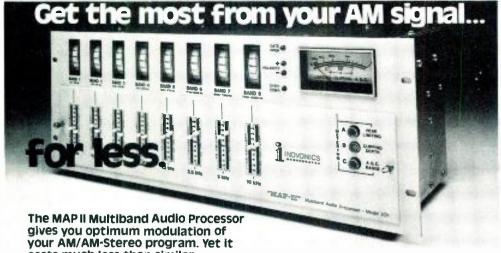

Z6 is truly the most powerful video tape editing system available. Call Videomedia or your local dealer for more information.

Circle 267 on Reader Service Card

costs much less than similar systems.

**Discriminate Compression** Only MAP II offers you independent compression and equalization for each of eight bands. Input level is held constant by a slow, gainriding A.G.C.

**Inaudible Phase Optimization** Program phase is silently "rotated" for maximum positive modulation.

**Absolute Peak Control** 

A unique integrated peak controller combines a hard clipper with a lowdistortion peak limiter.

**Convenient Operation** 

Features include selectable lowand high-pass filters, "proof" mode, and built-in pink-noise generator.

Call or write today for more information. Map II - \$1670.

# Dymek AM5 Tuner: Worth Talking About

# Here's what your colleagues say about our new AM5 tuner monitor:

In regard to ... the operation of the AM5 tuner we purchased this past year. the program, production and news staff have been ecstatic. With the AM5 we can show "off air" response up through 15,000 Hz and there is almost no discernable difference when switching monitors from "off console" to "off air." ... I am well pleased ... \$\$\frac{1}{2}\$

Carl A. Lewis
Chief Engineer
KLMS Radio, Lincoln, Nebraska

I am pleased to report that the (AM5) units perform superbly... When the DA5 antenna was connected and... adjusted properly, all interference was reduced and the background noise was almost as low as an FM station.

Arthur F. Marko

AM Engineering Supervisor

WOR Radio, New York

We are exceedingly pleased with our AM3 and AM5 tuner. The output quality and separation. etc. are excellent ... We have used your tuners extensively for monitoring and recording, and have found them to be superior to anything else that we used in the past.

Harry H. Curtis
Manager Technical Operations
American Broadcasting Company

The AM5 is an excellent inexpensive AM monitoring tuner. That's why 35% of Dymek sales are to radio stations. Special features such as less than 1% distortion, the best ceramic filters, solid state construction, and the 150-600 ohm option have made the AM5 the choice of AM broadcasting stations in the U.S. and Canada.

Try the AM5 Receiver and its Companion DA5 Antenna on a 30 day trial basis. Call toll free.

# **SAVE MONEY AND ENERGY** TOO!

### **BUY YOUR ONE KILOWATT SOLID STATE AM** TRANSMITTER FROM SINTRONIC

You get all the energy savings and improved reliability that solid state technology guarantees and a transmitter loaded with extra features. The circuitry is on 27 front-access plug-in cards (even the PA). Panel meters and a digital multimeter monitor all critical circuitry. It has synthesized frequency control, and 125% positive-peak modulation capability.

The output power is monitored and automatically maintained at the correct output power. Remote control capability, a switchable 7.5 kHz low pass filter and negative peak clipper are standard.

You will like our price too!

# **IPER SYSTEM**

RTS Systems introduces an innovative new intercom system for teleproduction communications in studio and field. With Super System Phase III, we've incorporated a number of advances which mark a significant increase in product versatility

Our new design features the portability of 12 volt battery power and the convenience of dry-line operation. The system can be arranged with up to 50 various user stations on line, and may be coupled to existing communications lines using our new RTS interface devices.

Phase III offers impressive capabilities like powerful headphone amplification, two (or more) channel operation, microphone level limiting, and stable sidetone level. The new units are handsomely packaged and completely field serviceable.

With increased flexibility, improved circuitry, and greater reliability, our Super System represents a new development in meeting the demands of modern teleproduction. For additional information, contact RTS Systems, Inc.

# eliminates the source of EMI noise.

'Extreme corrosion of steel guys and electromagnetic interference, due to arcing, were two very severe problems when we purchased WYFR.

We installed PHILLYSTRAN on all nine broadcast antennas at Hatherly Beach. eliminating the source of EMI noise.

"We were pleasantly surprised by the ease of re-guying and the way PHILLYSTRAN reduced the labor involved to make our non-metaltic guying systems competitive -on an installed-cost comparison-to conventional metal guys."

See US at NRBA Booth 502

Art Thompson. Station Manager WYFR. The International Voice of Family Radio Oct 7-10 Scituate, Mass.

PHILLYSTRAN Tower Guys are · non-conducting · maintenancefree • easy-to-install

### **AUTOMATIC PROGRAM LOGGING**

Keep Your Station's Log Automatically

• FCC acceptable logs • Design your own format

The H&F Program Logging System can automate the task of keeping accurate and easily readable program logs. The logs are printed as the programs are run so you know just what was aired and when. The system works with most existing automation systems including those by IGM, Schafer, Harris and Sparta. Call us about yours.

### Modular tape components and electronics

# Your **Customized Tape System** Source

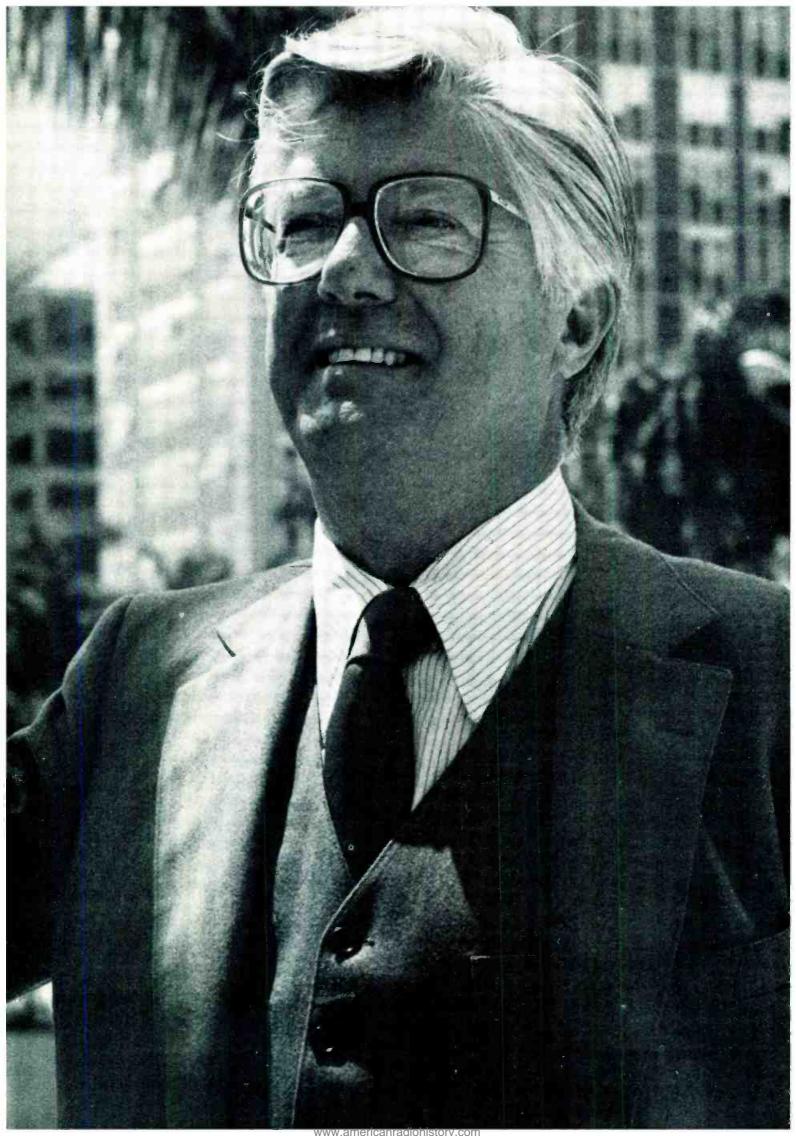

If you are designing a tape system for broadcasting, industrial, medical, military or other professional installations, Telex tape components provide enormous design flexibility. These components, designed for heavy-duty applications, are made in U.S.A. guarantying the continuing availability of parts.

Complete information on all products is available. Write for details today.

# REMUNICIA

Ralph Renick is Vice President for Television News Operations, Wometco Enterprises, Inc., and may hold the record for years of service as news director of the same TV station. He's held that post at Wometco station WTVJ. Miami, for 29 years—which certainly qualifies him to speak knowingly about news gathering and news dissemination.

"Miami is one of the most competitive markets in America. We have good television news here and good newspapers. The standards are high, and the public has come to expect good performance. Competition is healthy, It causes us to have a better staff, to spend more money to keep pace, and to go beyond simply reacting to news—to go out and anticipate what people will want to know about.

"We're in a tropical paradise here. We have sun, water, the Everglades, lots of nature—a nice environment. People coming here look forward to a lot; but human nature being what it is, there is a tendency to gripe and complain when expectations run higher than reality. This can create a lot of negative

thoughts. So in our news and in our editorials we try to give people confidence in the place they live in. Things aren't all bad...guess what happened today...here's what you can do at no cost this weekend...482 places to go and attractions to see... In the course of handling the news we try to lessen human anxiety and give people a feeling of hope. We give them a kind of renewal of feeling good about themselves and their community.

"We've maintained our film capability, because not to do so would cut off some sources of news illustration. All our news photographers have CP-16 film cameras assigned to them. The handy thing about film is that the photographers can keep these cameras with them all the time, even take them home—they're so portable. Then if we need coverage in a hurry, we can call the photographers at home, and they don't have to spend a lot of time driving to the station to pick up their gear. They're always ready.

"We cover news from Key West to the Bahamas, so we depend on stringer correspondents in distant areas. They send their stories in on film. "Our public affairs show, Montage, is shot on film for another reason—our news photographers and editors simply feel they can achieve things on film they can't do any other way—they get a 'look,' a 'feeling' they like.

"Administration consumes more of my time than news work; and that's a little unfortunate, because being a news director is a little like being a fire chief, you know. You'd rather be out there chasing fires than watching the firemen. I still like to keep my hand in, putting out the flames."

In our publication, TELEK, broadcasters talk about their experience, and we tell you about our latest technical and product developments. If you would like to be on our mailing list, write: Eastman Kodak Company, Dept. 640, Rochester, NY 14650.

EASTMAN KODAK COMPANY ATLANTA: 404/351-6510 CHICAGO: 312/65-4-5300 DALLAS: 214/351-3221 HOLLYWOOD: 213/464-6131 NEW YORK: 212/262-7100 ROCHESTER: "16/254-1300 SAN FRANCISCO: 415/928-1300 WASH., D.C.: 202/554-9300 © Eastman Kodak Company, 1979

Kodak...Official motion picture consultant to the 1980 Olympic Winter Games.

Two reasons.

First, when our CentraCart™ System is for sale, you're going to be in for a few surprises. The cartridge itself is unlike any you've ever seen before. And that's good, because we found out real quickly that many of the flaws in today's cartridge systems are due to the basic imperfection of today's cartridge design.

Our cartridge contains virtually no moving parts. And it allows the tape to pass across the center of the cartridge, instead of the front of the cartridge. As a result, tape tension is more constant, tape wear is minimized, and signal stability depends more on the capstan and less on the cartridge.

We improved the rest of the system, too. The record unit and the playback units. But the cartridge is where you'll really notice the difference. It's a clean break with tradition and, frankly, we want to give you plenty of time to get used to the idea.

Second, we're promising a whole new era in radio cartridge systems with the introduction of CentraCart." Finally, after

fifteen years of sound engineered for the '60's, you'll be hearing sound engineered for the '80's—cartridge sound comparable with reel-to-reel sound. That's quite a promise. And we want to be sure, before we sell a single CentraCart™ System, that it's ready to live up to that promise.

For quality performance, outstanding service, and ease of ownership...

# Freelance cameramen choose MNC-7ICP!

For enterprising freelance TV-news/documentary cameramen who prefer the advantages of <u>owning</u> their equipment, going ENG involves a crucial hardware decision. With little margin for error.

The ideal choice, of course, is our reliable and versatile MNC-71CP. Delivering outstanding broadcast-quality performance at a very reasonable price. And with Cinema Products' reputation for responsive after-sales backup and meticulous service, freelancers couldn't do better!

We offer complete camera/lens and accessories package deals — including Steadicam — to meet your every requirement. And our exciting "state-of-the-art" lease/upgrade program is tailor-

made to ease the financial strain, allowing you all the benefits and tax write-offs of equipment

ownership, with
payments substantially lower than the
prevailing monthly
rental rates. With built-in

Special Steadicam/MNC-7ICP Offer

For a limited time only, we are offering a special package deal consisting of our Oscar-winning Steadicam videolfilm camera stabilizing system and MNC-71CP ENGIEFP video camera plus co-ax control. For further information and prices, contact Don Dunbar, Director of National Marketing.

All this plus the entire Cinema Products video service department at your beck and call...24 hours a day, seven days a week.

Plus a full one-year warranty, with no service charge ever for warranty work.

Plus a national network of MNC-71CP dealers with "stand by" loaner/rental cameras, so you need never worry about missing out on an assignment!

With 1980 already shaping up as a hectic TV-news year — what with the presidential primaries and national elections generating extra coverage

all over the country — make sure you are ready with all the video equipment you need to secure your share of free-lance TV-news/documentary assignments.

Buy or lease your MNC-71CP now, and start reaping the benefits of ownership immediately!

For full details, call toll-free: 800-421-7486.

# Now! For heterodyne VTRs

# a broadcast quality, digital TBC

It's the CVS 516, first digital TBC made and priced to give users of non-segmented, heterodyne VTRs all the proven advantages of modern digital video processing.

The CVS 516 is ideal for ENG, teleproduction, studio VTR backup and much more because it has features that, before, you'd find only in TBCs costing up to twice as much.

Correction of chroma/luminance delay problems, a chroma noise reduction of 3 dB, velocity compensation and color dropout compensation are all standard. So are a broadcast stable, gen-lock sync generator and a built-in, completely adjustable processing amplifier.

The 516 also includes circuitry to closely control FCC blanking problems. For example, it combines exclusive CVS Gyrocomp memory organization with a 2 line (or optional 16 line) memory, automatic VTR advanced sync and available H and V blanking adjustments. The result is complete control of output blanking.

Simple operation is another plus. Front panel con-

trols give you total mastery of your video signal. Each control also has a preset unity position to give you a consistent starting point for all your tapes.

If all that's not enough, add our optional, moderately priced Image Enhancer/Noise Reducer. This plugin card substantially reduces luminance and chroma noise, and significantly improves subjective resolution.

The CVS 516 weighs only 35 pounds, stands just 3½ inches high and uses only 175 watts—major advantages with today's increased emphasis on ENG and field production.

So, to give your heterodyne productions the quality they deserve, get the one digital TBC made and priced to do the job—the CVS 516.

For full details and/or a demonstration, contact your Authorized CVS Distributor, or CVS, today. Also, be sure to ask for our popular booklet about the basics of digital time base correction, and a reprint of the article "TBCs, Blanking and the FCC."

# You already own the most important part of a Convergence tape editing system.

In video tape editing, there's no substitute for your talent. And there's no better way to complement it than with a Convergence Superstick Editing System.

Add your skills to our system, and watch your ideas take shape on tape easily and accurately. Try our ECS-103 for example, a versatile approach to both single and multi-source editing. Use it for everything from simple cuts to stunning special

effects. Put it to work with different formats. Edit on-line or off-line with ¾" cassettes and 1" Type C reels. Experience a new dimension in efficiency. And get your concepts implemented on time and within budget.

The ECS-103 tops our line of people-pleasing, computer based editors. Just add your talent, and you've got a complete system. For details, use the reader service card or contact:

Hum bucking coils, RF inductors, transformers VS

# FIDELIPAC cartridges give you a proper

Somebody else's will just give you fits.

It's simple. A broadcast cartridge should seat properly in a broadcast cartridge machine. But too many don't.

VS

Fidelipac cartridges do. Fidelipac Model 300, 350 and Master Cart cartridges all conform precisely to NAB AA standards for both overall width and thickness.

So you get proper alignment with the tape heads in your machines. And proper sound from your machines. With less wow and flutter. Less mechanical noise. And fewer carts that go bump in the night. Or on the air.

So the choice is obvious. Get a proper fit with Fidelipac cartridges. Or have a proper fit with somebody else's.

# **Iseful Bits of Dat**

Skotel Time Code Generators and Readers will conveniently and accurately identify audio and video tapes with SMPTE User Data.

The TCG-80N Generator has unique features that meet the growing demand for identifying tapes with start of program sequences, scene/take numbers, official time of sporting events, time countdowns and documentary data.

The User Data memory can be loaded from the thumbwheels or from an external source, and the Data and Time code is displayed on the front panel.

Another feature that can be added to the Generator and Reader is our video character generator. It has an integral insert keyer that can simultaneously insert User Data and Time code into selected positions in the video of a work print or on a monitor.

time because it reads User Data and Time code from hand turn reel speed to 40 times play speed.

If we have all this, you can count on Skotel to include all the other features you require in Time code Generators and Readers.

For complete details and application information call...

### Announcing the New PW-200 Pulse Width Measuring Set

The PW-200 generates precision markers which are locked to either station sync or to incoming video. These markers are inserted into incoming video for viewing on a standard B&W picture monitor or television waveform monitor.

VERTICAL or HORIZONTAL mode is selected via front panel switching and front panel controls are used to adjust the position of the markers to the start and finish of the pulse to be measured. The time between markers is computed by the internal 10 MHz clock and is numerically displayed on the LED readout.

### STANDARD PW-200 FEATURES INCLUDE:

- Internally generated pulse-cross-allows measurements to be made on any standard B&W monitor.
- Separate, non-interacting controls for vertical and horizontal rate measurements.
- Two isolated outputs—one for pulse-cross monitor display and one to feed a waveform monitor with markers inserted into the video

# THE UNCOMPLICATED CONSOLE

Compare the sensible panel layout of these broadcast mixers to the cluttered array of tiny buttons, midget knobs and closely spaced faders on other mixers costing much more. Ours are easier to operate and understand.

Compare the sensible electronic packaging, with only 2 kinds of electronic modules used. That's redundancy! Plus, such standard features as 4 inch log taper slide pots, selectively illuminated VU meters, mono output, electronic audio switching, 2-way remote control and, of course, our furniture quality oiled walnut end panels and armrest.

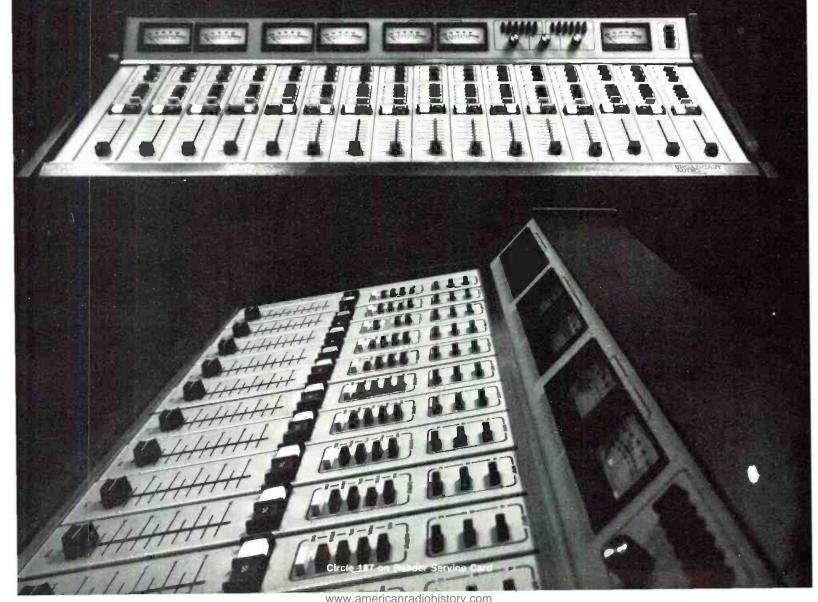

Three expandable models to choose from: SYSTEM 16 (illustrated) is priced at \$8,250 with 8 mixers (expandable to 16) with 3 metered stereo outputs and 1 metered mono output. Additional mixers \$365 each. Delivery? Stock to 3 weeks.

**GET UNCOMPLICATED!**

VS

The CL42S reaches farther and rejects more ambient noise than any other shotgun of its size ever made. Our exclusive line bypass port makes it more directional at low frequencies so you won't have to sacrifice frequency response when you use it on a boom. Diffraction vanes maintain high-frequency directivity to preserve uniform frequency response if the "talent" gets a little off-mike.

Phantom or AB powered, the CL42S comes complete with windscreen, shock mount, carrying case and handle for hand-held applications. And it's rugged. than a mini shotgun mike - in a package that's only 4 inches long that weighs less than 6 oz. Specially designed for boom and fishpole use in TV and motion picture studios, but equally at home wherever working space is small and you have need for a compact, highly directional microphone.

Compatible with phantom or AB power. the CH15S comes complete with windscreen, shock mount and carrying case. And, this microphone is rugged.

### The Electro-Voice Warranty

Electro-Voice backs up these two microphones with the only unconditional warranty in the business: for two years we will replace or repair your CL42S or CH15S microphone, when returned to Electro-Voice for service,

# **DYNAMIC NEW DIMENSIONS IN VISUAL PRESENTATION —with General Electric Professional Large Screen TV Projection**

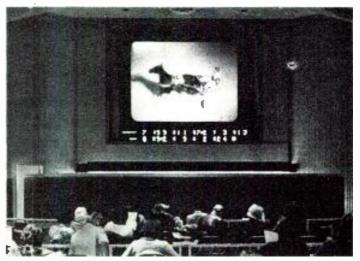

IN BUSINESS-General Electric projectors display real-time computergenerated data for Merrill Lynch Government Securities, New York.

General Electric professional large screen television projectors—displaying color or monochrome pictures up to 25 feet wide—bring new dimensions of presentation impact to a broad spectrum of applications.

A wide choice of new and improved color and monochrome models is available to meet specific requirements for television display applications, in standard or high brightness, for various scan standards.

The color projectors utilize General Electric's exclusive single optical path light valve. All color information is projected simultaneously in one light beam. This system eliminates time-consuming registration of three separate images, which is required for all other color television projectors.

These projectors can display any size television picture from two feet to 25 feet wide, with high resolution and contrast over their full range of light output.

IN ENTERTAINMENT-General Electric color projector brings large screen race action to Ontario Jockey Club, near Toronto, Ontario, Canada.

Among the primary applications of the projectors are:

Medical and Dental Education. Technique and procedural training.

**Business.** Sales meetings, industrial training, product presentations, real-time display of computer-generated data, teleconferences.

Aerospace and Defense. Situation displays, simulator training.

**Entertainment.** Theatre television and closed-circuit TV events, overflow crowds, discotheque special effects.

**Television Production.** Backgrounds for news programs, special effects, data display, program previewing.

Call or write: General Electric Company, Video Display Equipment Operation, Electronics Park 6-206, Syracuse, NY 13221. Phone: (315) 456-2562/2533/2179.

# 12X.18X.25X. 700M!

And over a dozen other ways to make any camera look its best.

Whatever your camera, production goals and budget, it pays to talk to Canon first. Because we offer you more to choose from. And more *value*, whatever your choice—in full servo or manual models for ENG/EFP, studio or field.

To give you greater versatility, there's the widest choice of focal lengths and longest zoom ratios. For greater sensitivity,

larger relative apertures. For flexibility, shorter MODs, lighter weight and more compact size. (Often, at a surprisingly compact price.) All, backed by fast, *dependable* factory service.

Whether you're buying a new camera or upgrading your present one, give us a call.

And discover why more people begins on Canon.

Otari's new MX-5050-B continues the proud heritage of the MX-5050 Series, a recorder now extensively used by television and radio broadcasters worldwide. The new version has all the proven features of the earlier pace setter, including front adjustable bias and record EQ, built-in test oscillator, edit and cue, splicing block, motion sensing, selective reproduce, and adds many new features all its own: ultra reliable TTL switching, noise free inserts, three speeds in field-selectable pairs of 15/71/2 or 71/2/33/4 ips, 24 dBm headroom with 28 dBm output into 600 ohms, dc capstan servo with ±7% speed control (to match program length to a time slot), peak reading LED plus standard full sized VU meters, return to zero memory, and LED function indicators, among others.

Add these features to a 66 dB S/N ratio and a frequency response from 30 to 22,000 Hz ± 2 dB at 15 ips and you have a machine that competes with those costing thousands of dollars more.

Compare features and benefits, compare performance, compare our track record for reliability. Call Ruth Pruett at 415/593-1648.

# BY FM: QUALITY CALL

These stations, and many others, broadcast Dolby FM. Their engineers know the difference Dolby FM makes in sound quality, and their managers know how widely recognized the name Dolby is among today's sound-conscious listeners.

But not everyone has heard the difference Dolby FM can make. That's why at the NRBA convention Dolby Laboratories will be conducting brief demonstrations of the D FM system.

Hear the difference for yourself. Discuss with us the sibility of your proadcasting Dolby FM experimentally, out obligation. In time you too may want to add your letters to the growing list of Dolby FM broadcasters.

Hear the difference: Dolby at NRBA Washington D.C. October 7-10 The Dupont Suite, located on the Terrace Level, one floor above the Exhibit Hall.

'Dolby' and the double-D symbol are trademarks of Dolby Laboratories 731 Sansome Street, San Francisco, CA 94111 Telephone (415) 392-0300. Telex 34409

A second generation recorder incorporating all the field-proven Otari features plus several new items of special interest to broadcasters. These include: modular transport and electronics for convenient console, rack or portable mounting, plug-in cards for ease of maintenance, splicing block, complete accessibility to all electronics adjustments for fast bias and record/reproduce alignment, variable speed (±7%) dc capstan servo to precisely match program length to a specific time slot, and interface jack for dbx or Dolby noise reduction switching. Standard Otari features include true professional quality and reliability, motion sensing, selective reproduce on all channels, 19 dBm headroom, XLR connectors, edit and cue, and built-in test oscillator. Available in two-channel 1/4-inch or four-channel 1/2-inch models.

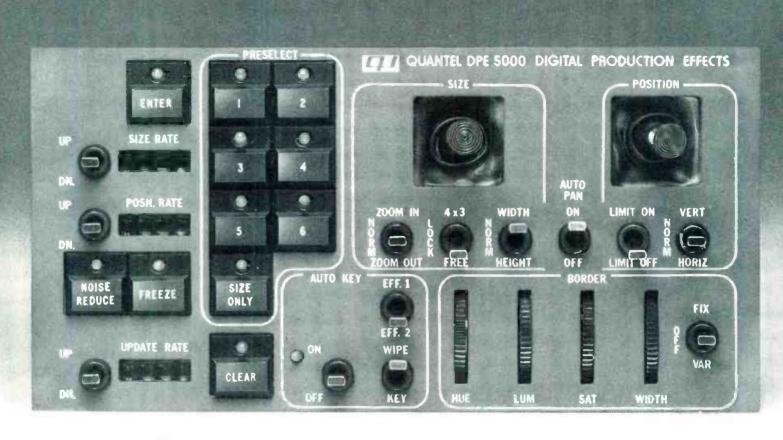

**Compare** features and benefits, compare performance, compare our track record for reliability. Call Ruth Pruett at 415/593-1648.

Production control panel of the DPE 5000

# SOME PEOPLE GIVE YOU DIGITAL EFFECTS. WE GIVE YOU DIGITAL EFFECTS WITH OPTICAL QUALITY.

There's good reason why the Quantel DPE 5000 is the world's most widely used system for digital effects: optical quality.

The DPE 5000 produces effects that are smooth, realistic, virtually indistinguishable from optical effects. Good enough to be used live on the air. With confidence.

A full-fledged minicomputer and several microprocessors handle millions of digital manipulations that make Quantel effects more camera-like.

And our unique production control panel, shown above, gives the operator "extra hands" to smoothly control operation and bring into play the marvelous range of DPE 5000 effects. Automatic functions, programmed routines, and fail-safe limits simplify control

and eliminate constant planning and anticipation.

With the DPE 5000, you can actually expand the power of your switcher. (It can be easily interfaced to *any* switcher.) You can preselect effects—shapes, sizes, positions, even transition rates from one effect to the next.

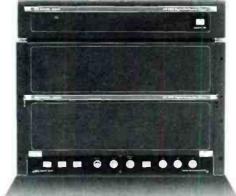

Using optional NO-BLANK noise reduction/

blanking correction feature, you can salvage tapes that don't meet FCC blanking requirements.

The net effect of Quantel digital effects is a better, more exciting picture on the air—and a better, more rewarding bottom line.

For more details, call your nearest MCI/Quantel representative. Or get in touch with us directly: Micro Consultants, Inc., P.O. Box 10057, Palo Alto, California 94303, 415/321-0832.

Widely used in leading automation systems. Specifically designed to meet their stringent requirements for highest audio performance. long term reliability and around-the-clock operation. Basically, the ARS-1000 is a work horse two-channel stereo reproducer with two tape speeds (71/2 and 33/4 ips) and the following features: heavy duty 19-inch top plate, head mounted pre-amp to minimize hum, RFI and yield superior S/N, special long-life polyurethane pinch roller tire, friction reducing ball bearings, heavy duty motor and brake assemblies, and gold plated PCB connectors. It's easy to maintain with its plug-in PCB's and mother board configuration. easy-access flip-up head cover, and front adjustable output level and head azimuth (to minimize stereo phasing errors). Its operating features include remotable Play and Stop, a ready light to indicate proper tape threading, head lifters for fast modes, a cue control for audible monitoring, and optional 25 Hz cue tone sensor. All connections are brought out to a single 25 pin Cinch connector.

**Compare** features and benefits, compare performance, compare our track record for reliability. Call Ruth Pruett at 415/593-1648.

# What's your angle of view?

Attention: Cameramen,
Directors, Engineers.

Varotal MRL is a multi-role lens. It is designed to give you all the shots you need, inside studio or out, with standard or EFP cameras. It's the world's smallest and lightest production TV zoom lens, yet delivers a range

of angles 52°-1°.

Most important MRL lens specifications are studio quality. There's no need to compromise sharpness, focus or contrast for weight and utility. With MRL you can expect, and get, production quality that is deserving of your credit line.

Discover the flexibility, versatility, and economy the quick change artistry—of Varotal by Taylor-Hobson. TAYLOR-HOBSON

MRL has snap-on front units—one for studio, one for outside, and one for all-around use; and, there's no need to re-register or re-set the back focus when you change lenses.

Send for 12-page Bulletin MRL.

260 North Route 303 West Nyack, NY 10994 (914) 358-4450

Eight Ikegami HK-312 studio color cameras are in service at WGBH, Boston, some dating back to October 1977 — long enough for intelligence on their performance. From recent interviews with key WGBH people, read these excerpts.

#### Pops without noise

Tom Keller, Director of Engineering:

66 The HK-312s have such high sensitivity that we were able to reduce significantly our light levels at the Boston Pops and Symphony telecasts. Yet, despite the major light reduction, we experienced no visible noise with the HK-312s... With their remarkable reliability record, we can depend on 6 cameras for 6-camera coverage, and not 7 for 6 as in the past. After all, you can't stop a live orchestra performance for a retake if you've lost a camera.

## 2 IRE, but a complaint

Ken Hori, Senior Engineer for Advanced Development:

66 We tested several camera makes for RFI within a quarter-mile of a 50 KW radio transmitter. The HK-312 measured 2 IRE, whereas most others were in the 5 to 7 IRE area, and some as high as 20 IRE... For symphony remotes we'd need 2 to 5 hours for warm-up, but nowadays we're set up in less than an hour... We like its straightforward design — example, its truly high signal-to-noise ratio as compared to other cameras that resort to reduced bandwidth to attain a comparable ratio but wind up delivering noise too... 99

We did get one complaint from the maintenance crew. They said that because they rarely found the problem of a down HK-312, they would never get to know the HK-312 well enough to fix it.

# Washouts and dropouts

Bill Fairweather, Video Control Engineer:

66 During a lighting seminar staged here by Imero Fiorentino Associates, an actor in a normally lighted scene held up a sheet of white paper with printing on it to show loss of detail in the case of more than 60 percent to white reflectance. The HK-312, however, was able to retain enough detail for the printing to be readable on the monitor.

Next came a demonstration of the dangers of too much or too little light on a chroma-key background. The HK-312 held the key to such a low light level on the blank background that the lecturer grinned and said, "I guess WGBH has pretty good cameras!" and went on to the next subject. ?

The HK-312 is the camera that met WGBH criteria for performance, stability, and reliability. They also have HL-53s, high-performance portable cameras that interface with HK-312 CCUs and can operate portably with their own CCUs.

Adapters for triax cable, using digital techniques, make their cameras remote-usable at nearly a mile from base stations, yet easily revertible to multicore cable whenever needed.

In daily use, their HK-312s and HL-53s are interfaced with microprocessor-computer control units that automatically cycle them through all set-up adjustments, including black-and-white balance, flare and gamma correction, video gain, and eight registration functions, then recheck all those adjustments — all within 45 seconds. The cameras can also operate independently of the set-up computers, a feature that is an Ikegami exclusive.

If all of this suggests that the HK-312 is probably the best studio/field color camera in the industry, consider this: camera, set-up computer, and triax adaptor are not only operational, they are deliverable. For details or a demonstration, contact Ikegami Electronics (USA) Inc., 37 Brook Ave., Maywood, NJ 07607, (201) 368-9171 / West Coast: 19164 Van Ness Ave., Torrance, CA 90501, (213) 328-2814 / Southwest: 330 North Belt East, Houston TX 77060, (713) 445-0100.

# Ikegami HK-312

# Eight good reasons to be a Beyer Buyer.

The first reason is Beyer. We have fifty years experience making the world's finest microphones and headphones. And an unmatched reputation for quality, reliability and innovation. The choice of professionals everywhere.

two M160. One of the world's best-loved and most versatile microphones. Warm, soft sound

favored by vocalists and musicians alike. Dual ribbon design for high strength and fast transient response.

three Beyer headphones. A full range of high quality professional models for critical monitoring and reliable communication. DT 109 combines stereo headphones and boom-mounted microphone, ideal for on-air use and disco deejays. DT 444S wireless headphone re-

ceives sound from an infra-red LED transmitter up to

five Beyer microphone stands and booms. A full range of mic mounts for floor and desk use, with fixed and folding bases. Available with collapsible tubes for easy packing. Also heavy-duty stands for speaker cabinets. **Six** Beyer microphone accessories. Wind screens, impedance matching transformers, in-line switches, power supplies, wireless transmitters, stereo arms, goosenecks, clamps, thread adapters. anti-shock suspensions, and even a mic stand ashtray! The whole works. If you can use it with a mic, we make it.

300 feet away. Full 20-20,000Hz frequency response. Six hour stereo operation on rechargeable NiCad batteries.

four The new M 400. A great performer's mic. Supercardioid pick-up pattern to minimize feedback. Rugged design for long life. Tapered frequency response with rising high end and rolled off lows, plus midrange presence boost. Built-in humbucking coil and pop filter. Dynamic design is unaffected by heat and humidity.

We're looking for a few more great dealers to handle the Beyer line. Contact Norm Wieland at Burns Audiotronics

One of our unsur-

passed studio condenser

mics. Modular system; accepts different transducer capsules and power supplies. Gold-vapored mylar diaphragm for high transient response. Mumetal shield. Temperature and humidity stable.

> eight See your dealer or write for information on our product line. You'll have many more reasons to be a Beyer buyer.

# INDEPENDENT BROADCAST *REPS/DISTRIBUTORS*

# **Including cross reference to companies** whose products are advertised

Information regarding the representatives and distributors listed in this section was supplied by the manufacturers listed in the preceeding section. Some others are listed by virtue of their reputations within the localities they do business. This section may be most effectively used if the following points are kept in mind: 1) The product line attributed to each representative is very general. In most cases these reps/distributors carry the products of a number of manufacturers and may carry a broader range of products than the "line" may imply. 2) The advertiser's name which appears below the listing can be used as a guide to the dealer handling the specific product sought, and as a guide to more information on the product(s) referred to in the advertisement. 3) If no local dealer can be found, a call to the manufacturer of the product sought may be the quickest way to identify a local supplier.

# The Editing System for All Reasons.

MACH ONE takes you a step beyond any other computerized video tape editing system now

MACH ONE is more versatile, faster and gives you greater list management capabilities.

MACH ONE's dedicated keyboard is editor-oriented and offers one-button commands that eliminate non-essential computer communication which cuts into your editing time. MACH ONE can be used on-line or off-line with 2" quad, 1" helical or 3/4" cassette recorders.

MACH ONE is the only editing system capable of switching between and editing 24-, 25- and 30-frame-per-second formats. MACH ONE provides a total range of

editing freedom with full effects generation and automatic assembly operation.

MACH ONE's space-saving, single-rack electronics are instantly expandable to upgrade your system from a simple, two-VTR, cuts only to a fully-equipped, six-VTR operation.

MACH ONE includes a one-year package of software updates.

To find out for yourself all the reasons why MACH ONE is the final solution to fast, accurate and efficient video editing, write or call TeleMation Division, P.O. Box 15068, Salt Lake City, Utah 85115 (801) 972-8000

# We interrupt this magazine

One call is all it takes to get anything and everything you need in broadcast equipment — from turntables to AM and FM transmitters.

Choose from Rockwell-Collins equipment plus that of close to a hundred different manufacturers. It's one-stop shopping with fourfold advantages.

1. Quality products. Our transmitters and consoles are the result of our technical excellence and single-minded dedication exclusively to the radio broadcaster for over 40 years. We've never once deviated from our goal: to make our name synonymous with quality, reliability and long life ... for your benefit.

2. Broad choice of products. In addition to our own Generation 4<sup>®</sup> FM transmitters and our all-new Power Rock 5-kW AM transmitters (the cleanest,

# to bring you all you need in broadcast equipment.

brightest, loudest AM in town), we carry products from the largest team of respected specialty vendors available anywhere from a single source — from ADC to UREI, with nearly a hundred other such leaders in between. If we don't have what you want, chances are we can get it for you. Fast.

3. Flexible financing arrangements. If it's under \$1000, you can use your own or your company's Master Charge. For larger orders, take your choice of time-purchase (up to 5 years) or lease plans.

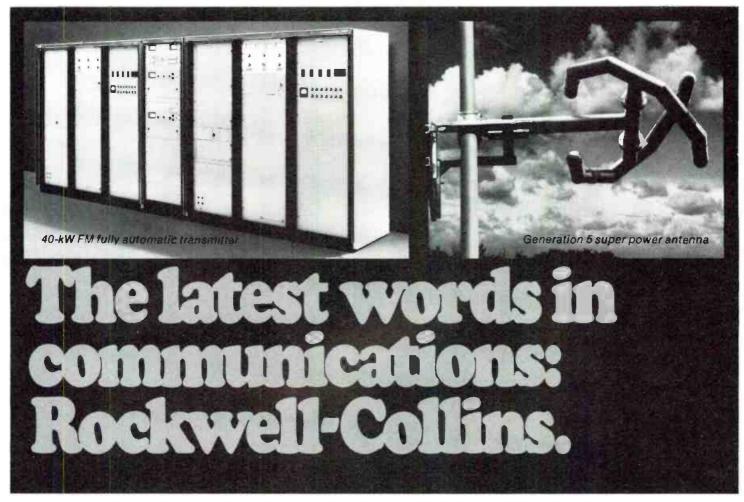

4. Unbeatable customer support. Your emergency is our emergency. We're ready to respond — without delay — 24 hours a day, 365 days a year.

See the cities listed below for the representative nearest you — and call him for one-stop shopping, Rockwell-Collins style. Ask him for a copy of our new brochure, or contact: Collins Broadcast Marketing, Dept. 406-106, Electronics Operations, Rockwell International, Dallas, Texas 75207.

Phone: 214/996-5424.

that totally destroyed our East 46th Street Superdupe and SDC Recording Studio complex last year," says Herb Gordon, studio owner. "Almost before the wreckage cooled and the insurance adjuster completed his work, I was already planning the equipment purchases we would need to get back into business."

"In all the years we had the Auditronics 501 consoles prior to the disaster, I don't remember anything going bad. Our purposes were well served by our old 501s, so I went back to Auditronics the week after the fire to order three more of the latest model 501s."

Herb Gordon and over 300 other satisfied users of Auditronics mixing consoles have learned much about Auditronics performance, quality and reliability since we delivered our first 501 back in 1971. If you would like to know what they know, call or write for complete product information and the name of your nearest Auditronics dealer.

# **WE CAN BE AS FLEXIBLE AS** WE WANT TO BE, AND WE'RE **COST-EFFECTIVE ALLTHE WAY"**

Doug Lane operates two fine radio stations in Scranton with just one fine broadcast staff, two Cetec System 7000 automation systems, and a minicomputer-based station business system. And a lot of creative management.

"Our System 7000s let us do the things we want to do in broadcasting in a cost-effective way," Doug Lane says. That means almost unlimited program flexibility, live, remote sports and news coverage, seven days of programming "memorized" in advance, consistently superior audio quality. Network "joins" and "cutaways" that are clean and precise. Voice tracks recorded within minutes of on-air time. Automatic logging/printing of every broadcast event.

And with an SBS system handling most of the business paperwork, Lane Broadcasting is an outstanding example of digital electronics as a partner in good broadcast management.

Fifteen people operate two radio stations with topquality style and versatility. Thirteen of them operate the System 7000 keyboards. Small wonder that WWDL-FM and WICK-AM are getting so much attention from listeners. And advertisers. And radio broadcasters from across the nation.

It's a "quality in, quality out" operation. Doug Lane directs the programming quality and content. The twin Cetec System 7000s take it from there, following orders with precision, clean audio, and that remarkable Z80based controller.

System 7000 can open new programming horizons for any radio station. Write or telephone today, and ask us to prove it.

Just a few short years ago, few people in the industry even knew our name. Let alone, what we stood for.

Then we introduced H701E—the low noise, high-band broadcast videotape that gave the industry a whole new set of performance standards. And Beridox. A videocassette tape formulation combining

the best features of chromium and ferric oxide.
Now available in one-inch, as well.

Now, it seems a lot of people are standing in line for our products. Because they know—and like—what we stand for.

Fuji. Count on us to im-

prove your image. For more information, write or call.

# **Stressing Quality**

The Orange County VS-1 Stressor belongs in your AM chain, working quietly and reliably, as well as in your production studio, helping you produce powerful spots and promotions. And for "D.J. mike" enhancement, the VS-1 will give you extraordinary punch and impact on the air.

- Ultra-fast peak limiter with 250:1 slope for absolute overmodulation protection
- Compressor with adjustable ratio, threshold, attack and release times, for loudness enhancement
- Highly effective expander/noise-gate for noise reduction
- Powerful parametric equalizer
- Adjustable limiter asymmetry for positive peak modulation
- Performance specs and construction to the highest industry standard

Also investigate the VS-2 Stressor, which offers internally pre-set functions for the budget-conscious station looking for great sound.

# SIGNAL PRUGESSING FOR BROADCASTING'S NEW PHASE

# Original designs from audio & design recording

## F760X-RS Compex-Limiter

- Separate peak level limiting with
- Multi-ratio variable threshold compressor and noise-reducing low level gain reduction from
- Expander with gating option

#### **E560 Selective Limiter**

- ADR unique product
- Band splits with integral, fullfunction limiter
- Can provide 75μS variable pre-emphasis
- · Rack mounting and self-powered

#### F600 Broadcast Limiter

- Stereo/dual mono operation
- Integral power supply
- System bypass on each channel
- 10μS-25mS attack
- 25mS-3.2 secs and 'auto' release

Contact Nigel Branwell, ADR, P.O. Box 786, Bremerton, WA 98310 (206) 275-5009

Providing the international audio industry with clean, quiet, dependable Signal Processing for more than 15 years.

Excellent specs. Exemplary sound. Definitive practicality.

Circle 218 on Reader Service Card

Because while we're saving you money we're also giving you today's most desired production features. Like two Mix Effects Systems that utilize our exclusive shared pattern generator. Which enables mix, wipe, and mix or wipe key (with 'matte' key and key invert)

And our 'rotate' pot that lets you create hundreds

of standard and special wipes from the seven basic

Need adjustable and variable hard, soft, and bordered edges? It's standard on the 902 along with

pattern modulation, electronic spotlight, positioner,

We don't stop with features, either. With ten tallied inputs (including blackburst/colorizer), true Mix Effects re-entry, and separate program and preview output

switching busses the 902 gives you big board' flexi-

Last (but certainly not least) The 902 carries ISI's two hundred units delivered and in the field, one of

the industries best service records. When you add it all up, it all adds up to 902!

For the name of your nearest authorized ISI Video Products Distributor call: 800-874-7590 (Toll Free).

904-373-6783 (Florida Only)

## Change Sound to Silence witha

## **TABERASE**

This rugged, heavy duty bulk tape eraser wipes sound from all magnetic tapes, cartridges, cassettes and magnetic film stock; handling up to 2".

It erases with minimum residual noise because the field automatically diminishes at the end of each 30-second cycle. A thermal control and blower keeps the unit below 71° C.

Available for 60Hz or 50Hz operation.

## Amber 4400A: for the broadcast engineer on the spot.

AMBER 4400A MULTIPURPOSE AUDIO TEST SET. Designed to provide virtually every test and measurement function you need in a single, sophisticated, integrated instrument. Its performance equals or exceeds competitive equipment, at a fraction of the capital expenditure. The Amber 4400A is a proven product used by station and network engineers around the world.

Export: Gotham Export Corporation, New York

Use the Amber 4400A with your oscilloscope to plot the frequency response of a cartridge machine or an STL link: measure the weighted noise of a tape recorder.

Plot crosstalk vs frequency or phase response of a stereo system. Speed up proof of performance measurements. The Amber 4400A makes so much of what you do... so much easier.

The Amber 4400A offers versatility and quality. Its features include sine. function, sweep, tone burst and noise generator; autoranging digital dBm meter and frequency counter; multimode filter; spectrum analyser; frequency response and phase response plotter. High performance: low distortion and high output together with high measurement sensitivity and resolution.

Next to your oscilloscope, perhaps the most powerful test instrument you can

GRASS VALLEY GROUP

## 400 SERIES ROUTING SYSTEM

...solves your signal routing problems with world-famous Grass Valley Group quality, and at a remarkably reasonable price!

And the 400 Routing System specifications are unexcelled! For example, the audio section produces +24 dBm into 600 ohms without using transformers. And the design of the 400 System is totally modular: you

may add to your basic system as needs arise, even adding as little as one output at a time! The cost is low, and the quality the highest; Grass Valley Group quality in the new 400 Routing System.

RADFORD ASSOC 1331 Otter Creek Rd

NAB TYPE AA Cartridge manufactured by ARISTOCART DIV. WESTERN BROADCASTING LTD. 505 BURRARD ST. VANCOUVER, CANADA V7X IM6 TEL: (604) 687-2844 TELEX: 04-54639 We've set the industry's highest standard of cartridge sound reproduction—and we maintain it in every cartridge

With ARISTOCART, quality variation problems and time-consuming selection routines are eliminated. What you tape is what you hear — consistently. Each ARISTOCART is individually tested for phase, frequency response and overall performance. On a properly aligned machine, it will deliver stereo fidelity at least equal to the most sophisticated reel-to-reel equipment. Or we replace it at our expense. Another plus: ARISTOCART's exclusive pressure pad configuration prolongs the life of your expensive head by as much as 100%. So you save significantly on maintenance.

Note to AM operators: ARISTOCART delivers superb mono quality now and incomparable stereo when you convert, without further alteration.

## BROADCAST QUALITY WEATHER RECEIVER

Mod. CRW; 162.40, 162.475, 162.55 mhz.

Take advantage of the expanding network of National Weather Service VHF weather stations. This sensitive, selective (and reasonably priced) receiver can bring you accurate local weather, national weather, weather radar data, emergency alert messages, plus farming and marine information where applicable. Its capability for unattended recording of emergency alert messages and updated forecasts can save time and money. Rebroadcast is FCC authorized.

Receiver is rack mountable, remoteable, with an attractive black anodized panel. Demuting and remote alarm are initiated by 1050 "Alert" tone. A relay closure is initiated by either the 1050 tone or a 1650 hz. forecast update signal tone. These are the only tone signals NWS uses.

Crystal and ceramic IF Filters, plus double tuned dual gate MOSFET RF stage, give excellent interference rejection and high sensitivity (.28 microvolts for 12 db. (S+N)/N.). Whip antenna, jack and terminals for external antennas. One year Warranty.

GORMAN-REDLICH • 6 Curtis St. • Athens, OH • 45701 Phone (614) 593-3150

#### **TV Systems Engineer**

This career position offers you an opportunity to design custom systems for a variety of GVG customers. The individual chosen will have a solid technical background in television systems with good basic circuit design knowledge.

#### **Field Service Engineer, East Coast**

We need an individual to provide after-sales support for our wide variety of complex systems. The position provides travel opportunities within the U.S. plus marketing and engineering career opportunities. An individual with experience designing and/or maintaining television broadcast systems is needed.

#### **Project Engineer**

An excellent career opportunity for an individual to assume responsibility for challenging research and development projects. This position requires video project experience plus a BSEE or equivalent.

The Grass Valley Group offers a state-of-the-art technical environment in a serene rural setting. We are located at the foothills of California's Sierra Nevada mountains, where you'll find a relaxed lifestyle and abundant recreational activities.

Interested and qualified individuals are invited to send a resume in confidence to Val R. Marchus, The Grass Valley Group, Inc., P.O. Box 1114, Grass Valley, California 95945. An Equal Opportunity Employer M/F/H.

The Grass Valley Group

## Perfect Levels Reps/Dists

### ES 214 Dynamic **Audio Level** Indicator

made especially for the broadcaster and recording engineer

#### Features:

- Peak Audio Levels or Apparent Loudness (Fast Averaging)
- Uses Standard V.U. Scale
- High Brightness, 3-Color Display
- Transformer Isolated Input
- Unregulated "Single-Supply"
- High Input Impedance and Sensitivity
- Low Cost

There are a number of Audio Level Indicators using L.E.D. bar graphs on the market today. Their acceptance is becoming widespread due to obvious advantages. However, the ES 214 gives you more: Transformer Isolated Input others consider too costly: A Power Supply Regulator on the circuit board, so you can use any unregulated D.C. voltage from + 15 to + 35 while others require dual supplies; The Standard Scale so you don't have to adapt to new numbers; and, the ability to select Peak Responding Mode or a special Fast Averaging Mode to approximate Apparent Loudness.

> Get a handle on your levels with the ES 214 \$105.00

## Are Your Commercials Legal?

By Frederick W. Ford and Lee G. Lovett; Lovett Ford and Hennessey, P.C., Washington, D.C.

THE AREA OF COMMERCIAL ADVERTISING is one that has presented problems for broadcasters in many instances. The entire area of false, misleading, or deceptive advertising and its regulation has been a sensitive and complex one for both the FCC and the Federal Trade Commission. These two agencies are charged with the supervision of advertising practices. Since two agencies exercise jurisdiction over this issue, it is unclear in many instances where the authority and responsibility for regulating this area lies. In general, the policy of the FCC is (1) not to review the content of alleged deceptive advertising; (2) to refer subjective problems to the FTC, and (3) to take action only in those instances where flagrant violations exist. In addition, the NAB has assumed responsibility for suggesting guidelines for the actions of broadcasters. This article will review the standards set forth by the various bodies responsible for the regulation of advertising.

#### **NAB** codes

Realizing that the area of commercial advertising was unclear, the NAB in 1937 voluntarily propounded guidelines regarding commercial advertising and program content. The subscription of broadcasters to the codes adopted by the NAB is purely voluntary. However, subscription to the codes has been high. The adoption of a particular code is done by the Television Code Review Board and ratified by NAB directors.

The primary purpose of the code is to assist subscribing stations in reviewing the legality of the commercials advertised. Questions with respect to specific commercials are raised upon inquiry or complaint of a station's advertisers, advertising agencies, or the public. In addition, a few categories of advertising, including children's toy commercials, are subject to a code pre-clearance.

Although the Code Board adopted certain guidelines, the final determination regarding code compliance is the responsibility of the individual licensee. In order to assist stations in commercial review, the Code Authority periodically issues Code Board-approved guidelines for particular categories of advertising. The Code Authority publicizes guidelines and changes in, and interpretations of, code policies in a monthly newsletter, *Code News*. The guidelines are then put in a yearly compendium of self-regulating policies and activities.

These guidelines have been of extraordinary help to broadcasters in determining the appropriateness of any particular commercial. Therefore, licensees should apprise themselves of the various guidelines offered by the NAB. In this manner, licensees will be in a position to make a more competent analysis of the appropriateness of any commercial advertising.

#### Program-length commericals

The Commission has taken the positin that certain programs which mix programming and commercial matter are per se against the public interest. The FCC views as a "serious dereliction of duty" broadcasting programs which interweave "entertainment" or "informational" content with promotions of the products or services of the program's advertisers.

In making determinations in this area, the licensee should have as a primary consideration the public interest in the program selection. The selection of program matter which appears to be designed primarily for a product of the sponsor rather than to serve the public interest by either entertaining or informing, will raise serious questions as to the licensee's purpose in selecting the program. Just because interested commercial entity sponsors a program the content of which is related to the sponsor's product, however, does not, in and of itself, make the program entirely a commercial.

Broadcasters should remember that one of the key questions to ask is "What is the basis on which the program material was selected?" If a licensee reviews the proposed

## Superior pictures at lower cost! Join the ferrite generation.

and give you 2 to 5 times longer life than you receive from ordinary video heads. Get the facts from our full-time field engineer who serves your region.

Superior pictures and significant savings are yours when you specify state-of-the-art high technology hot-pressed ferrite quad video heads from Spin Physics. Bring your quad machines into the new generation — the ferrite generation. The money you save on refurbishing may help toward new generation equipment in some other aspects of your operation. Our steadily growing customer list includes smart operators in all sizes of stations and production centers, and in NTSC, PAL and SECAM standards. You owe it to yourself to compare Spin Physics' advantages.

Circle 245 on Reader Service Card

#### **FCC Rules And Regulations**

programming in advance and has made some good faith determinations that the broadcast of the program will serve the public interest, the program will not likely be viewed as a program-length commercial.

In order to avoid any possible question by the FCC, care should be taken to completely separate the program content from the sponsor's sales message. As suggested by the NAB, the following guidelines should be followed by broadcasters:

- Do not use a person in the program content who is identifiable with the sponsor or his product or services.
- Do not use the same person or background in both the program and the commercial segments.
- Do not identify or mention the sponsor's product in the program segment.
- Do not make segments or give descriptions in a commercial segment which contain references to produces or services discussed during the program segment.

The area of program-length commercials is one that presents problems for all broadcasters. However, if licensees exercise due diligence in reviewing the content of programs and the associated advertising, broadcasters should not incur needless problems in this area.

#### Subliminal perception advertising

Subliminal advertising involves the presentation of a statement which is not consciously understood by the viewer. In other words, the viewer does not knowingly register the presentation or the idea as a commercial. The

FCC on several occasions has taken a strong stand against subliminal advertising. In addition, the FCC has referred serious questions in this area to the Federal Trade Commission. Therefore, broadcasters should exercise extreme care to avoid any impropriety. Broadcasters should remember that the FCC has stated that the use of this type of advertising is clearly not in the public interest.

#### Loud commercials

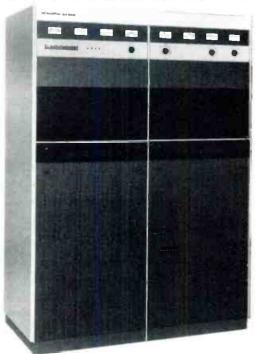

The FCC has reminded licensees that each station is under an affirmative obligation to take appropriate measures to eliminate the broadcast of an objectionably loud commercial. In the Commission's opinion, licensees should exercise good faith to avoid the presentation of commercials which are too loud. Specific guidelines for regulating the volume of commercials do not exist. Broadcasters should exercise their judgment with respect to whether or not a commercial is indeed too loud and therefore offensive. (See this month's Broadcast Industry News for the FCC's latest action in this area.)

#### Conclusion

The area of commercial advertising can present a mine field for broadcasters. Therefore, if a broadcaster has a question concerning a particular commercial or program, he/she should not hesitate to contact broadcast counsel immediately. In this manner, broadcasters can significantly reduce the possibility that commercials aired over their systems will run afoul of the rules set forth by the appropriate governing agencies.

#### MC MARTIN DELIVERS A KNOCKOUT PUNCH!

BA-5K2

See it on display — NAB Booth 317

Give your station a lively signal that attracts listeners. Take a look at the new McMartin BA-5K2 — a 5KW, single ended, three tube AM transmitter based on the design of the highly successful BA-10K ten kilowatt model.

The BA-5K2 features 125% positive modulation capability using a straight-forward plate modulated design providing high performance and reliability at reasonable cost. Other features include a 12 phase power supply, an oil filled modulation transformer, crystal controlled oscillators, LED status indicators, full metering, and cutback power of 2500 or 1000 watts.

McMartin is what you've been looking for.

#### 21. Master Clock System

Michael J. Cane, Studio Engineer, WFRV-TV, Green Bay, Wisc.

**Problem:** To create a simple, accurate master clock system utilizing existing standard digital clocks.

Solution: At our station, we have four Heathkit GC-1005 clocks that are used in day-to-day operations. The problems with these clocks is that they are never in synchronization for long due to power line noise.

National Semiconductor has had available for some time the MM 5369 programmable oscillator/divider chip,

commonly used as an internal time base for clocks not utilizing the power line as such. The IC has an internal oscillator which uses a common 3.58 MHz crystal, and through its special dividers delivers 60 Hz. Oscillator use can be negated and driven directly from a stable 3.58 source, the sync generator.

National specifies maximum oscillating frequency at 2 MHz with VDD at 6 Volts, but the IC functions when driven with a VDD of 5 V. If you decide to use a higher VDD, a burst amp may be required and level shift between the IC and following inverter stage will be necessary. In the schematic, the 5369 input is biased at one-half VDD and driven with unterminated subcarrier from a 3.58 DA. The 60 Hz output is applied to an optional 'runhold' switch to facilitate clock setting. This is then routed to a 74LS06 hex inverter that has open collector outputs capable of withstanding 30 V. These outputs are connected to each clock through single conductor shielded cable. Each clock is modified to accept drive from the synchronizer and almost any type of digital clock could be used.

In our case, the alarm function in the Heathkits is not used, so the wires on the alarm display switch were cut away and the switch used for "line-sync" control. Thus the clock can be used on its own power line time base if so desired. An 1/8-inch jack was mounted on the rear for connection to the synchronizer. The foil was cut to the clock LSI timebase input and a 10 K pullup added and wired as in Figure 2.

So far, the system has maintained absolute accuracy and synchronization and is much appreciated by our production department.

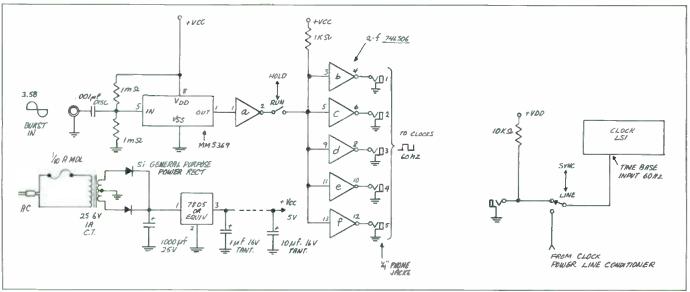

Fig. 1. Cane's master clocks

Fig. 2. Wiring of LSI timebase input and 10K pullup

#### 22. Request Line Warning Light

Michael C. Phillips, WLNC Radio, Laurinburg, N.C.

**Problem:** To warn announcers that the Request Line is ringing via a 117 V wall lamp.

Solution: We needed a simple, inexpensive, reliable, and noiseless circuit that would allow the announcer in the control room to know when the Request Line was ringing. The ac to the bulb had to be totally isolated from the telephone line, and the circuit had to be constructed so as not to excessively load the line.

The circuit in the schematic completely solves the problems and meets all of the design criteria. The solid state relay is an LED optically coupled to a photosensitive triac and provides at least 1500V isolation. The .47 mfd capacitor drops the 90V ring voltage to about 5V at the input to the SSR. (The reactance of the capacitor at 20 Hz [ring frequency] is about 17K.) No filter capacitor is needed since the ring signal is a square, which rectifies virtually into dc. The GE-MOV V130-LA2 is for protection, and is optional. Some of mine have them and some don't. They do not affect the everyday operation. The only difference in the SSRs is the terminals. Also, almost

## Blanking Widths to meet FCC SPECS.....

## with VACC's NEW ADJUSTABLE blanking color sync generator.....

Are you having difficulty meeting FCC's public notices 79-10 or 78-423?....they address the maximum legal width of horizontal and vertical blanking intervals. Excessive TV signal blanking widths are of great concern to station licensees, network, program producers and equipment manufacturers. The reason for excessive blanking widths is extensive and complicated. It is fully covered in the March 1979 SMPTE Journal. Simply put, however, after leaving the originating video source, both vertical and horizontal blanking can widen from camera recording to broadcast transmission. This widening can occur from a program during editing, duping, time base corrections and production switching.

Many engineers will innovate to meet these rigid specifications. If you are concerned about blanking widths, consider purchasing VACC's model 5000AB color sync generator. Horizontal blanking periods are adjustable from 8 to 13 microseconds. Vertical blanking can be adjusted from 11 to 22 lines. By narrowing your blanking widths before your system stretches them, you can meet FCC blanking specifications. VACC's model 5000AB is a digitally controlled color sync generator with a six month stability of ±5Hz at 3.579545MHz.

Obtain more information today from your VACC dealer or circle the bingo card. VACC 5000AB \$2145.00.

#### **Great Ideas**

Philips' request line warning light

any SSR will work. You may have to change the value of the capacitor, but that is no problem at all. You will want to add a fuse in series with the ac side of the SSR. I have a bank of lights with a common fuse, since no more than two lights are on at once.

#### 23. Automatic ID Circuit

John Rohwer, Jr., Program Director, WJVM-FM, Sterling, III.

**Problem:** To create a circuit that automatically plays an ID at the top of the hour only.

Solution: Here's our solution to a problem we're sure faces many smaller automated stations. We jingle out of spotsets (with JAM jingles, the world's finest) into music events, and we have a single cart deck devoted to this. We thought, since we got a great screamin' legal ID, wouldn't it be great if the staffers could shove it in once an hour at the end of the newscast and we could go blasting back into music? Well, as could be expected, either someone forgot to play that cart at the top of the hour, or worse yet, it played after each spotset all hour long. While we loved that jingle, we felt possibly some might tire of it quickly. The accompanying circuit has done the trick for a year now.

We have a well-broken-in (some would say ancient) IGM 500 series automation system, which lends itself well to this circuit. The circuit operation is straightforward and reasonably reliable. Our automation master clock sends out a short low-going pulse at the top of the hour.

This low-going pulse fires half of a 556 dual timer IC with the R/C constant wired for a period of, say, 70 seconds, i.e. the total length of our jingle cart. This half of the IC fires K1, through 2n2222 and the 1K current limit. This starts the jingle cart deck (off the air) and keeps it running for at least its total length, unless interrupted by the other circuitry.

From a spare set of contacts on the cart deck's "aux" relay closures, another low-going pulse is provided to the second half of the dual timer. This timer is wired for a time out period of five seconds, and after it's inverted, it provides a low pulse to the 7490 counter's reset O input, thus arming the counter. The same low-going "aux"

#### Rules for BM/E's Great Idea Contest

- 1. Eligibility: All station personnel are eligible. Consultants to the industry may enter if the entry indicates the specific station or stations using the idea or concept. Manufacturers of equipment or their representatives are not eligible.
- 2. How to Enter: Use the Official Entry Form on this page or simply send *BM/E* a description of your work. State the objective or problem and your solution. Include diagrams, drawings, or glossy photos, as appropriate. Artwork must be legible but need not be directly reproducible and not exceeding three in number. Camera reproducible material is preferred. Length can vary, but should not exceed 500 words. *BM/E* reserves the right to edit material. Entry should include: Name, title, station affiliation, and the class of station TV, FM, AM. Indicate if idea is completely original with you.
- 3. Material Accepted for Publication: *BM/E* editors will make all decisions regarding acceptability for publication. If duplicative or similar ideas are received. *BM/E* editors will judge which entry or entries to accept. A \$10 honorarium will be paid for each item published.
- **4. Voting:** Every reader of *BM/E* is entitled to rank the ideas published. This can be done on the Reader Service Card in the magazine or by letters or cards sent to the *BM/E* office. To vote, readers should select the three ideas they like best and rank them 1, 2, or 3
- **5. Winners:** Top rated entries in the year-long tally will become winners in each of the three major categories (AM, FM, TV). Final winners will be picked in February 1980 and announced in the March 1980 issue of *BM/E*.
- **6. Prizes and Awards:** Three top prizes will be awarded: a programmable electronic calculator will be awarded for the highest rated entry in the respective categories of AM, FM, and TV. Ten

#### Great Ideas

pulses also enter the 7490's count input (which is tied high through 2.2 K just to be convincing). The counter's BCD 1 and 2 output lines are nand-gated to the reset input of the first half of the timer IC as shown.

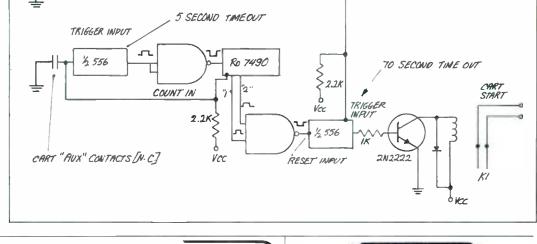

What it boils down to is this: if during any given hour you plan to break for x number of spotsets, record that number plus one more jingle on the jingle cart (just to be safe). Just before the ID, place three "aux" tones on the tape, then record the legal ID. When the cart is inserted the automation's top-of-the-hour pulse will start the cart and hold it in the run mode until the counter section detects

Rohwer's automatic ID circuit

three "aux" pulses within the five-second timing period) the timer IC is then reset, it relaxes its hold on the cart machine start circuitry, and the cart is allowed to cue to the ID. For the rest of the hour the same cart deck plays regular jingles. At the top of the next hour, the search begins again. Since the circuit reacts only to three "aux" pulses within the five-second timing period, all other "aux" pulses are ignored, and the cart cannot accidentally cue to the wrong cut (if it's properly recorded).

This circuit is ridiculously simple and highly reliable. It's done the job for us for a year, and sure beats wasting another cart deck once an hour. Adaptations and special uses are unlimited and, with the extra reed switch, foulups are nil.

## BROADCAST

For more information circle bold face numbers of reader service card.

This month's Broadcast Equipment column highlights some of the equip-ment introduced at the Eleventh International Television Symposium and Technical Exhibition in Montreux, as designated by the symbol in the upper left corner.

#### Remote Control System

300

Model MRC-1 is a microprocessor-based remote control system for broadcast transmitters that is designed for multi-site operation. It is capable of utilizing all common radio and/or telephone circuits. Features include random assignment of control functions, telemetry tolerance alarming, crossfunctioning channels to allow for indirect power calculation, automatic muting for main/alternate or directional pattern, and elimination of calibration potentiometers through programmable display tracking. The unit performs internal calibration procedures and techniques every four seconds to assure long-term stability and accuracy over a wide temperature range. A system alarm automatically alerts the operator of invalid operational integrity. Optional automatic logging is achieved by adding interface boards and a Model 43 teletype printer. Log headings are stored in long-term solid state memory. Routine operation is via color-coded front panel keyboards. Maintenance/ setup is delegated by two levels of built-in security: factory-provided 'primary'' security code, entered on the front-panel keyboard and allowing access to all primary and secondary setup modes, and a user-generated "secondary" code that allows access to the "limits on/off," "high limit," "low limit," and "site enable" keys. Based on the 6802  $\mu$  p chip, the memory board uses EPROMs to establish basic operating architecture, MOSELEY ASSOCIATES, INC.

#### 1 kW FM Transmitter

301

This convection-cooled solid state FM transmitter will handle mono and stereo broadcasts in the 87.5 to 108 MHz range, as well as road-user broadcasts and auxiliary signals with modulation frequencies from 53 to 100 kHz. It

consists of the maker's SU 155 50W broadband exciter linked by a coupling network with two VU 250 500 W amplifiers. By cascading the amplifier stages, transmitter systems for power outputs of between 500 W and 3 KW may be composed. The unit uses a single power supply and self-checking system modules. It can be supplied for active standby, passive standby, or backup on an n/1 principle, depending on user's requirements. 19-inch rackmounted with space for further plugins. ROHDE & SCHWARZ.

#### Digital Telecine

302

FDL 60 is a digital CCD telecine equipped for all positive and negative 35 mm and 16 mm films. It features line scanning with digital storage, described by the maker as a completely new technique. Film transport is continuous and capstan-driven. Picture information undergoes RGB separation in the prism system and is scanned line after line by CCD sensors before being written into a digital frame store. Forward or reverse operation at normal, slow motion, or fast forward speeds is achieved by modifying the write in and read out program. Full-scale color picture is available at all speeds. Film deck and electronics are controlled by microcomputer. CCD sensors replace pickup or scanning tubes and operate on low voltage dc. They offer long life, no burn-in, afterglow or field lag, continuous vertical scan, and vertically constant resolution. Automatics include color correction (with manual access), shading and fixed pattern noise correction, white level and black level. The frame store employds 16K RAM technology with component coding. Luminance and chrominance information is digitalized separately and stored line-by-line as a full frame. Available options include programmable start, stop and changeover, I/II changeover facility, and interfaces for color correc-

the lens). The tube has a high beam reserve, according to the manufacturer, and when used with dynamic beam control can provide four f-stops of highlight protection to minimize comettailing. Also minimizing comet-tailing and blooming is a diode electron gun for dynamic beam control. A thinner photoconductive target is used for increased resolution. The new tubes, while intended for EFP and studio use, are designed to be suitable for ENG use as well. They are mechanically interchangeable with XQ1427 tubes and have the same pin connections. PHILIPS.

#### One-Inch Videotape

304

Scotch brand 479 Master Broadcast Videotape is compatible with Ampex, Bosch Fernseh, and Sony one-inch recorders. According to the maker's laboratory tests, RF output and S/N are improved 1 dB over previous tapes and

color noise is improved 2 dB, Coercivity is 740 oersteds, described as generally higher than previous tapes. The tape has a rugged base to permit stop motion, frame-by-frame editing, jogging, and slow motion. Back treatment improves handling and eliminates polyester abrasion, a significant cause of dropouts. A patented cushionedflange reel provides extra protection for tape edges during use, handling, and shipping. Available in 30, 45, 60, and 90-minute lengths. 3M CO.

#### **Automatic Tester**

305

a microprocessor-controlled unit designed for testing electronic crossbar panels. All fuctional tests - control, modulation paths, transmission loss, leakage, phase error - are carried out on the electronic TELKOS Coupling Panel System within a few minutes. standard, and 22X lenses may also be used. Automatic white balance, autto iris, color filters, and ND filters are built into the camera. Built-in sync generator is genlocked to external sync signals if black burst or composite video signals are supplied externally. Studio housing is built of aluminum alloy casting to withstand rough handling. Sensitivity is 2000 lux at f/4; S/N is greater than 51 dB; horizontal resolution is 500 lines at center, 400 lines at corners. \$45,000 without lens. HITACHI DENSHI AMERICA. LTD.

#### Video Editing System

The Jatex small-format computerized video editing system is plug-compatible with all video formats having two audio tracks. It uses its own Secne Dex™ four-digit time code, described as a SMPTE-like code that can be set to two, four, or eight-frame resolution. The code is written from and

displayed at the console. It is encoded on a second audio track and is easily erasable or over-dubbed. The unit comes equipped with its own stopwatch timer with large LED displays that show the time up to an hour. The keyboard has 10 digits for edit point selection, access to edit point, and edit rehearsal, with expansion capability for microprocessor-programmed editing. Edit machine control panel is located on the console. Options include end-insert timing, allowing selection of in and out

insert points from two frames to eleven minutes; serial-to-parallel converter for use with the one-inch Type C format; rehearsal feature with slow search for use with machines that have variable speed search; remote control of feed machine; and others. The unit is expandable as user need indicates. Basic system, \$1895. TECHNISPHERE CORP.

#### VTR Audio Editing Mixer

310

The Audio Box editing mixer is designed to facilitate and expand audio production capabilities of VTR editing systems. It accepts two audio outputs from a playback VTR and delivers two audio lines to record VTR, providing switching and mixing functions that allow either or both lines to be fed to either or both audio inputs of the record VTR. A microphone input and an internal calibration tone can be injected into Audio 1 or Audio 2 input lines. The unit contains a monitoring package consisting of two VU meters and an audio monitor with built-in speaker. This package is also available in a standalone configuration. CEZAR IN-TERNATIONAL, LTD.

#### Frequency Counter

309

311

Model FC-841 is a seven-digit multifunction frequency counter that covers the 10 Hz to 50 MHz range, designed with a tilt-view stand all-steel case and 0.3-inch high LED readout. Supplied with four AA batteries, the unit also operates on ac. Gate time is 100 ms; sensitivity is 30 mV rums up to 30 MHz, decreasing to 60 mV rms at 60MHz. Time base stability is 3 ppm

## A high performance full Frame Store TBC/Synchronizer with Freeze Frame for less than \$18,000.

We take pride in introducing the PHASER, a Frame Store TBC/Synchronizer that outperforms all the economy priced models on the market, and sells for less too.

The PHASER is a new "computer" technology system that uses software to save you money.

The PHASER offers many significant unique advantages.

- Multiple microprocessors and adaptive digital circuitry eliminate adjustments and mode switching.
- A clean "Hot Switch" between non-synchronous heterodyne and direct color signals, with full bandwidth processing.
- Automatic phase locking between multiple input signals and station reference.
- · Horizontal and Vertical Blanking are never widened.
- · A "smart" hands-off system that runs itself.
- · The cleanest pictures anywhere.

Add to these the best features offered on competitive models, which we consider as standard, and you've got the PHASER, the undisputed leader in its class.

The PHASER is backed up by a network of conveniently located service centres, the most comprehensive warranty in the business, and a unique "No-Tweak" board exchange program when the initial one year warranty period is over.

Talk to your nearest authorized Digital dealer. He'll prove there is no other choice. Or ask us for full details: Digital Video Systems, 716 Gordon Baker Road, Willowdale, Ontario, Canada M2H 3B4. (416) 499-4826

The digital video experts.
