

MASTER SELECTION GUIDE and catalog

MOTOROLA Semiconductors

MASTER SELECTION GUIDE and catalog

Selecting the best semiconductor for a given application can pose a significant challenge. To simplify the task, this book presents the full line of Motorola products, with selection tables highlighting the preferred devices for the various applications.

Keeping up to date on new products also poses a challenge. The following two pages outline Motorola's program for meeting that challenge.

The information in this catalog is believed to be accurate and reliable. However, no responsibility is assumed by Motorola for its use; nor for any infringement of patents or of other rights of third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of Motorola with respect to such information.

THE MOTOROLA SEMICONDUCTOR UPDATING SYSTEM

In an era when semiconductor devices are multiplying like the proverbial "rabbits", the task of providing an effective and up-to-date perspective of available components is beyond the means of any single document. Hence, a comprehensive Motorola UPDATING SYSTEM concept has been developed to keep semiconductor users totally informed of all aspects of our product lines — from new product introductions, to major changes in directions and applications. Utilization of the system, however, demands some involvement on the part of the user . . . involvement in terms of subscribing to the update method most appropriate for his own requirements and in properly filing the associated periodicals. Toward that objective, here is a description of the system and its options.

The Master Selection Guide and Catalog (MSG)

This is the cornerstone of the Motorola Update System and, as such, it serves two purposes:

1. It lists, in alpha-numeric sequence, every standard product in the vast Motorola inventory, and . . .
2. It divides this total product offering into a variety of major-product categories, with sufficient technical information to permit an intelligent first-order evaluation as to the most suitable devices for a specific application.

The MSG is reprinted at least once a year but, as the months slip by between printings, it becomes more and more outdated. To bridge the gap between successive MSG issues, we have instituted a Periodical called...

Semiconductor Data Update (SDU)*

Published bimonthly, this free* Periodical describes briefly the technical qualifications of all new products introduced between successive issues.

Every third issue contains a categorized, cumulative index of all devices covered, to provide quick-scan insight into new-product introductions.

The cumulative index in SDU will be started anew after each printing of a revised MSG since all products discussed in previous SDU issues will be integrated in any new issue of the MSG. Between issues of the MSG, however, the individual copies of the periodical should be kept on file as a quick and handy new-product reference. It works like this:

Need a power transistor for a new application? First check the MSG for basic specs on standard Motorola devices. Then, check the latest SDU index and any subsequent SDU issues for new introductions. This procedure should lead you quickly to the most suitable devices.

For detailed product evaluation, comparison, or analysis, only a data sheet will provide sufficient technical depth. For convenience to the user, Motorola supplies data sheets of its products in a collection of individual Data Books comprising the...

Semiconductor Data Library

The Data Library is considered to be a reference library for design engineers. At least one complete set should be within easy access of any engineering group. It is particularly useful for comparative design analysis of one or more products.

Once a particular design has begun, the designer may find separate data sheets for the selected products to be more convenient. Hence, Motorola field sales offices and distributors are supplied with such data sheets for localized distribution.

Since Data Books represent a relatively large investment, they are updated less frequently than the MSG. For details on individual products that have not yet found their way into the Data Library, the user is again referred to the individual data sheets which can be obtained from regional Motorola Sales offices — or: He can subscribe to the free...

Microfiche Literature Program**

For designers with access to a Microfiche *viewer*, the new Motorola Microfiche program represents the most convenient desk-top, new-product information system. Immediately after publication of an SDU issue, the data sheets (and other selected items of new literature) of products discussed in the issue will be made available on Microfiche.

This provides for the user a complete file of new Motorola data literature that is easily stored and conveniently retrieved. If a Microfiche *copier* is available, it can quickly provide hard copy from the Microfiche file.

Literature containing a great deal of textual material, such as application notes, handbooks, data books, etc., will not be made available on Microfiche at this time. These are available from regional Motorola sales offices and distributors.

For those requiring a timely and *automatic hard-copy update* of all new literature, Motorola has initiated a...

Hard-Copy Subscription Service. Annual Fee, \$12.00***

For subscription of \$12/year, the user will receive a complete package of all data and literature described in each copy of SDU. This includes copies of application notes, data books and handbooks, as well as data sheets, and related brochures.

In short . . .

1. Through MSG and SDU you are acquainted with the major specifications of all our products.
2. Through our Data Library, plus subscription to our Microfiche (free) or hard-copy (\$12/year), you can acquire a complete data-sheet file of all our products (plus additional literature).
3. If you're interested only in specific data sheets, application notes and related literature, a call to your regional Motorola sales office or distributor should get the required material to you free of charge within 24 to 48 hours.

It's all a part of a system to keep you fully informed of our products and their capabilities. But if the system still leaves some questions unresolved, a call to any of our regional sales offices or distributors will evoke quick response with competent answers.

May we help you?

*If you are not now on the SDU subscription list please ask your Motorola sales representative to place your name on the Motorola mailing list.

**If you receive SDU and would like to receive Motorola data in Microfiche form, please send your request to Motorola Semiconductor Products Inc., P.O. Box 20924, Phoenix, Arizona 85036.

***For a subscription to the automatic hard-copy update service, send your check or money order to Motorola Semiconductor Products Inc., P.O. Box 20924, Phoenix, Arizona 85036.

IC HIGHLIGHTS

The galloping integrated circuit technology produces important new design tools so rapidly that the presentation of a total overview of available products is an illusive objective. Moreover, Motorola's pervasiveness in the various categories of integrated circuits is so widespread that the mere cataloging of new products in such an overview tends to obscure their relative significance. Hence, the following highlights of the more important developments in each of the major IC product segments . . .

MICROCOMPUTER FAMILIES — Of major significance is Motorola's expansion into three different families for a variety of applications:

1. The M6800 MOS Family for control and communication applications;
2. The bipolar M2900 Family for general-purpose computer and minicomputer development;
3. The bipolar *superspeed* M10800 Family for critical, real-time computer systems.

While all families are slated for continual product expansion, one important new member of the M6800 line has been the MC6875 Monolithic Clock Generator (pages 8, 74) that provides a low-cost, highly efficient and simple replacement for the hybrid methods that had to be adopted for this function up to now. Other newly introduced additions to this family are a series of interface circuits that greatly simplify the expansion of the associated peripheral systems (page 10).

Supplementing the processor component families is a brand-new Motorola product offering — *Micromodules* (page 32). These new products offer MPU subsystems and systems of varying capabilities for those customers that want to speed-up their equipment development cycle.

MEMORIES — The past 12 months have seen Motorola memory production expand to virtually unlimited availability of the MCM6604 4K RAMs, as well as introduction of the MCM4027 4K RAM and the MCM6616 16K RAM, and

(continued on next page)

MOTOROLA Semiconductors

a selection of other MOS devices, page 36. Bipolar memory additions with major impact include the MCM10146 1K RAM, page 39.

In addition, Motorola now supplies *Memory Systems*, page 40, for those whose requirements go beyond the individual "chip" stage.

LOGIC FAMILIES — Most significant, for 1977, is Motorola's entry into low-power Schottky TTL competition, with up to a hundred devices slated for introduction during the year, page 53. New CMOS devices in both MSI and LSI categories, page 43, have been added to this explosive product line, with a major emphasis on B-series devices.

INTERFACE CIRCUITS — As IC technology spreads heavily into LSI, the need for the development of interface circuits with discrete components and SSI devices is a contradiction in scale. Motorola's large-scale effort on design of specialized single-chip interface circuits for computer and communications equipment has produced devices that satisfy a majority of requirements, page 71.

LINEAR CIRCUITS — No area of integrated circuits is as widely diversified as that of Linear Circuits. Motorola's Linear leadership has established itself in virtually every category. Some of the more interesting products newly added to this product line are:

One of the first Quad FET Operational Amplifiers, type MC3571/3471, which offers a low cost and wide bandwidth;

The MC3520/3420 Switching Regulator Control Unit which provides all the control circuitry for PWM push-pull, bridge and series type power supplies;

The MC3523/3423 Overvoltage Sensing Circuit, which quickly "crowbars" or short circuits the supply when an overvoltage condition is sensed;

For the automotive market, the MC3333 Vari-Dwell Ignition Circuit which offers externally adjustable overvoltage shutdown, dwell time, and spark energy.

PHASE-LOCKED LOOP — Expanding the choice of circuits designed for phase-locked loop applications are a number of CMOS Frequency Synthesizers for CB and FM transceivers (see page 106).

MICROCOMPUTER FAMILIES

M6800 — ALL YOU NEED FOR YOUR MICROCOMPUTER SYSTEM

The M6800 Family is a pervasive set of computer circuits designed to handle most data processing, control and communication functions with a high degree of efficiency. Its NMOS LSI architecture optimizes process cost reduction without stifling system design flexibility. Its powerful instruction set minimizes memory requirements and enhances system speed. And as backup for these components, Motorola offers an extensive system of support products, design aids and services that can significantly reduce your system development costs.

A FAMILY OF COMPUTER SLICES

For high performance computer systems, the "Slice" approach provides an excellent method for system design. With its "building block" expansion concept, it is possible to meet the end-use requirement of any computing system, from the simple to the most complex,

while taking advantage of the cost and ease-of-design features of standard LSI components. The Motorola "Slice" family consists of two device lines. Both families have 4-bit architecture that is easily expandable to meet any system size and performance goal.

MICROMODULES

A new capability at Motorola now offers the equipment designer an expanding line of microcomputer-oriented modules that permits entry into the equipment hardware design cycle at a level considerably higher than the LSI components level. Page 32

M6800

The Motorola M6800 Concept

The Motorola M6800 MPU concept is more than just a compatible family of components for the implementation of a microcomputer. It encompasses a comprehensive capability for the design, manufacturing and upgrading of processor-based equipment and product lines. It consists of the following:

- An interactive family of NMOS LSI building blocks that combines cost-effective architecture with a high degree of design flexibility and operating efficiency.
- A pervasive complement of support equipment for system design, evaluation and analysis.

The Components page 8

The original M6800 microprocessor family consists of five LSI NMOS components that

comprise a basic but powerful microcomputer. These basic components since have been supplemented with additional devices utilizing both NMOS and bipolar technologies. The additional parts, including a single-chip MODEM, a series of clock generators and an assortment of controllers, adapters and expanders, all interact to give the M6800 system ever-increasing versatility in expanding applications.

Special features of an M6800 MPU system include: □

8-bit parallel orientation; □ High-speed operation, with clock rates up to 1.5 MHz; □ 72 powerful, variable-length instructions; □ 65,000-byte memory capacity; □ Single, 5-V power-supply requirement. □ An extensive repertoire of functional and diagnostic software. □ A growing line of peripheral equipment to augment system design and operation.

This comprehensive product line is supported by an elaborate program of applications information, training and assistance that helps ensure the success of a user's project.

Support Software

Support Peripherals

Support Products

Support Products page 13

Significant aspects of micro-processor design involve the development of programs that adapt the system to its eventual unique function. Motorola M6800 Support Products include powerful design, evaluation and diagnostic equipment that simplifies the system-design cycle. And to further increase M6800 functional utility, the rapidly expanding Support Product line encompasses go/no-go test equipment for rapid incoming inspection of complex LSI components, and dedicated instrumentation for field-testing of in-use systems.

Support Software page 18

The development of the fixed programming routines that convert a microprocessor system into a dedicated control element can be accomplished by means of software that emulates or simulates the actual system. M6800 Software Support consists of tape, disk and card libraries that permit user-program development not only with a supportive EXORciser, but with large time-shared computer systems and other popular computers and minicomputers as well. These alternatives provide maximum versatility for program development.

Support Peripherals page 20

Data loading peripherals aren't necessarily an integral part of an MPU line. But when designed specifically for use in conjunction with a particular MPU system it is often possible to effect cost savings by avoiding circuit redundancy. Motorola already supplies some dedicated peripherals for the M6800 system and has more under consideration.

Applications Support page 22

The success of an MPU-based design project is directly related to the designer's familiarity with the technical details of the product line. The Motorola literature, training and technical assistance program is aimed at providing maximum assistance for M6800 users.

The Components

The MPU

The microprocessing unit (MPU) performs the central control function of a microcomputer and its architecture determines the eventual applications for which the system is best suited. The MC6800 MPU is especially oriented toward the process control and data communications fields and offers maximum power and versatility for such applications.

Two objectives guided the designers of the M6800 family — maximum system throughput (operating speed), and system design ease. How well these objectives are achieved can be evaluated from the following inherent design features:

Design Ease — □ Bus organized system — reduces component count and simplifies interconnections. □ Single 5-V supply — reduces system complexity and cost.

□ 16-bit address system — permits selective addressing in excess of 65,000 memory locations. □ 72 variable-length instruction set — actually performs 197 operational sequences.

Optimized Throughput — □ N-channel MOS processing — permits clock rates as high as 1.5 MHz and simplifies LSI implementation. □ Automatic data stacking during interrupts — saves contents of MPU registers. □ 3-state output — makes memory addressing and multiprocessing applications realizable. □ Vectored restart — automatically clears system during restart and saves programming steps.

The Clock

Limited Function
250 kHz to 2.5 MHz

Full Function
850 kHz to 2.5 MHz

Alternate Function
250 kHz to 2.5 MHz

The M6800 system operates on two non-overlapping clock phases, ϕ_1 and ϕ_2 . Three versions of a suitable clock generator are currently available in hybrid module form. These modules contain the crystal, the oscillator circuit, the NMOS and TTL drivers, and the waveshaping and interface circuitry to operate in conjunction with the 5-V M6800 system. They are normally supplied with a 1 MHz crystal, but other frequencies between 250 kHz and 2.5 MHz can be ordered.

Monolithic Clock Generator

Low-cost generator designed to enhance the M6800 system capability. Capable of operating at four times the highest MPU clock rate. Frequency is determined by external crystal or RC network.

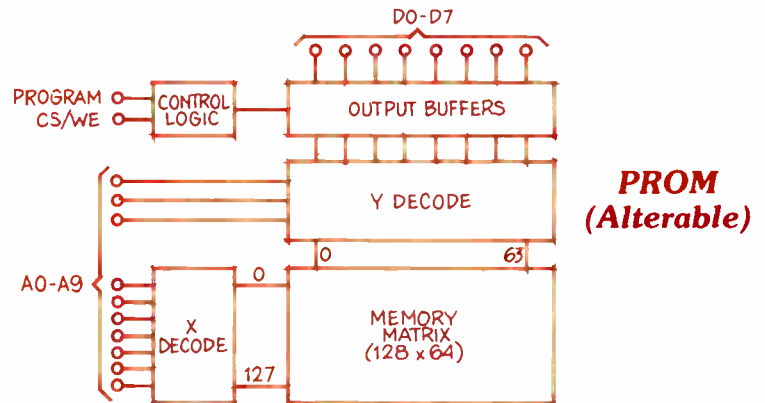

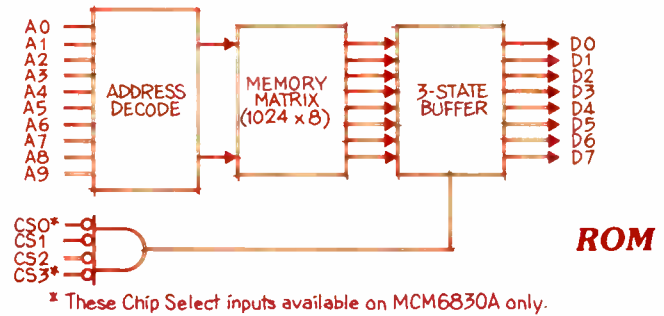

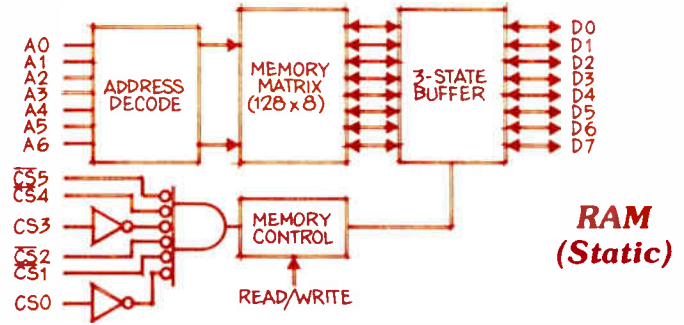

Memories

M6800 implementation is enhanced by availability of bus oriented memories with 8-bit organization and 5-V operation to match the basic system philosophy. These N-channel, MOS memories, both RAMs and ROMs, operate directly from the bus system and require no additional components in most MPU applications.

Random Access Memory (Static)

| | ACCESS TIME |
|--------------------|-------------|
| 128 x 8-BIT | |
| MCM6810A1 | 350 ns |
| MCM6810A | 450 ns |

Read-Only Memory

All are mask-programmable, with the active level of the Chip Select inputs and the memory content defined by the user. All have Access Time of 500 ns (max).

1024 x 8-BIT — MCM6830A
MCM68308

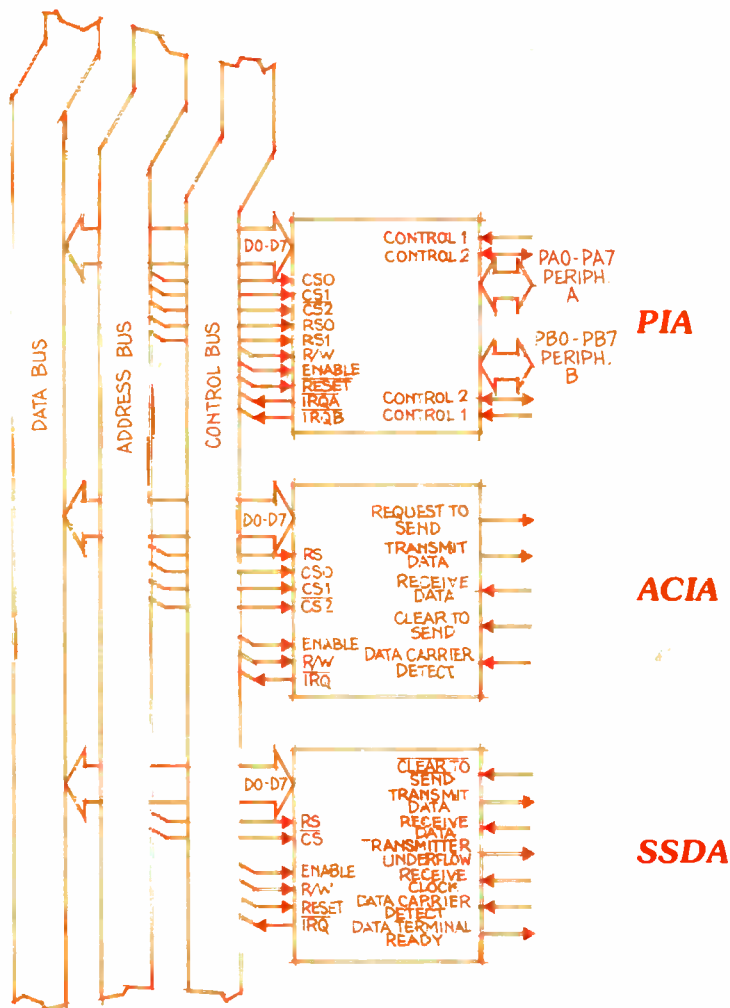

These two memories differ primarily in pinouts and number of Chip Select inputs available.

2048 x 8-BIT — MCM6832

Programmable Read-Only Memory (Alterable)

1024 X 8-BIT — MCM68708

Electrically programmable in the field. May be erased with ultraviolet light and reprogrammed electrically. Contact your Motorola representative for availability information.

Interface Circuits

Peripheral Interface Adapter (PIA) MC6820

Parallel oriented peripheral(s) can be connected to the MC6800 MPU via the Peripheral Interface Adapter — usually without any additional circuit requirements. The PIA contains two I/O circuit blocks, each capable of controlling an independent 8-bit peripheral I/O bus.

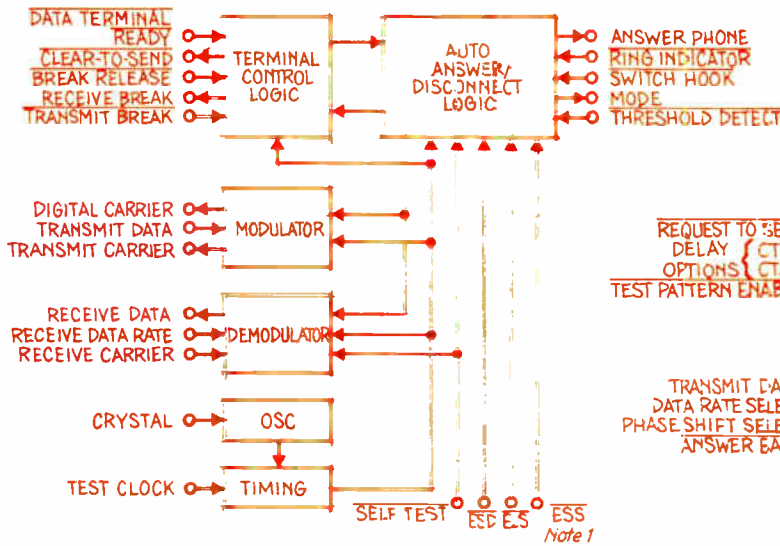

Multiple PIAs can be used with a single system and selectively addressed by means of Chip Select Inputs.

Asynchronous Communications Interface Adapter (ACIA) MC6850

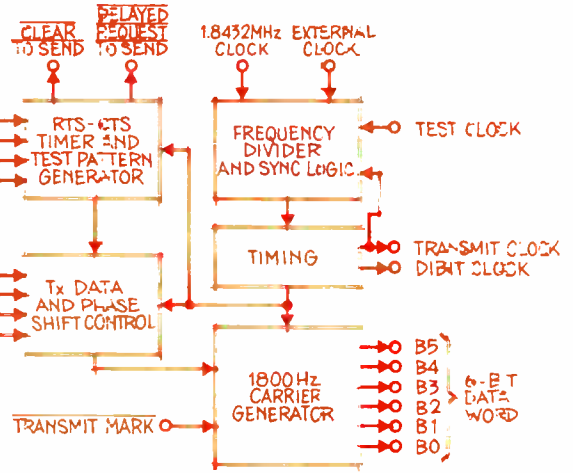

Data transmission is accomplished in the serial mode; the M6800 bus system operates only in the parallel mode. By performing serial-to-parallel and parallel-to-serial conversions, the MC6850 ACIA provides the means for communication between the MPU and peripheral equipment such as modems, TTYs, CRT terminals, keyboard/printers and other equipment requiring an asynchronous serial data format. Communications can be accomplished at transmission rates up to 500 kbps.

Synchronous Serial Data Adapter (SSDA) MC6852

Provides interface between the M6800 MPU system and synchronous data terminals such as floppy disk equipment, cassette or cartridge tape controllers, numerical control systems and other systems requiring movement of data blocks. Operates at speeds up to 600 kbps. Features: Programmable Interrupts. Character Sync on 1 or 2 Sync Codes. Peripheral Modem Control Functions. 7-, 8-, or 9-Bit Transmission. Optional Even and Odd Parity.

Note 1
 ESD = Enable Space Disconnect
 ELS = Enable Long Space Disconnect
 ESS = Enable Short Space Disconnect

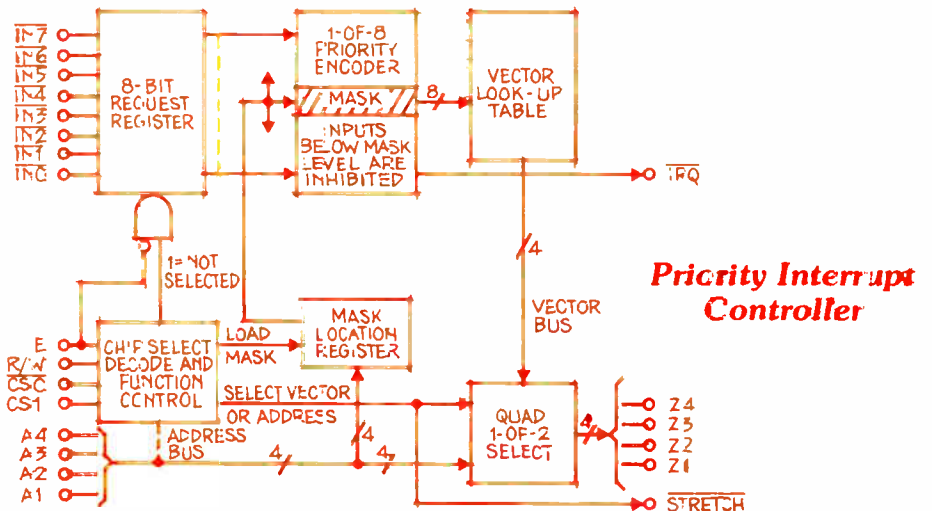

Digital Modulator

Digital Modem

Auxiliary Circuits

MC6860 0-600 bps Digital Modem

Operating from the same 5-V supply as other M6800 components, this low-speed modem is designed for implementation in a wide range of data handling systems — including stand-alone modems, data-storage devices, remote data-communications terminals and I/O interfaces for minicomputers. Interfaces with the MPU system through MC6850 ACiA over voice-grade channel. Features: Originate and Answer Capability. Automatic Answer and Disconnect. Full-Duplex or Half-Duplex Operation. Mod-Demod Self-Test.

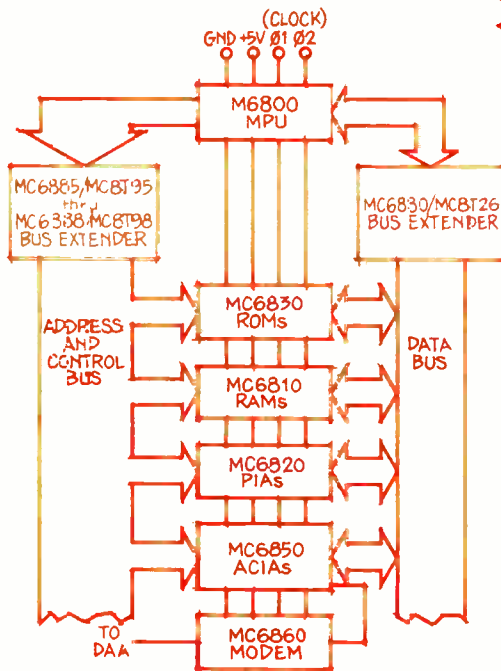

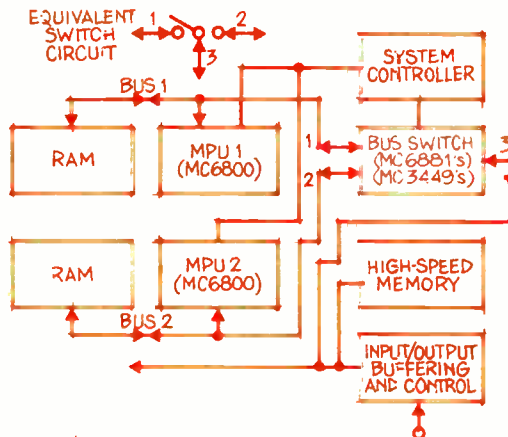

MC8507/MC6828 Priority Interrupt Controller

This bipolar LSI circuit adds high-speed “priority interrupt” capability to the M6800 system as well as to other processor systems encompassing up to eight peripherals. It eliminates the necessity for the MPU to poll all its peripherals to determine their service requirements and priority ratings. The circuit is of particular importance in systems utilizing many peripherals with interrupt requirements.

MC6862 2400 bps Digital Modulator

Provides the necessary modulation and control functions to implement a serial data communications link over voice-grade channels at bit rates of 1200 and 2400 bps. Features: Clear-to-Send Options. CCITT and U.S. Phase Options. Answer Back Tone.

Microprocessor Bus Switch Application

Microprocessor Bus Extender Application

Expansion Components

The MC6800 Microprocessing Unit is capable of directly interfacing with eight of its peripheral components (memories, interface, etc.) and one TTL load on the same bus, at a 1-MHz clock rate. For systems requiring greater load capacity, and to increase the versatility of the system in general, a number of ancillary bipolar monolithic components have been designed. All of the parts described here will be in mass production by the end of 1976.

Quad Bus Transceiver MC6880/MC8T26

This component consists of four separate receiver-trans-

mitter combinations, designed for use with a bidirectional bus system such as the M6800 data bus. Driver and receiver output currents are -40 mA and -16 mA, respectively. Maximum input current requirement of 200 μ A at any input pin ensures proper operation with MC6800 MPU. Employs Schottky technology for high-speed operation.

Hex Buffer/Inverters MC6885/MC8T95 through MC6888/MC8T98

Designed as bus extender for unidirectional bus systems such as the M6800 Address and

Control bus functions. The various devices in this product sequence differ in output (inverting and noninverting) and enable configurations. Schottky technology assures high-speed operation (8 ns typ). High impedance inputs prevent loading of bus system for output requirements up to 40 mA.

Triple Bidirectional Bus Extender/Switch MC6881/MC3449

Permits bidirectional exchange of TTL level signals in multiprocessor installations, or multiplexing of signals to a single processor.

M6800 Support Products

There are important differences in system-design with hardwired circuitry and designing with microprocessors. With hardwired, dedicated circuitry, once the necessary components have been functionally interconnected, the job is done; with microprocessors, when the hardware of the system has been emulated, that's when the real design starts — the job of

designing the program that turns a basic uneducated computer into a functional system dedicated to a specific task.

The key to developing a dedicated MPU system and, ultimately, to manufacture and service the system, requires an umbrella of support equipment ranging from development aids to manufacturing and service

instruments. The M6800 product family is already complemented with an array of such user-oriented developments and test equipment, and additional items will be implemented as quickly as a need for them is demonstrated. It's part of a systematic plan to keep The Family foremost on the "preferred product" list of the system designer.

The M68SDT EXORciser

M6800B Evaluation Module II

This Module is, in effect, a microcomputer that provides an efficient and relatively economical off-the-shelf means to evaluate the operating characteristics of the M6800 component family in various applications. It interfaces with either a TTY (20 μ A neutral current loop) or an RS-232C-compatible terminal and, through its inherent MINIBUG control program, provides the following functions: Load data. Analyze and, if required, change data in the module's RAM and MPU registers. Print out or record on tape the data stored in the memory. Set the number of stop bits for data communications. Run the user's program. Requires a separate power supply with 5 V/2 A and ± 12 V/50 mA capability.

To develop a computer, it takes a computer — one with even greater capacity than the system under development. The EXORciser is such a computer, developed expressly as a design, evaluation and diagnostic instrument for M6800-based microcomputer systems.

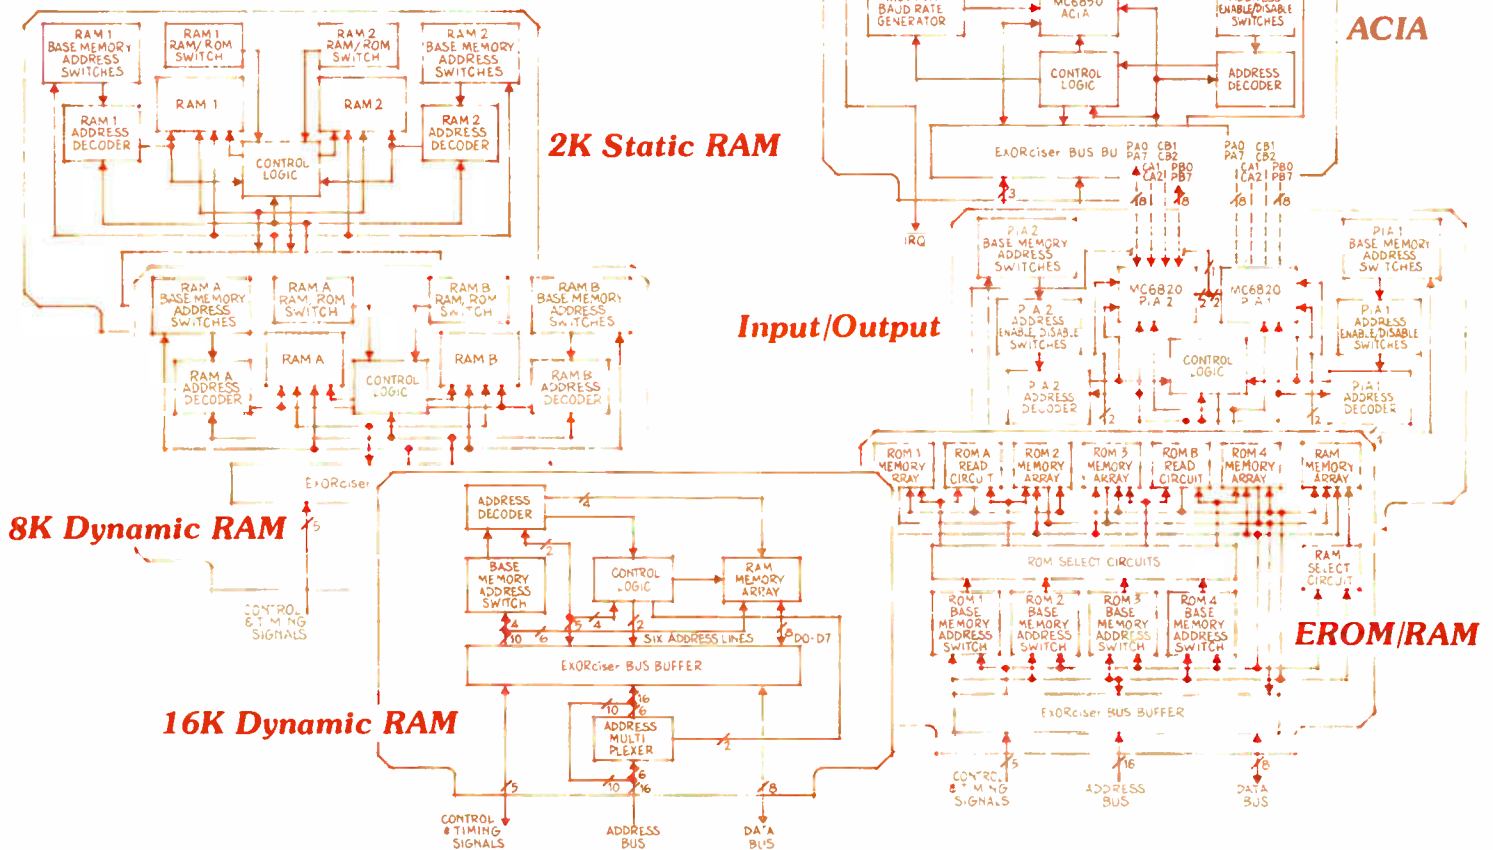

Essentially, the EXORciser is an expandable "breadboarding" system that allows almost instantaneous emulation of any M6800 microcomputer configuration, from the simplest to the most elaborate. Built-in programming and diagnostic routines then facilitate the development and debugging of the dedicated programs for the system under design.

The basic EXORciser contains a power supply and three functional modules — an MPU

Module, a Debug Module and a Baud-Rate Module. Together, these form a development microcomputer, requiring only additional memory capacity and appropriate interface circuitry for the peripherals. These additional requirements are available as add-on modules, permitting the designer to purchase a few or as many as required for the anticipated end-functions of the system(s) to be developed.

The chassis is capable of accommodating up to 12 additional plug-in modules to give the EXORciser increased versatility, with memory capacity of up to 65,536 bytes.

... and its Options

Memory Modules

All are bus compatible with the EXORciser and simply plug into the main chassis. These Modules extend the flexibility of the EXORciser as a microcomputer.

A. 2K Static RAM Module — (MEX6812-1) 2048 x 8-bit NMOS memory in two 1024-byte arrays. Each array is switch-selectable and can be used as ROM.

B. 8K Dynamic RAM Module — (MEX6815-3) 8192 x 8-bit NMOS memory in two 4096-byte arrays. Each array is switch-selectable and can be used as ROM. Cycle stealing refresh. Refresh capability during power failure.

C. 16K Dynamic RAM Module — (MEX6816-1) 16,384 x 8-bits NMOS array. Switch-selectable base address. Cycle stealing refresh.

D. EROM/RAM Module — (MEX68RR) Prewired memory card has provisions for mounting up to 16 MCM68708 EROM devices (or equivalent) for 16K x 8-bits of available PROM... plus four sockets for MCM6810 RAM devices (Memory devices not supplied).

Interface Modules

E. Input/Output Module — (MEX6820) Four 8-bit input/output ports for parallel oriented peripheral interfacing. Eight controlled interrupt lines. Each I/O port individually select-

able as a memory address. Three-state TTL compatible I/O lines.

F. ACIA Module — (MEX6850) Interfaces with TTY or RS-232C data terminal. 8 or 9-bit transmission. Program-selectable odd, even or no parity. 8 switch-selectable baud rates (110–9600 baud).

Auxiliary Modules

Universal Wirewrap Module — (MEX68WW)

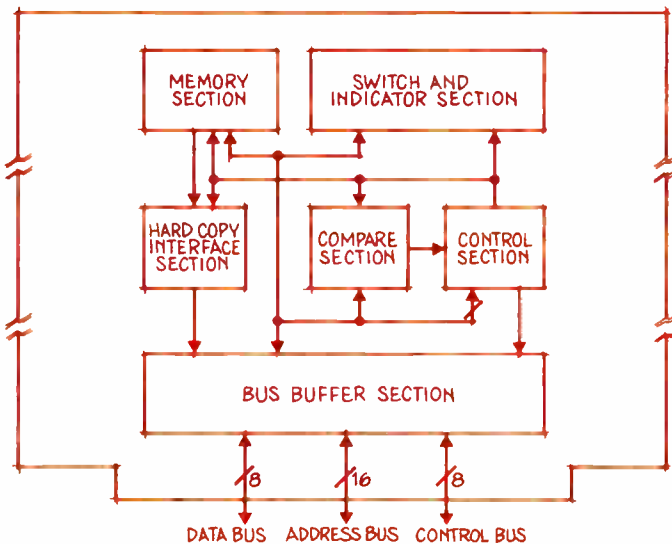

Space for mounting up to 75 14-pin wirewrap sockets for user designed accessory circuits.

Extender Module — (MEX68XT)

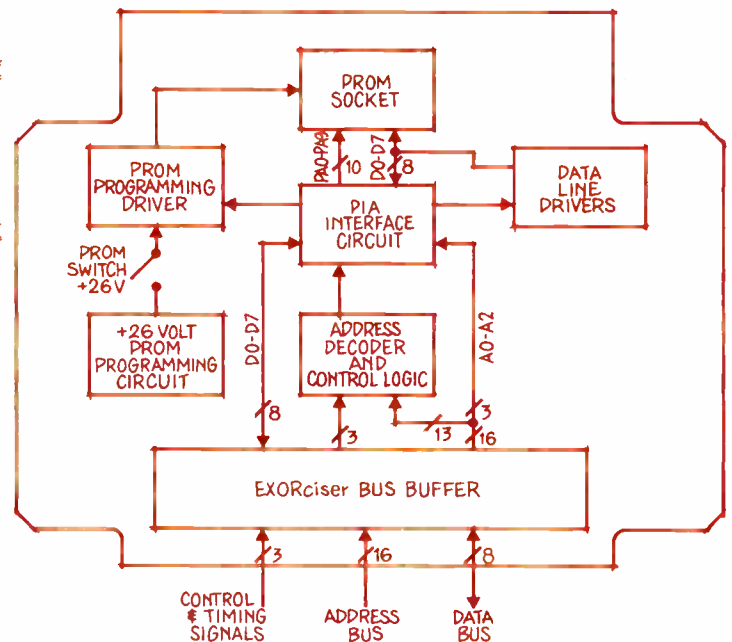

Permits access to any EXORciser module from outside the EXORciser chassis.

... and more sophisticated aids for

System Analyzer

PROM Programmer

The basic EXORciser is the focal point not only for system design support, but also for the support of subsequent micro-processor manufacturing and testing procedures, as described here.

System Analyzer (MEX68SA)

This unique instrument can be used as an independent, portable troubleshooting unit for field service of M6800-based equipment, or in conjunction with the EXORciser to enhance the capabilities of the latter as a design tool.

In field service applications, the System Analyzer derives operating power and I/O signals directly from the system under test. It stops the system at any point in its program, steps

through the program, changes the contents of the system memory, monitors and records the MPU's operation during a selected portion of the program. It can even perform these functions without shutting down the operation of the system.

In EXORciser applications, it adds a variety of options to the system's inherent program development capabilities.

In conjunction with the EXORciser and USE, it offers the most powerful combination of development and diagnostic tools available for microcomputer work.

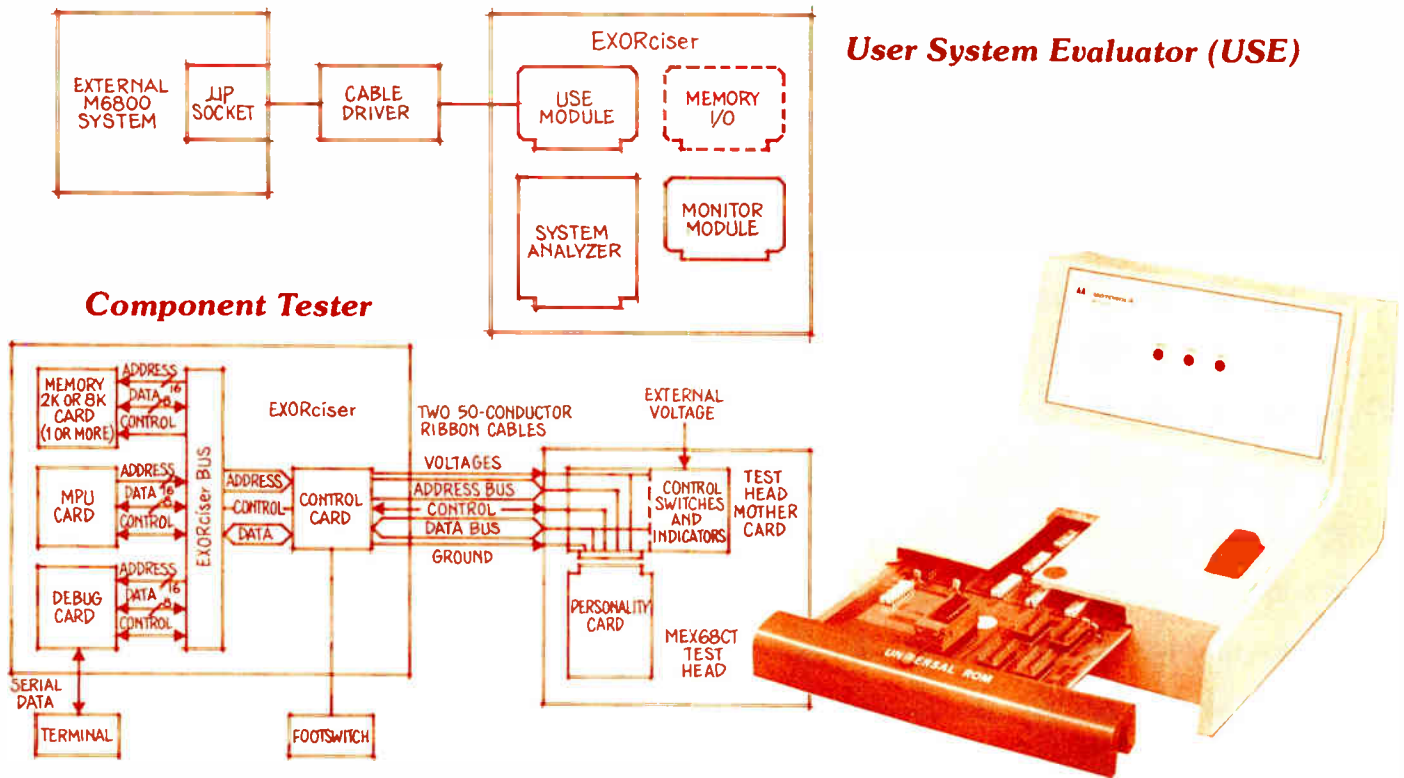

PROM Programmer (MEX68PP1)

Once a program for a micro-processor system is designed and

debugged, it is entered into a Read-Only Memory which becomes part of the dedicated MPU operated end system. When an end system is manufactured in large quantities, these programmed ROMs are often purchased in quantity from the component supplier. When only a few end systems are to be produced, the equipment manufacturer may elect to use an Electrically Alterable PROM (EPROM) and do the programming himself. The PROM Programmer, in conjunction with the EXORciser, will perform this function quickly, easily and inexpensively.

The PROM Programmer operates in conjunction with the EXORciser's EXbug firmware to program the EPROMs of the 2704 and 2708 type. It can verify

System Design, Manufacturing and Service

the data in the EPROM, transfer data from the EPROM to the EXORciser RAM memory, and transfer blocks of data from one memory location to another. Programming time varies from 0.57 minutes for the 2704, to 1.54 minutes for the 2708.

User System Evaluator (USE) (MEX68USE)

This module extends all the capabilities of the EXORciser to an existing user system. Whereas the basic EXORciser permits design of a processor system through emulation, the USE Module brings the diagnostic and evaluation capabilities of the EXORciser to bear on an existing system. In conjunction with the System Analyzer (and EXORciser), it provides a com-

prehensive system diagnostic center for all 6800-based equipment.

Component Tester (MEX68CT)

The most practical way to test an LSI computer component is in an actual computer system in which the component under test is used to perform its actual intended function. For the M6800 system, this can be done quickly and easily with the Component Tester.

The Component Tester consists of a Test Head, an EXORciser Control Card, a series of Personality Cards (one for each component in the M6800 Family), and the associated Test Programs. In use, the Test Head is interconnected with

the EXORciser, via the Control Card (and interface cables), and the appropriate Personality Card is inserted in the Test Head. Then, with the device under test plugged into the Personality Card, the appropriate Test Programs steps the component through its various functions, using the inherent firmware of the EXORciser. The entire test takes from .5 to 1.5 seconds, depending on the device under test, and indicator lamps on the Test Head give a Pass/Fail indication of the component status.

The Component Tester is an ideal instrument to be used for incoming inspection, or on the production line. A single EXORciser can handle as many as eight test heads simultaneously.

M6800 Support Software

Human programmers speak one language; machines understand another. Hence, a number of programs (software) have been developed to automatically translate, via a computer, from the programmer's language (source language) to machine language. Such a translation program is called an *Assembler* or a *Compiler*.

The development of programs that convert an uneducated microcomputer into a dedicated machine can be accomplished directly on the machine to be programmed (as with an EXORciser), or on other types of computers. The Assembler for use with the EXORciser is called a Resident Assembler. Assemblers that translate the M6800 mnemonics instructions into unique languages of other computers are called Cross Assemblers. A number of Cross Assemblers for major computer systems have been developed.

Going hand-in-hand with the Assembler, for program development, is the Editor. This software routine permits the programmer to use a computer

to make whatever changes are required to create, correct, or revise a program. Each computer has an edit program that is unique to that system.

Motorola provides a compatible family of software that permits M6800 microcomputer program development in one of three ways:

1. **Resident Software** — designed for the EXORciser and Evaluation Module to provide the lowest program-development cost where a number of M6800 microcomputer designs are contemplated over a period of time.

A Resident Assembler and Editor is available for use with the Motorola EXORciser and Evaluation Module as follows:

M6800 Resident Software Options

| DESCRIPTION | MEDIA | PART NUMBER | |
|------------------|------------|---------------|---------------------|
| | | For EXORciser | For Eval. Module II |
| Assembler/Editor | Cassette | M68XAE6812A | |
| | Paper Tape | M68XAE6812B | |
| | Diskette | M68XAE6812D | |
| Assembler Only | Cassette | M68ASMR012A | M68ASMR212A |
| | Paper Tape | M68ASMR012B | M68ASMR212B |
| | Diskette | M68ASMR012D | |
| Editor Only | Cassette | M68EDTR012A | M68EDTR212A |
| | Paper Tape | M68EDTR012B | M68EDTR212B |
| | Diskette | M68EDTR012D | |

To simplify the use of other computers in the development of programs for M6800 machines, additional software routines have been developed, as follows: **Simulator** — duplicates on a host machine the exact execution of machine language instructions for the

M6800 microprocessor — including a count of the elapsed cycles of simulated execution.

Build Virtual Machine — enables the programmer to manipulate machine files, and the object code which may be contained in machine files, in-

dependently of the Assembler — assists the programmer on a host machine in the use of M6800 software and hardware. Provides up-to-date information on new developments in the M6800 Microcomputer family of components and software support.

M6800 Support Peripherals

The EXORdisk is a “floppy disk” storage system that extends the capacity of the EXORciser by up to one-million bytes of memory. Together with the EXORciser, and an associated, separately available Interface Module, it provides a complete development system whose high-speed software-development capabilities can be matched only by much more expensive minicomputers. Special Features: Two and Four Disk-Drive Units with up to 256,256 8-Bit Bytes per Diskette. Software Operating System, Includes EDOS (EXORciser Floppy Disk Operating System). Build-In Controller Compatible with IBM 3740 Format and Media.

The EXORTape is a high-speed paper-tape reader capable of loading a program into a memory at a rate up to 250 characters per second. Designed to operate with the compatible flat ribbon cables and plugs. Special Features: Loads up to

250 Characters per Second Photo Electric Character Detector for more Reliable Loading Plug Compatible with EXORciser Ribbon Cables included for Easy Hookup Daisy Chaining of Cables Allows Use of the EXORdisk

The Minimum System

... to Add Development Speed

A Design Support System that grows with your needs

Let's say you're going to use the M6800 MPU System for some of your future equipment design — how much design and support equipment will you need, and when will you need it? The flexibility of Motorola's Support equipment lets you satisfy your requirements at the lowest cost.

At the outset, you may want a Minimum System that provides a basic, get-acquainted development capability. Then, as designs become more involved, you may want to augment the basic equipment with higher speed development tools and their accompanying software and, certainly, you will want to expand the system's memory capacity.

As you near the end of the design cycle, you will need a production capability in the form of an EROM/RAM Card and a PROM Programmer and you may want the additional Debug options that are available with the System Analyzer and the Use Modules.

Finally, to test the various components on a production, the MOTEST-1 Component Tester is a valuable system addition.

These various groupings are itemized here.

The Minimum System

The basic EXORciser — M68SDTT1 8Kx8-Bit Dynamic RAM — MEX6815-3 Peripheral I/O Card — MEX6820, with cables (2 required) — MEX68IC Coresident Assembler-Editor — M68XAE6812() PLUS Terminal and auxiliary peripherals

... to Add Development Speed

Dual Flexible-Disk System — M68FD3712-1, with Interface Module — M68IFC Disk Software — M68D0SR022D

for Firmware Creation, and to improve Debug Capability

for On-Line Component Testing

Macroassembler — M68ASMR0121A, 16Kx8-Bit RAM (dynamic) — MEX6816-1, 2Kx8-Bit RAM (static) — MEX6812-1, (buffer for fuller Editor/Assembler operation) Option — High-Speed Tape Reader

for Firmware Creation, and

EROM/RAM Card — MEX68RR PROM Programmer — MEX68PP1

... to improve Debug Capability

System Analyzer Module — MEX68SA User System Evaluator — MEX68USE

for On-Line Component Testing

MOTEST-1 Component Tester — MEX68CT

... and for Data Communications Designs

ACIA I/O Card — MEX6850

M6800 Applications Support

The design of an operational MPU-based system is not particularly difficult. The LSI nature of the required components reduces the hardware complement to just a small number of the basic, easily compatible building blocks.

However, the development of the software that *efficiently* converts the basic computer into a dedicated machine is another matter. It demands a thorough knowledge of the interactive nature of the building block, as well as an in-depth understand-

ing of the processor's unique instruction set and its capabilities.

Motorola's M6800 customer applications support ranges from an extensive literature library to personalized training and consultation.

M10800

A MECL High-Performance 4-Bit Slice Processor Family

THE FEATURES

- High-Speed Performance --
Less than 100 ns per Microinstruction
- Bidirection Bus Orientation
- LSI Components
- MECL 10,000 Compatibility
- BCD/Binary ALU
- Microprogrammable

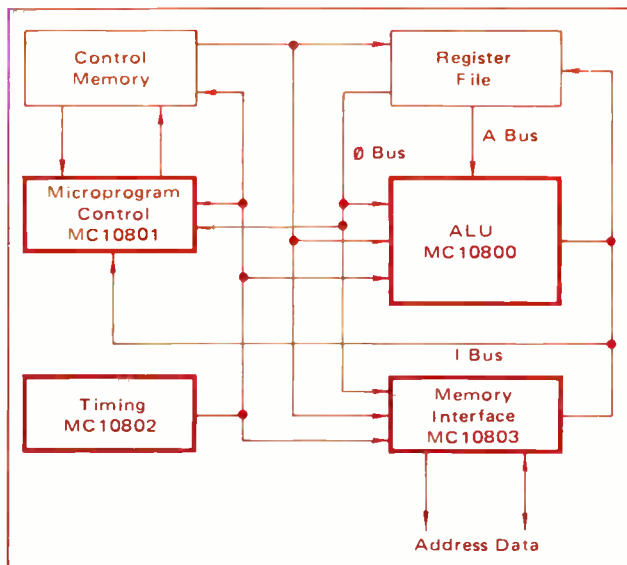

THE LSI FAMILY

| Part No. | Description | Availability |
|----------|-----------------------|--------------|
| MC10800 | 4-Bit ALU Slice | Now |
| MC10801 | Microprogram Control | Now |
| MC10802 | Timing Function | 1977 |
| MC10803 | Memory Interface | Now |
| MC10804 | ALU Extender | 1977 |
| MC10805 | Bus Translator | 1977 |
| MC10806 | Dual Address Register | 1977 |
| MC10808 | Multibit Shifter | 1977 |

M10800-QUAD-IN-LINE PACKAGE

The Motorola M10800 LSI family brings a new integrated circuit package to the industry.

The 48 pin quad-in-line (QUIL) package is designed not to be different, but to be better. It requires only 1.0 square inch of circuit board space and results in a 30% density improvement over the standard 40 pin package.

Microprogrammed Processor

QUAD-IN-LINE QUIL PACKAGE

CASE 725-01
DIMENSIONS IN INCHES.

The figure to the left shows how four of the basic M10800 devices may fit in a processor system. The M10800 building blocks when combined with MECL memories for control, memory storage and register files, results in a cost effective high performance system design. The flexibility, designed into the parts, allows numerous other configurations than that which is shown.

THE MC10800 4-BIT ALU SLICE

INPUT/OUTPUT DIAGRAM

BLOCK DIAGRAM

Contained on this chip are the following functions:

- 4-Bit ALU
- Shift Network
- Accumulator
- I/O Structures

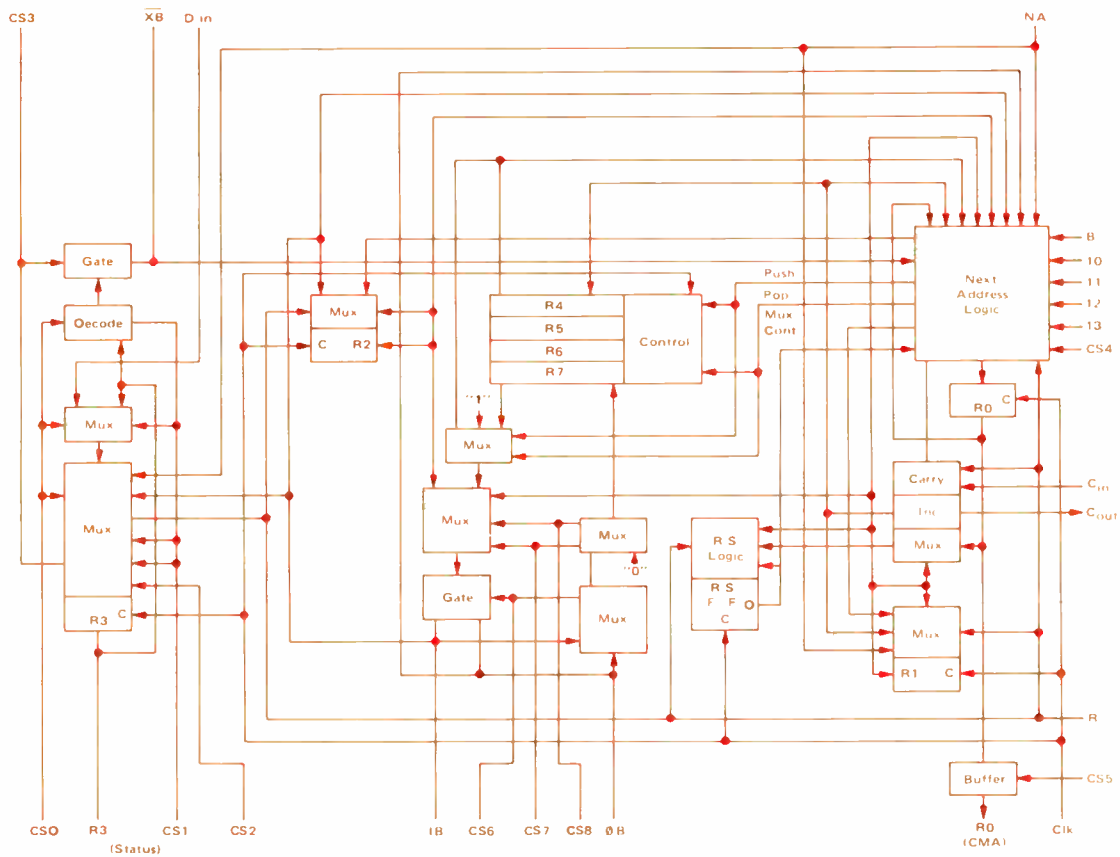

Provisions have been included for lateral expansion to any bit length in increments of 4 bits. Vertical expansion is also permissible—to permit pipelining for increased data throughput rates. The processor slice and associated circuits (MC10801–MC10803) are suitable for use in single or multi-bus systems.

Circuit inputs and outputs consist of the following:

- a) Two bidirectional ports: "O", "I" (4-bit width each). One single direction port: "A".
- b) Two bidirectional lines, one at either end of the shift network (R-1, R4).
- c) Sixteen Select Lines (AS0-AS15), for controlling data flow and for determining operations on data.
- d) Two clock input lines (latch clock AS-16; accumulator clock C).
- e) Carry input line (C_{in}).
- f) Five ALU-status output lines (propagate, generate, carry out, overflow, and zero detect).
- g) Parity output lines.

THE MC10801 MICROPROGRAM CONTROL FUNCTION

BLOCK DIAGRAM

The MC10801 is a component part of the M10800 high-speed microprocessor kit. In addition, this LSI circuit may be used as an independent component, for computer controllers, microprocessors and microcontrollers.

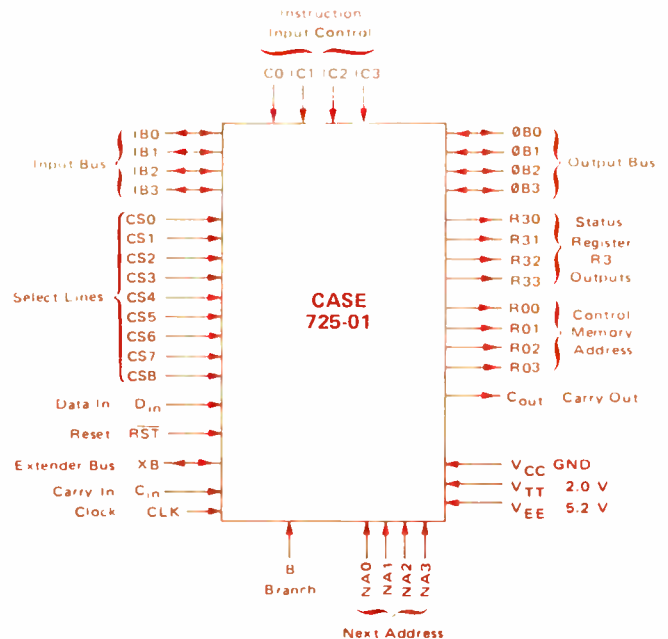

Contained on this chip are the following functions:

- Control Registers (4-bit, expandable)
- Control Memory address register
- 4 x 4 push/pop LIFO stack, for nesting subroutines.
- Sixteen address control functions for conditional and unconditional jumps, and for subroutines
- Internal instruction register, repeat register, and a cascadable 4-bit status register with conditional branch capability

Other features of the MC10801 include:

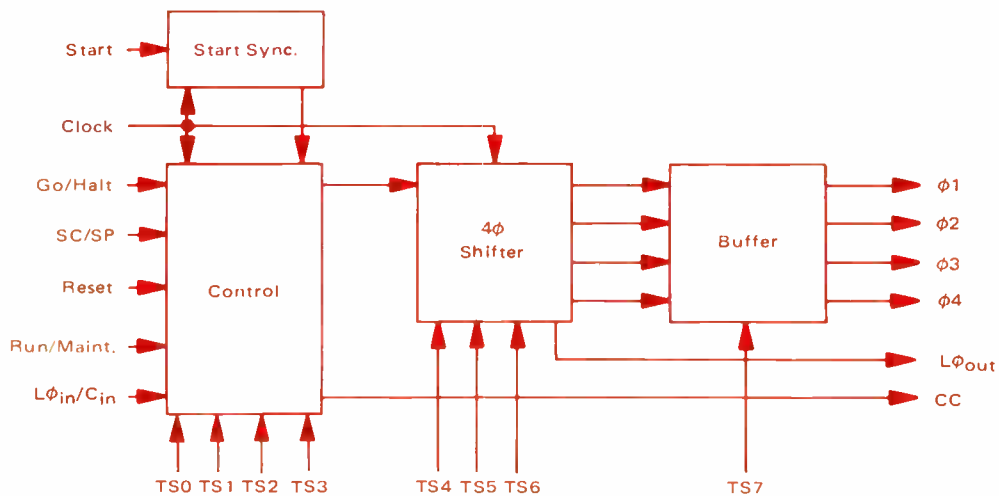

- Next Address mask capability on certain instructions
- 3 separate branch inputs for up to 8-way branch capability (2 chips required)
- Addressing of up to 256 words with a single MC10801 using row/column jumping (65K words with 2 chips)
- Fast increments for incrementing the micro program address register
- Extender Bus for multiple chip operation

INPUT/OUTPUT DIAGRAM

THE MC10802 TIMING FUNCTION

BLOCK DIAGRAM

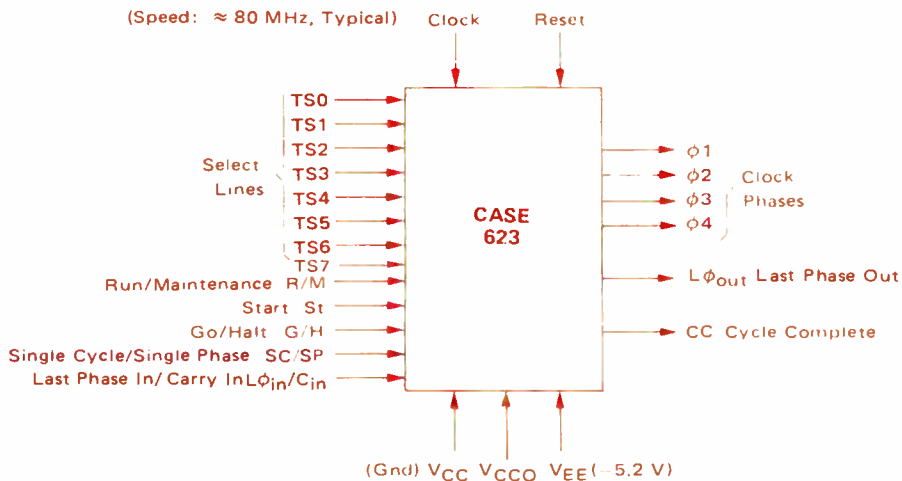

The MC10802 is a component part of the M10800 high-speed microprocessor kit. Contained on this chip are the following functions:

- 4-Phase Clock Counter
- MECL 10,000 Compatible Output
- Start Synchronizer
- Programmable Phases
- Programmable Double Phase Time

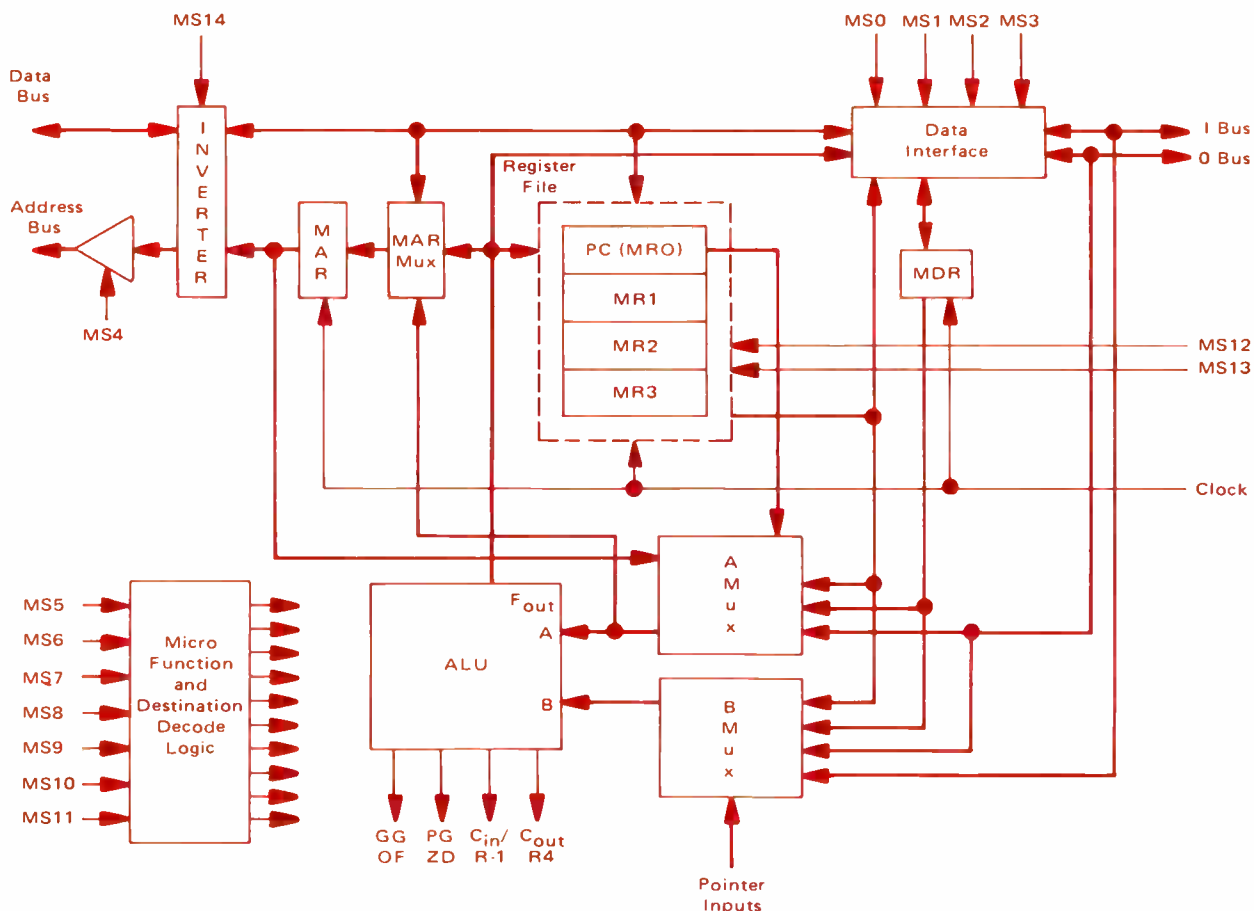

In addition to providing multiphase clock signals, the control inputs on this chip permit single-stepping a microprocessor for diagnostic or checkout purposes.

INPUT/OUTPUT DIAGRAM

THE MC10803 MEMORY INTERFACE

BLOCK DIAGRAM

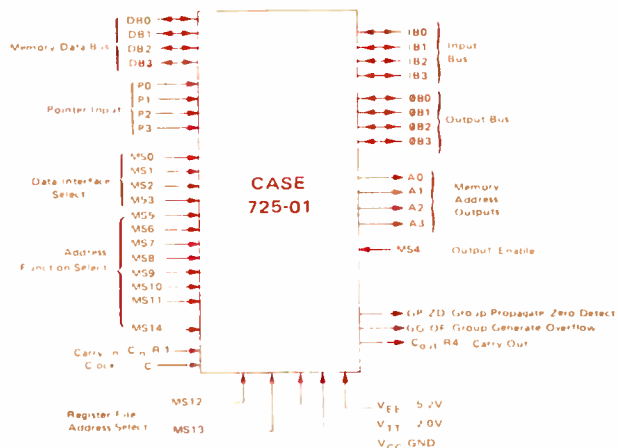

INPUT/OUTPUT DIAGRAM

The MC10803 is a component part of the M10800 high-speed microprocessor kit. Contained on this chip are the following functions:

- Memory Address Register
- Memory Data Register
- ALU for Address Generation and Manipulation
- Four 4-Bit Register Files

This circuit is 4-bits wide and is fully expandable. It is intended to be a basic interface circuit between memory and a processor, for generating memory addresses and routing data. It can also assume ALU responsibility in minimum systems. The MC10803 is capable of twelve basic register/bus-ALU operations, and 17 transfer/storage operations (for data manipulation).

m2900

A Schottky TTL High-Performance 4-Bit Slice Processor Family

MC2901 FOUR-BIT BIPOLAR MICROPROCESSOR SLICE

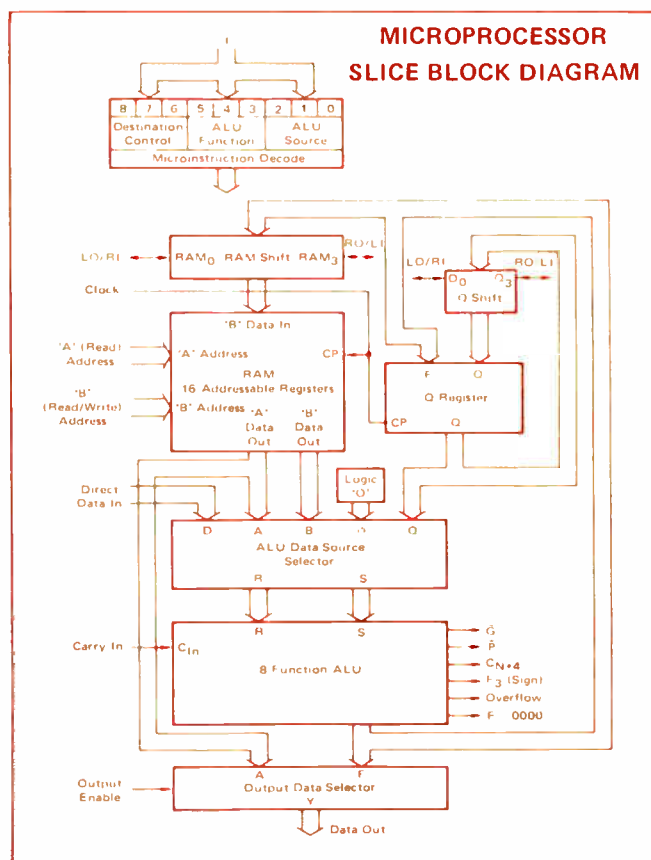

GENERAL DESCRIPTION

The four-bit bipolar microprocessor slice is designed as a high-speed cascadable element intended for use in CPU's, peripheral controllers, programmable microprocessors and numerous other applications. The microinstruction flexibility of the MC2901 will allow efficient emulation of almost any digital computing machine.

The device, as shown in the block diagram below, consists of a 16-word by 4-bit two-port RAM, a high-speed ALU, and the associated shifting, decoding and multiplexing circuitry. The nine-bit microinstruction word is organized into three groups of three bits each and selects the ALU source operands, the ALU function, and the ALU destination register. The microprocessor is cascadable with full look-ahead or with ripple carry, has three-state outputs, and provides various status flag outputs from the ALU. Advanced low-power Schottky processing is used to fabricate this 40-lead LSI chip.

DISTINCTIVE CHARACTERISTICS

- Two-address architecture – Independent simultaneous access to two working registers saves machine cycles.
- Eight-function ALU – Performs addition, two subtraction operations, and five logic functions on two source operands.
- Flexible data source selection – ALU data is selected from five source ports for a total of 203 source operand pairs for every ALU function.
- Left/right shift independent of ALU – Add and shift operations take only one cycle.
- Four status flags – Carry, overflow, zero, and negative.
- Expandable – Connect any number of MC2901's together for longer word lengths.
- Microprogrammable – Three groups of three bits each for source operand, ALU function, and destination control.

| Package Type | Temperature Range | V _{CC} | Device Type |
|--------------|-------------------|------------------|-------------|
| Hermetic DIP | 0°C to +70°C | 4.75 V to 5.25 V | MC2901 LC |
| Hermetic DIP | -55°C to +125°C | 4.50 V to 5.50 V | MC2901 LM |
| Dice | 0°C to +70°C | | MCC2901 C |

MC2909 MICROPROGRAM SEQUENCER

DISTINCTIVE CHARACTERISTICS

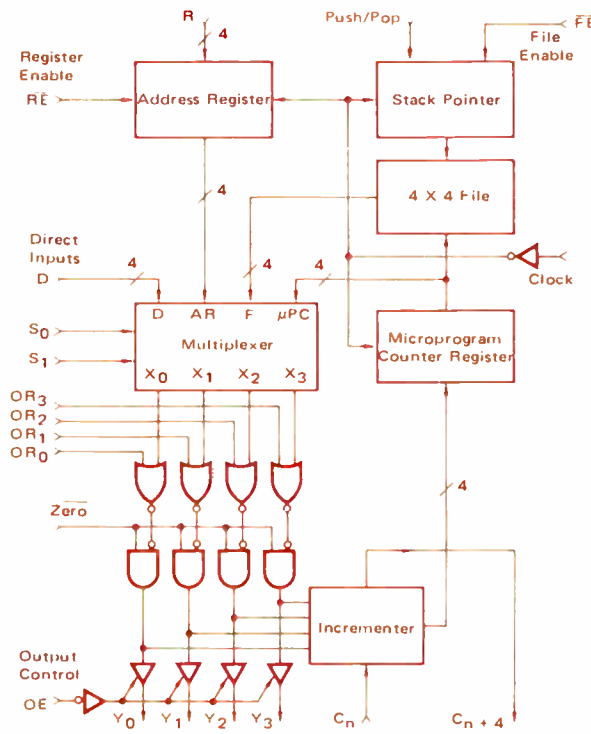

- 4-bit slice cascadable to any number of microwords
- Internal address register
- Branch input for N-way branches
- Cascadable 4-bit microprogram counter
- 4 x 4 file with stack pointer and push pop control for nesting microsubroutines.
- Zero input for returning to the zero microcode word
- Individual OR input for each bit for branching to higher microinstructions
- Three-state outputs
- All internal registers change state on the LOW-to-HIGH transition of the clock

GENERAL DESCRIPTION

The MC2909 is a four-bit wide address controller intended for sequencing through a series of microinstructions contained in a ROM or PROM. Two MC2901's may be interconnected to generate an eight-bit address (256 words), and three may be used to generate a twelve-bit address (4K words).

The MC2909 can select an address from any of four sources. They are: 1) a set of external direct inputs (D); 2) external data from the R inputs, stored in an internal register; 3) a four-word deep push/pop stack; or 4) a program counter register (which usually contains the last address plus one). The push/pop stack includes certain control lines so that it can efficiently execute nested subroutine linkages. Each of the four outputs can be OR'ed with an external input for conditional skip or branch instructions, and a separate line forces the outputs to all zeroes. The outputs are three-state.

MICROPROGRAM SEQUENCER BLOCK DIAGRAM

| Package Type | Temperature Range | V _{CC} | Device Type |
|--------------|-------------------|------------------|-------------|
| Hermetic DIP | 0°C to +70°C | 4.75 V to 5.25 V | MC2909 LC |
| Hermetic DIP | -55°C to +125°C | 4.50 V to 5.50 V | MC2909 LM |
| Dice | 0°C to +70°C | | MCC2909C |

* Contact your nearest Sales Representative for Availability

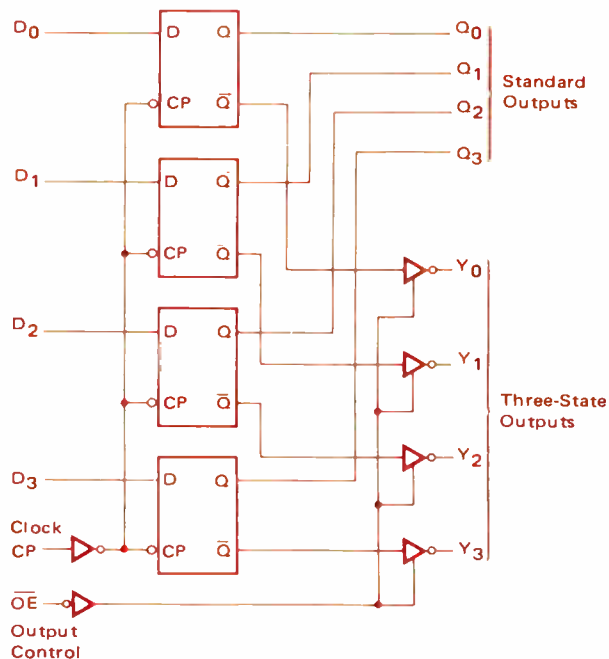

MC2911 Minimicroprogram Sequencer

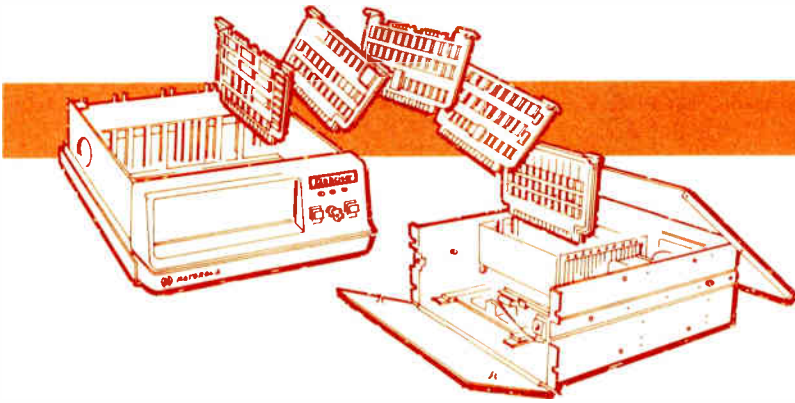

The MC2911 contains nearly all the power of the MC2909 in a space and cost saving 20-pin package. Delay from clock to output is typically 40 ns.

MC2918 One-by-Two Port Register

A four-bit register, one set of inputs; two sets of outputs – three-state and regular Schottky TTL. Ideal for status registers, data bus interfaces.

Micromodules — A New Product Line from Motorola

Microprocessors are changing a lot of design and manufacturing concepts — as well as a lot of well-entrenched and dearly held marketing philosophies. At Motorola, we have always adhered to the charter of supplying the wide range of components needed for the manufacture of electronic equipment, leaving the manufacture of the equipment itself to our customers. While this charter still applies, the MPU has changed the definition of “equipment,” raising it to a higher level of system sophistication and spawning new building blocks of ever-increasing complexity.

It started with Support Products for the M6800 microcomputer components — a series of development aids that permits the system designer to “exercise” the MPU components and to “exorcise” the user program that converts an uneducated computer into a dedicated, functional instrument. Called the EXORciser, this development tool is, in essence, an expandable microcomputer, designed to facilitate emulation and debugging of a systems designer’s unique end product. Obviously, it is more than just a component, but it’s an indispensable stimulant toward the implementation of a specific MPU family. So — If not we, — who?

Expanding The Concept

But the microprocessor itself is more than just another component. It’s a viable, working computer that needs only auxiliary memory and interface (and some dedicated software) to make it useful for an almost infinite variety of processing and control applications. How much memory? How much interface? About the only thing that prevents the manufacturer of a general purpose microprocessor from putting all this memory and interface on the same chip with the MPU is that he can’t anticipate the eventual application. But wouldn’t it be convenient to be able to buy a microcomputer with just the right amount of

circuitry, ready for programming to your needs?

Well, we are not yet ready to build single-chip MPUs dedicated to every conceivable end use, but we can take a lot of the design time out of system hardware implementation. And so, a new Motorola department — *Microsystems* — was born.

Microsystems is an operations group that elevates microcomputer system design from the package level to the board level. Its charter includes the development of interactive modules ranging from complete, off-the-shelf microcomputers with fixed capabilities (ready for dedicated programming), to a variety of mix-and-match board assemblies that give the designer a wide latitude of system options.

The scope of the program is indicated by a family of Micromodules recently introduced. These include (see product descriptions for details):

- A complete single-board Microcomputer
- A CPU (Central Processing Unit) Module
- A 32/ 32 I/O Module
- An 8K/16K AROM/ROM Module

These are supplemented by the existing complementary EXORciser Modules which add five additional memory and interface options to the system. And the near-term introduction schedule is even more impressive, comprising a series of capabilities (A-D/ D-A Modules, Timing and GPIB Modules, etc.) that extend modular simplicity to ever-widening applications.

The Micromodule approach to microcomputer design is offered as an adjunct to, not a substitute for, the more fundamental design with basic components. It is available to those with small volume or limited development and manufacturing resources, or where design and development time-savings is of significance. And it is backed by a custom design capability that could provide cost-effective solutions to complex problems. Your inquiries are invited.

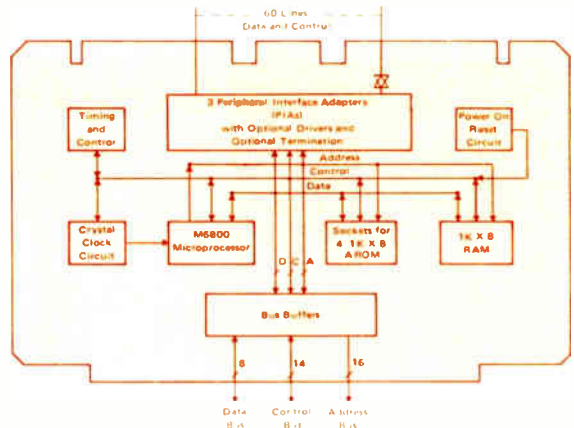

MICROMODULES

MONOBOARD MICROCOMPUTER (Micromodule 1)

M68MM01

Complete microcomputer on a board
 M6800 Microprocessing unit (MPU)
 1MHz crystal controlled clock
 Reset circuitry
 1K RAM
 Sockets for four-1K AROM or ROM
 Three MC6820 peripheral interface adapters
 EXORciser and Micromodule Family bus compatible
 36K bytes of unused memory addresses available
 Dynamic memory refresh circuit

M68MM01

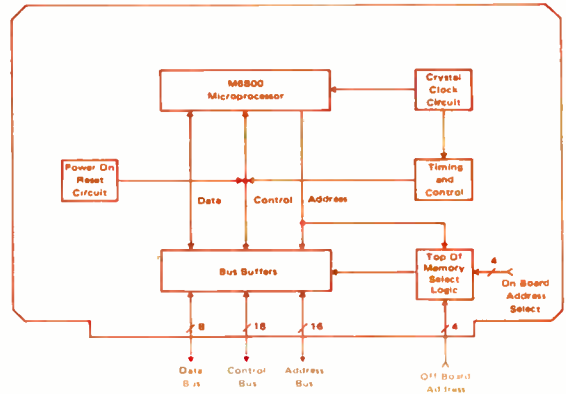

CENTRAL PROCESSING UNIT MODULE (Micromodule 2)

M68MM02

M6800 Microprocessing unit (MPU)
 1MHz crystal controlled clock
 Reset circuitry
 EXORciser and Micromodule Family bus compatible
 Top of user memory address selectable
 Timing and control for three-state, halt, DMA and refresh operations

M68MM02

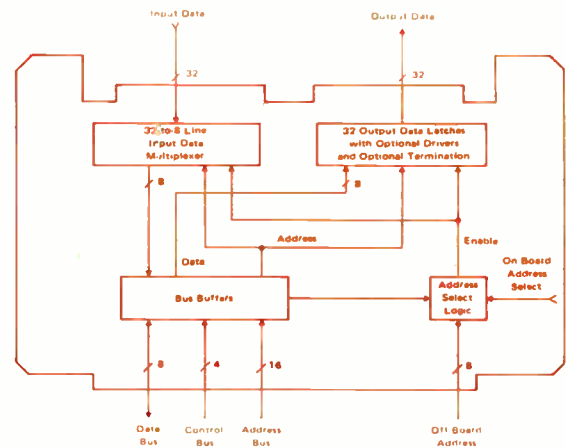

32/32 INPUT/OUTPUT MODULE (Micromodule 3)

M68MM03

32 bits of input in four contiguous 8-bit bytes
 32 bits of latched output in four contiguous 8-bit bytes
 EXORciser and Micromodule Family bus compatible
 Selectable base memory address

M68MM03

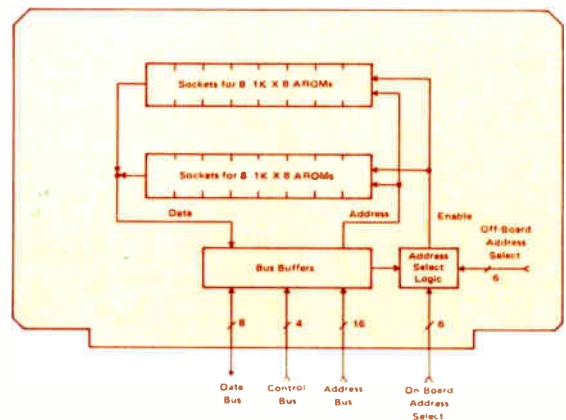

8K/16K AROM/ROM MODULE (Micromodule 4)

M68MM04

Sockets for from one to sixteen 1K x 8-bit AROM or ROM devices
 EXORciser and Micromodule Family bus compatible
 Selectable base memory address for each 8K memory block

M68MM04

MEMORIES

Memories are among the most important parts used in digital data-processing systems. In addition to Read Only and Random Access Memory devices, Motorola also is supplying Memory Systems and Micromodules for those whose requirements go beyond the individual "chip" stage.

Read Only Memories are available from Motorola in three ways:

1. In Mask Programmable (custom program) form; the customer defines the memory content before the final metallization step, permitting the devices to be designed for a specific application.
2. In Programmable (PROM) form; UV Erasable Memories provide flexibility in system development by permitting erasure of memory content and re-programming for current needs. Field-Programmable PROMs allow custom programs on a small-quantity basis through use of fusible nichrome links, bypassing the expense of a mask-program effort.
3. In Pre-Programmed form; these low-cost, off-the-shelf ROMs contain specific popular programs, particularly in code converter and character generator functions.

MICROMODULES

8K/16K AROM/ROM MODULE (Micromodule 4)

M68MM04

Sockets for from one to sixteen 1K x 8-bit AROM or ROM devices
EXORciser and Micromodule Family bus compatible
Selectable base memory address for each 8K memory block

M68MM04

LOGIC FAMILIES

Motorola carries a comprehensive inventory of standard components encompassing all major digital logic families and technologies.

TABLE OF CONTENTS

| | Page |
|---|------|
| COMPLEMENTARY MOS – CMOS | 43 |
| EMITTER-COUPLED LOGIC – MECL | |
| MECL 10,000 Series – High-speed logic family with propagation delays in the 2 ns range | 49 |
| MECL III MC1600 Series – Highest-speed logic family available, with clock frequencies in excess of 500 MHz and propagation delays in the 1 ns range | 51 |
| MEGALOGIC LSI | |
| MC8500 Series – Low-cost LSI components designed for dedicated applications in computer and industrial equipment | 52 |
| TRANSISTOR-TRANSISTOR LOGIC – MTTL | |
| SN54LS00/SN74LS00 Series – Motorola has undertaken the task of becoming a major supplier for high-speed, low-power Schottky TTL product line represented by this series. Contact your Motorola representative for product availability | 53 |
| MC5400/MC7400 Series – Medium-speed family with high noise immunity; designed for applications requiring clock frequencies to 30 MHz and switching speeds in the 12–15 ns range under moderate capacitive loading | 55 |
| MC3100/MC3000 Series (MTTL III – MC74H00/MC54H00) – High-speed family for operation at clock frequencies in the 30–50 MHz range. Features good external-noise immunity, high fan-out and the capability to drive lines up to 600 pF capacitance | 58 |
| MC2100/MC2000 Series (MTTL II – SUHL) – High-speed family with flip-flop clock frequencies as high as 70 MHz | 59 |
| MC500/MC400 Series (MTTL I – SUHL) – Medium speed family with flip-flop clock frequencies up to 35 MHz | 60 |
| MC4300/MC4000 Series, | 61 |
| MC8200/MC7200 Series, | 63 |
| MC9300/MC8300 Series | 64 |
| Complex TTL functions designed for medium-to-high speed operating range. | |

TABLE OF CONTENTS (continued)

DIODE-TRANSISTOR LOGIC – MDTL

MC930/MC930 Series – Wide variety of logic functions for general-purpose, medium-speed applications 65

RESISTOR-TRANSISTOR LOGIC – MRTL

MC800/MC900 Series – Combination of medium-power and low-power dissipation circuits for applications requiring high fan-out 67

HIGH-THRESHOLD LOGIC – MHTL

MC660 Series – Especially designed to meet the high-noise immunity requirements of industrial environments 69

MONOLITHIC DIODE ARRAYS

MC1100 Series – Arrays designed for applications requiring high currents (to 400 mA continuous, in dual in-line package) and fast switching 70

Complementary MOS

Motorola's Complementary MOS (CMOS) design and manufacturing facility offers the inherent advantages of CMOS—low power dissipation, flexible power supply requirements and high noise immunity—in three unique, system-oriented categories:

- A large complement of diversified MSI/SSI components, available off-the-shelf, for complete system designs.
- A group of standard LSI components, dedicated toward the most-effective designs for specifically designated systems.
- A custom capability for the development and production of proprietary customer-initiated circuits.

OFF-THE-SHELF MSI/SSI CIRCUITS

Series MC14000/MC14500

These standard lines of MSI/SSI circuits contain a large complement of devices designed to the new JEDEC B-Series Specification with low-power Schottky-compatible buffered outputs. The B-Series line is broad enough (more than 100 device types are now available) to permit complete system design. Compatibility with Motorola non-buffered devices (with increased speed capabilities) and with Schottky TTL provides mix and match versatility for added performance potential. Devices are available in ceramic and top-reliability plastic packages.

STANDARD LSI

Series MC14400

This series of highly complex devices consists of single-chip subsystems tailored for specific applications. Designed to maximize efficiency in systems requiring large-scale timing, control, conversion and interface functions, these circuits find wide potential use in industrial/commercial electronic systems.

CUSTOM CMOS

A new and modern facility in Austin, Texas is devoted exclusively to the design and production of MOS components. Motorola-developed design techniques now permit a combination of both digital and linear functions on the same chip, thereby extending the performance enhancement of customer-required special functions. For details regarding the custom capability, please consult your Motorola Sales Office.

Note: Ask your sales representative for copies of Reliability Reports:

CMOS LIFE STRESS TESTING

CMOS PLASTIC PACKAGING SYSTEM

CMOS INTEGRATED CIRCUITS

B-SERIES FAMILY DATA

The CMOS Devices which have a B suffix meet the minimum values for the industry-standardized* family specification for the B Series. Some of these standardized values are shown in the Maximum Ratings table.

The B-Series devices are compatible with the other devices in the CMOS product line. Features include:

- All buffered outputs
- 3–18 volt operational limits
- Capable of driving two low-power TTL loads, one low-power Schottky TTL load, or two HTL loads over the rated temperature range
- Maximum input current of $\pm 1 \mu\text{A}$ at 15 volt power supply over the temperature range
- Parameters specified at 5.0, 10, and 15 volt supply
- Noise margins of 1.0 V min @ 5.0 V supply
2.0 V min @ 10 V supply
2.5 V min @ 15 V supply

For the industry-standardized B series, the maximum ratings and recommended operating range are shown at the bottom of this page. Additional specification values are shown on the individual data sheets.

Switching characteristics for the B-Series devices are specified under the following conditions:

- Load Capacitance, C_L , of 50 pF
- Input pulse voltage equal to $+V_{DD}$ supply voltage
- Input pulse rise and fall times of 20 ns
- Propagation Delay times measured from 50% point of input voltages to 50% point of output voltage
- Three different supply voltages: 5, 10, and 15 V

Exceptions to the B-Series Family Specification

There are a number of devices which have a B suffix whose input and/or outputs vary somewhat from the B-Series family specification because of functional requirements. Some categories of notable exceptions are:

- Inverting buffers with only one stage of buffering do not meet the input voltage specification.

- Devices with specialized outputs on the chip, such as NPN emitter-follower drivers or transmission gates, do not meet output specifications.
- Devices with specialized inputs, such as oscillator inputs, have unique input specifications.

Input Voltage

The input voltage specification is interpreted as the worst-case input voltage to produce an output level of "1" or "0". The "1" or "0" output level is defined as a deviation from the supply (V_{DD}) and ground (V_{SS}) levels. For a 5.0 V supply, this deviation is 0.5 V; for a 10 V supply, 1.0 V; and for 15 V, 1.5 V. As an example, in a device operating at a 5.0 V supply, the device with the input starting at ground is guaranteed to switch on or before 3.5 V and not to switch up to 1.5 V. Switching and not switching are defined as within 0.5 V of the ideal output level for the example with a 5.0 V supply. The actual switching level referred to the input is between 1.5 V and 3.5 V.

Noise Margin

The values for input voltage and the given defined output deviation lead to minimum noise margins of 1.0 V, 2.0 V, and 2.5 V for a 5.0 V, 10 V, and 15 V supply, respectively.

Output Device Current

Devices in the B Series are capable of sinking a minimum of 0.36 mA over the temperature range with a 5.0 V supply. This value guarantees that these CMOS devices will drive low-power Schottky TTL inputs which require 0.36 mA maximum over the temperature range.

Compatibility

Other devices in the CMOS line not labeled with the B suffix also have 3.0 to 18 volt operating limits. These devices are fully compatible with B-Series devices over the full voltage range. Notable in this group is a series of eight gates available in nonbuffered (numbered without the B suffix) and buffered designs (B suffix on the part number).

MAXIMUM RATINGS (Voltages referenced to V_{SS} .)

| Rating | Symbol | Value | Unit |
|---|-----------|------------------------|--------------------|
| DC Supply Voltage | V_{DD} | -0.5 to +18 | Vdc |
| Input Voltage, All Inputs | V_{in} | -0.5 to $V_{DD} + 0.5$ | Vdc |
| DC Current Drain per Pin | I | 10 | mAdc |
| Operating Temperature Range — AL Device | T_A | -55 to +125 | $^{\circ}\text{C}$ |
| CL/CP Device | | -40 to +85 | |
| Storage Temperature Range | T_{stg} | -65 to +150 | $^{\circ}\text{C}$ |

RECOMMENDED OPERATING RANGE

| | | | |
|-------------------|----------|-------------|-----|
| DC Supply Voltage | V_{DD} | +3.0 to +15 | Vdc |
|-------------------|----------|-------------|-----|

*Specifications coordinated by EIA/JEDEC Solid-State Products Council.

CMOS SELECTION GUIDE BY FUNCTION

| Device Type | Function | Device Type | Function |
|--------------------------|--|---|---|
| NAND Gates | | Decoders/Encoders | |
| MC14011 | Quad 2-Input NAND Gate | MC14028B | BCD-to-Decimal/Binary-to-Octal Decoder |
| MC14011B | Quad 2-Input NAND Gate | MC14514B | 4-Bit Latch/4-to-16 Line Decoder (High) |
| MC14093B | Quad 2-Input NAND Schmitt Trigger | MC14515B | 4-Bit Latch/4-to-16 Line Decoder (Low) |
| MC14023 | Triple 3-Input NAND Gate | MC14532B | 8-Bit Priority Encoder |
| MC14023B | Triple 3-Input NAND Gate | MC14555B | Dual Binary-to-1-of-4 Decoder/Demultiplexer |
| MC14012 | Dual 4-Input NAND Gate | MC14556B | Dual Binary-to-1-of-4 Decoder/Demultiplexer (Inverting) |
| MC14012B | Dual 4-Input NAND Gate | | |
| MC14068B | 8-Input NAND Gate | | |
| NOR Gates | | Display Decoders | |
| MC14001 | Quad 2-Input NOR Gate | MC14511B | BCD-to-Seven Segment Latch/Decoder/Driver |
| MC14001B | Quad 2-Input NOR Gate | MC14513B | BCD-to-Seven Segment Latch/Decoder/Driver |
| MC14025 | Triple 3-Input NOR Gate | MC14543B | BCD-to-Seven Segment Latch/Decoder/Driver |
| MC14025B | Triple 3-Input NOR Gate | MC14558B | BCD-to-Seven Segment Decoder |
| MC14000 | Dual 3-Input NOR Gate plus Inverter | | |
| MC14002 | Dual 4-Input NOR Gate | | |
| MC14002B | Dual 4-Input NOR Gate | | |
| MC14078B | 8-Input NOR Gate | | |
| AND Gates | | Multiplexers/Demultiplexers/Bilateral Switches | |
| MC14081 | Quad 2-Input AND Gate | MC14016B | Quad Analog Switch/Quad Multiplexer |
| MC14081B | Quad 2-Input AND Gate | MC14066B | Quad Analog Switch/Quad Multiplexer |
| MC14073B | Triple 3-Input AND Gate | MC14053B | Triple 2-Channel Analog Multiplexer/Demultiplexer |
| MC14082B | Dual 4-Input AND Gate | MC14052B | Dual 4-Channel Analog Multiplexer/Demultiplexer |
| | | MC14529B | Dual 4-Channel Analog Data Selector |
| | | MC14539B | Dual 4-Channel Data Selector/Multiplexer |
| | | MC14051B | 8-Channel Analog Multiplexer/Demultiplexer |
| | | MC14512 | 8-Channel Data Selector |
| | | MC14519B | 4-Bit AND/OR Selector |
| OR Gates | | Schmitt Triggers | |
| MC14071 | Quad 2-Input OR Gate | MC14093B | Quad 2-Input NAND Schmitt Trigger |
| MC14071B | Quad 2-Input OR Gate | MC14583B | Dual Schmitt Trigger |
| MC14075B | Triple 3-Input OR Gate | MC14584B | Hex Schmitt Trigger |
| MC14072B | Dual 4-Input OR Gate | | |
| Complex Gates | | Flip-Flops/Latches | |
| MC14070B | Quad Exclusive OR Gate | MC14013B | Dual Type-D Flip-Flop |
| MC14077B | Quad Exclusive NOR Gate | MC14027B | Dual J-K Flip-Flop |
| MC14501 | Triple Gate (Dual 4-Input NAND Gate and 2-Input NOR/OR Gate or 8-Input AND/NAND Gate) | MC14042B | Quad Latch |
| MC14506B | Dual Expandable AND-OR-INVERT Gate | MC14043B | Quad NOR R-S Latch |
| MC14507 | Quad Exclusive OR Gate | MC14044B | Quad NAND R-S Latch |
| MC14519B | 4-Bit AND/OR Selector (Quad 2-Channel Data Selector or Quad Exclusive NOR Gate) | MC14076B | Quad D-Type Register |
| MC14530B | Dual 5-Input Majority Logic Gate | MC14175B | Quad Type-D Flip-Flop |
| MC14572 | Hex Gate (Quad Inverter plus 2-Input NOR Gate plus 2-Input NAND Gate) | MC14508B | Quad 4-Bit Latch |
| | | MC14174B | Hex Type-D Flip-Flop |
| Inverters/Buffers | | Shift Registers | |
| MC14007B | Dual Complementary Pair plus Inverter | MC14035B | 4-Bit Parallel-In/Parallel-Out Shift Register |
| MC14049B | Hex Inverter/Buffer | MC14194B | 4-Bit Bidirectional Universal Shift Register |
| MC14050B | Hex Buffer | MC14015B | Dual 4-Bit Static Shift Register |
| MC14069B | Hex Inverter | MC14014B | 8-Bit Static Shift Register (Synchronous) |
| MC14502B | Strobed Hex Inverter/Buffer | MC14021B | 8-Bit Static Shift Register (Asynchronous) |
| MC14503B | Hex 3-State Buffer | MC14034B | 8-Bit Universal Bus Register |
| MC14584B | Hex Schmitt Trigger | MC14006B | 18-Bit Static Shift Register |
| | | MC14557B | 1-to-64 Bit Variable Length Shift Register |
| | | MC14517B | Dual 64-Bit Static Shift Register |
| | | MC14562B | 128-Bit Static Shift Register |

INTEGRATED CIRCUITS

MC8500 Series (0 to +75°C)

MEGALOGIC LSI

Designers can now implement highly complex systems with only a few basic off-the-shelf LSI components. Benefits include lower system costs, off-the-shelf availability, improved reliability, lower system power drain, fewer parts to assemble and inspect, and more compact system architecture.

| Device | Function | Case | Applications |
|------------------|--|----------|--|
| MC8500 | CRCC Generator | 623, 649 | Magnetic tape drive controllers using NRZI or GCR recordings, 7 or 9 channels. |
| MC8501 | Error Pattern Register | 620, 648 | |
| MC8502 | LRCC/Data Register | 623, 649 | |
| MC8503 | Universal Polynomial Generator (16-bit) | 632, 646 | Cassette, floppy disc, data communications |
| MC8504 | Universal Presettable Polynomial Generator (4-Bit, Cascadable) | 620, 648 | High-speed disc controllers, digital filtering |
| MC8505 | MOS Dynamic Memory Refresh Logic Circuit | 620, 648 | Add-on memory, memory applications |
| MC8506 | Polynomial Generator (16-Bit) | 620, 648 | Floppy disc, SDLC terminals |
| MC8507 MC6828 | Priority Interrupt Controller | 623, 649 | PIC is used to add prioritized responses to inputs to micro-processor systems |
| MC8520 | Deskew/Queue Register | 623 | Magnetic tape drive controllers, phase encoded |

MTTL 54LS00/74LS00

INTEGRATED CIRCUITS

SN74LS00 Series (0 to +75°C)
SN54LS00 Series (-55 to +125°C)

LS Low Power Schottky TTL family combines a current and power reduction by a factor 5 (compared to 7400 TTL) with anti-saturation Schottky diode clamping and advanced processing, using shallower diffusions and higher sheet resistivity to achieve circuit performance better than conventional TTL. A full complement of TTL functions will become available during 1977. Contact your Motorola representative for complete details.

MTTL III

INTEGRATED CIRCUITS

MC3000 Series /MC74H00 (0 to +75°C)
MC3100 Series /MC54H00 (-55 to +125°C)

MTTL III integrated circuits comprise a family of transistor-transistor logic designed for general purpose digital applications. The family has a high operating

speed (30–50 MHz clock rate), good external noise immunity, high fan-out, and the capability of driving lines up to 600 pF capacitance.

① F suffix denotes Flat Package, L suffix denotes Dual In Line Ceramic Package, P suffix denotes Plastic Package.
(i.e., MC3000F = Flat Package, MC3000L = Ceramic Package, MC3000P = Plastic Package).

* Direct Output = 10 minus the number of resistor terminated outputs being used.

MTTL II

INTEGRATED CIRCUITS

MTTL II integrated circuits comprise a family of transistor-transistor logic designed for general purpose digital applications. The family has a high operating speed (30–50 MHz clock rate),

MC2000 Series (0 to +75°C)
MC2100 Series (-55 to +125°C)

good external noise immunity, high fan-out, and the capability of driving capacitive loads to 600 pF.

MTTL COMPLEX FUNCTIONS

INTEGRATED CIRCUITS

MC4000 Series (0 to +75°C)
MC4300 Series (-55 to +125°C)

The MTTL complex functions are designed for digital applications in the medium to high-speed range.

These MTTL devices provide significant reduction in package count and increased logic per function over devices in the basic MTTL and MDTL families.

FUNCTIONS AND CHARACTERISTICS ($V_{CC} = 5.0 \text{ V}$, $T_A = 25^\circ\text{C}$)

All devices shown can be used with all MTTL and MDTL devices, however, the loading factors shown reflect use with other devices in the same MC number series unless otherwise noted

| Function | Operating Operating Range | | Case | Output Loading Factor Each Output | Propagation Delay t_{pd} ns typ | Power Dissipation P_D mW typ/pkg |

INTEGRATED CIRCUITS

MC830 Series (0 to +75°C)
MC930 Series (-55 to +125°C)

MDTL integrated circuits provide an excellent balance of speed, power dissipation, and noise immunity for general purpose digital applications. The line includes many multifunction types. Additional logic power is provided by the "wired OR" capability of the basic MDTL gate.

MAXIMUM RATINGS

| Rating | Value | Unit |
|--|----------------------------|-------------|
| Supply Voltage – Operating Continuous Pulsed, < 1 second | 4.5 to 5.5 8.0 12 | Vdc |

MRTL/mW MRTL

INTEGRATED CIRCUITS

MC800 Series (0 to 75°C)
MC900 Series (-55 to +125°C)

Medium-power MRTL integrated circuits provide a broad line of low-cost, multi-function, digital circuits. Typical gate speed is 12 ns, with power dissipation averages of 19 mW (input high) and 5.0 mW (inputs low) per logic node. Devices from the MC800 Series have loading factors normalized for compatibility with the low-power mW MRTL devices for ease in mixing the two power levels in a system.

Low-power mW MRTL integrated circuits are designed for use where minimal system power consumption is desired. Typical gate speed is 27 ns, with typical power dissipation of 6.5 mW (input high) and 0.5 mW (inputs low) per logic node. Devices from the mW MRTL Series can be mixed with devices from the medium-power MRTL Series which has loading factors normalized for compatibility.

FUNCTIONS AND CHARACTERISTICS

($V_{CC} = 3.0 \text{ V} \pm 10\%$ for MC900 Series devices.)
($V_{CC} = 3.6 \text{ V} \pm 10\%$ for MC800 Series devices.)
(Power Dissipation and t_p typicals at $T_A = 25^\circ\text{C}$.)

"A" Suffix devices have insured capability to drive at least one MTTL load or two MDTL loads.

- ① G suffix denotes Metal, F suffix Flat Package, P suffix denotes Plastic Package, L suffix denotes dual inline Ceramic Package.
- ② Inputs High/Inputs Low unless otherwise noted.
- ③ Only clock inputs High/Input Low.
- ④ Only clock inputs high on Flip-Flop, other elements High/Inputs Low.
- ⑤ Direct Set & Direct Clear Low, all other inputs high/all inputs low.
- ⑥ One input high/one input low.

INTEGRATED CIRCUITS

MC660P, L Series (-30 to +75°C)
*MC660TL Series (-55 to +125°C)

Motorola's MHTL integrated circuits are especially designed to meet the requirements of industrial applications because of the outstanding noise immunity. MHTL circuits provide error-free operation in high noise environments far beyond the tolerance of other integrated circuit families. Multifunction packages and broad operating temperature range further tailor this device family to the industrial designer's requirements.

*MHTL ceramic dual in-line devices are available with specification over the -55°C to +125°C temperature range and/or with hi-rel processing on special order. See your Motorola representative for pricing.

Package drawings are shown on page 68.

TYPICAL CHARACTERISTICS

| Rating | Value | Unit |
|--|--------------|------------|
| Supply Voltage | 15 ± 1.0 | Vdc |
| Threshold Voltage | 7.5 | Vdc |
| Logic "0" Output Voltage @ I _{OL} = 5 mA (Active Pullup Output) (Passive Pullup) | 1.0 0.4 | Vdc Vdc |
| Logic "1" Output Voltage @ V _{CC} = 15 V (Active Pullup Output) (Passive Pullup) | 14.4 14.9 | Vdc Vdc |
| Noise Margin | 6.0 | Vdc |

MONOLITHIC DIODE ARRAYS

MC1100 Series (-55 to +150°C)

Motorola diode arrays are monolithic multiple junction-isolated diodes, fabricated using a standard integrated circuit planar process. The arrays can be used in any application requiring high current and fast switching.

MAXIMUM RATINGS (For each diode, $T_A = 25^\circ\text{C}$ Free Air Temperature)

INTERFACE CIRCUITS

The economics of today's marketplace dictate that electronic systems be developed largely with semiconductor devices that are designed and manufactured on a large-volume basis. This requirement, in turn, demands that these semiconductor components be "generic" in design, so that they can be used for a variety of systems with widely diversified capabilities and characteristics.

To a significant degree, the above prerequisites prohibit the tailoring of integrated circuits—even MSI and LSI components—to a specifically designated end-product. While specific families are engineered to work together harmoniously, it is often advantageous to mix functions from a number of families in order to derive performance or economic benefits. And, often, such conglomerates require matching, level translation or driver enhancement.

Even within a single family, interfacing in terms of fan-out enhancement or power boosting is often required.

Motorola's broad line of products, encompassing all popular device families and technologies, has generated a comprehensive insight into interface requirements. It has spawned a large and continuously expanding repertoire of interface circuits to meet the needs of the system designer.

TABLE OF CONTENTS

| | Page |
|--|------|
| Bus Interface | 72 |
| D-A/A-D Conversion | 76 |
| Memory Interface | 77 |
| Computer and Terminal Interface | 82 |
| Peripheral Interface | 84 |
| Numeric Display Interface | 85 |
| Voltage Comparators | 86 |
| Communications Interface (Telephony) | 88 |

BUS INTERFACE

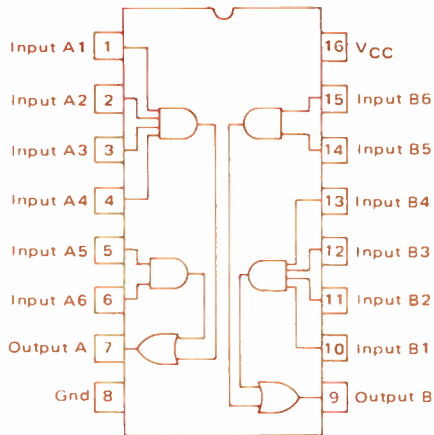

Computer Bus

Line drivers and receivers designed to operate compatibly. The MC8T13/MC8T14 combination is specified

DUAL LINE DRIVERS

MC8T13 – Open emitter driver; specified for general TTL systems.

MC8T23 – Open emitter driver; specified to meet IBM system requirements.

All four devices:
 $T_A = 0$ to 75°C
 Packages:
 L Suffix – Case 620
 P Suffix – Case 648

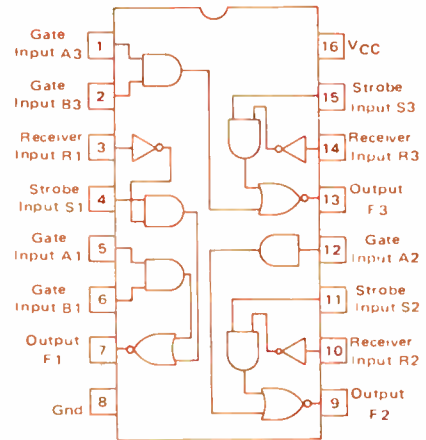

| Device Number | V_{OH} @ $I_{OH} = -75$ mA @ $I_{OH} = -59.3$ mA* | I_{OS} @ $V_O = 0$ mA Max | t_{PLH} @ $C_L = 15$ pF ns Max |
|---------------|---|-----------------------------------|--|
| MC8T13 | 2.4 | 30 | 20 |
| MC8T23 | 3.11* | -30 | 20 |

for general TTL system applications. The MC8T23/MC8T24 combination is specifically oriented toward IBM 360/370 system requirements.

TRIPLE LINE RECEIVERS

MC8T14 – Hysteresis-equipped receiver; specified for general TTL systems.

MC8T24 – Hysteresis-equipped receiver; specified to meet IBM system requirements.

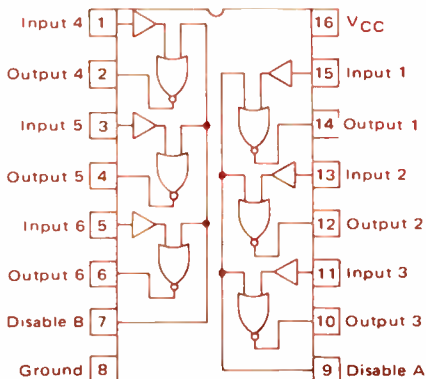

| Device Number | $V_{H(R)}$ Volts Min | $I_{H(R)}$ @ $V_{IH(R)} = 3.8$ V @ $V_{IH(R)} = 3.11$ V* | $t_{PLH(R)}$ @ $C_L = 15$ pF ns Max |
|---------------|-------------------------|--|---|
| MC8T14 | 0.3 | 0.17 | 30 |
| MC8T24 | 0.2 | 0.17* | 30 |

Minicomputer Bus

Transceivers and receivers for bus organized minicomputers employing 120-ohm terminated lines.

HEX RECEIVERS

MC3437 – Hysteresis-equipped for improved noise immunity. DS8837 equivalent.

All three devices:
 $T_A = 0$ to 70°C
 Packages:
 MC3437
 MC3438
 DS8641
 L Suffix – Case 620 – J Suffix
 P Suffix – Case 648 – N Suffix

| $I_{I(R)}$ @ $V_{I(R)} = 4.0$ V μA Max | Hysteresis Volts Min | $t_{PLH(R)}$ @ $C_L = 15$ pF ns Max |
|---|-------------------------|---|
| 50 | 0.5 | 30 |

QUAD TRANSCEIVERS

MC3438 DS8641 – Open collector driver outputs allow wire-OR connection. MC3438 has hysteresis-equipped receiver for improved noise immunity (not available with DS8641). MC3438 is equivalent DS8838.

| Receiver Hysteresis Volts | $V_L(\text{BUS})$ @ $I_{\text{BUS}} = 50$ mA Volts Max | I_{BUS} @ $V_{IH(\text{BUS})} = 4.0$ V μA Max | $t_{PLH(D)}$ @ $C_L = 15$ pF ns Max | $t_{PLH(R)}$ @ $C_L = 15$ pF ns Max |
|------------------------------|--|---|---|---|
| 0.25* | 0.7 | 100 | 25 | 30 |

*MC3438 only.

Microcomputer Bus

This family of devices is designed to extend the limited drive capabilities of today's standard 6800 and 8080 type NMOS microprocessors. All devices are fabricated with Schottky TTL technology for high speed.

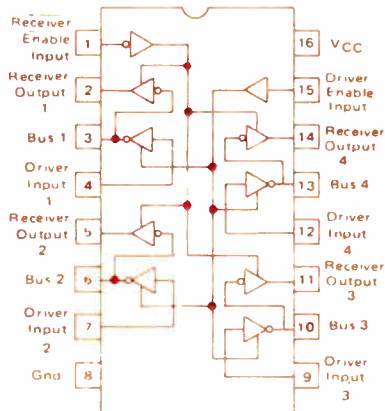

General features include:

- Single +5.0 V Power Supply Requirement
- Three-State Logic Output
- Low Input Loading – 200 μ A Max.

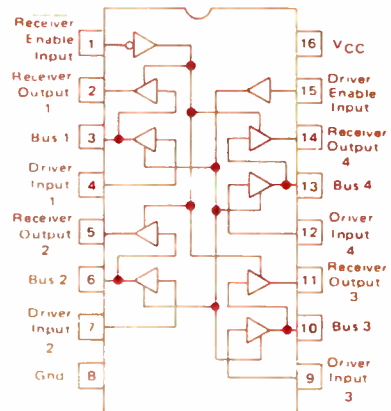

DATA BUS EXTENDERS

Quad, Bidirectional, with 3-State Outputs

MC6880A/MC8T26A# – Inverting

MC6889/MC8T28# – Non-inverting

≠ These devices may be ordered by either of the paired numbers.

Both types:
 $T_A = 0$ to 75°C
 Packages:
 L Suffix – Case 620
 P Suffix – Case 648

| Device Number | Input Current | | I_{OHL} Output Disabled Leakage Current – High Logic State $\mu\text{A Max}$ | t_{PLH}, t_{PHL} Propagation Delay Time – High to Low or Low to High ns Max |
|-----------------|-------------------------------|-------------------------------|---|--|
| | I_{IH} $\mu\text{A Max}$ | I_{IL} $\mu\text{A Max}$ | | |
| MC6880A/MC8T26A | 25 | -200 | 100 | 14 |
| MC6889/MC8T28 | 25 | -200 | 100 | 17 |

ADDRESS AND CONTROL BUS EXTENDERS

Hex, Unidirectional, with 3-State Outputs

MC6885/MC8T95# – Non-inverting

MC6886/MC8T96# – Inverting

Two-input Enable controls all six buffers.

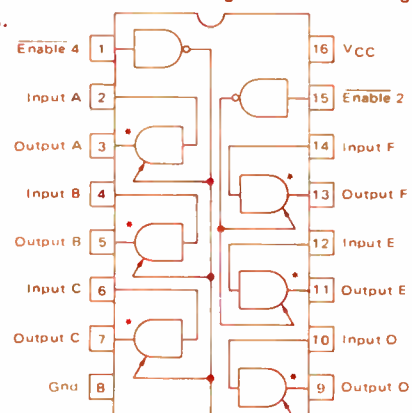

*Add inverter for MC6886/MC8T96.

MC6887/MC8T97# – Non-inverting

MC6888/MC8T98# – Inverting

Two Enable inputs, one controlling four buffers and the other controlling the remaining two buffers.

*Add inverter for MC6888/MC8T98.

≠ These devices may be ordered by either of the paired numbers.

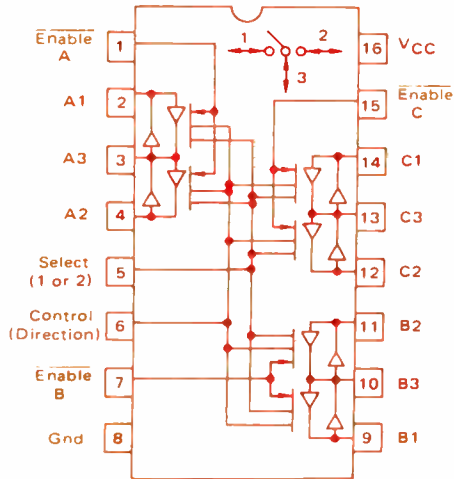

All four types:
 $T_A = 0$ to 75°C
 Packages:
 L Suffix – Case 620
 P Suffix – Case 648

| V_{OL} @ $I_{OL} = 48$ mA Volts Max | V_{OH} @ $I_{OH} = -5.2$ mA Volts Min | I_{OS} mA Typ | t_{PLH} ns Typ | $t_P(\text{Enable})$ ns Typ |
|---|---|--------------------|---------------------|--------------------------------|
| 0.5 | 2.4 | -80 | 6.0 | 11 |

Microcomputer Bus (continued)

BIDIRECTIONAL BUS SWITCH

MC6881/MC3449# – For exchanging TTL level digital information between selected pairs of ports in a 3-port network.

#This device may be ordered by either of the numbers.

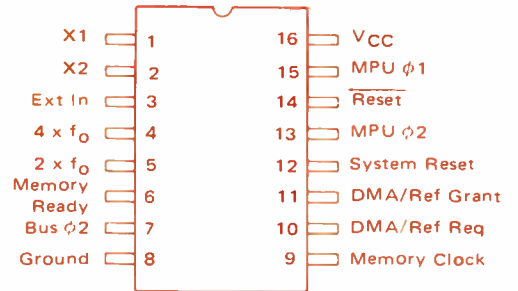

Both types:
 $T_A = 0$ to 70°C

Packages:
 L Suffix – Case 620
 P Suffix – Case 648

| | | | |
|--|--|---|---|
| V_{OL} @ $I_{OL} = 8.0$ mA Volts Max | I_{OD} @ $V_O = 2.7$ V μA Max | I_{IL} @ $V_{IL} = 0.4$ V μA Max | I_{IH} @ $V_{IH} = 2.7$ V μA Max |
| 0.5 | 25 | -200 | 40 |

M6800 CLOCK GENERATOR

MC6875 – Provides the non-overlapping two-phase clock signals for M6800 MPU systems.

$V_{OLC} = 0.3$ V Max
 $V_{OHC} = V_{CC} - 0.3$ V Min
 $f_{op} = 2.0$ MHz Typ

MC6881/MC3449 TRUTH TABLE

| Enable | Select | Control | Data Flow |
|--------|--------|---------|----------------|
| 0 | 0 | 0 | 2→3 |

X Don't Care

Instrumentation Bus

HIGH-CURRENT PARTY-LINE BUS TRANSCEIVERS

Devices for industrial control and data communication.

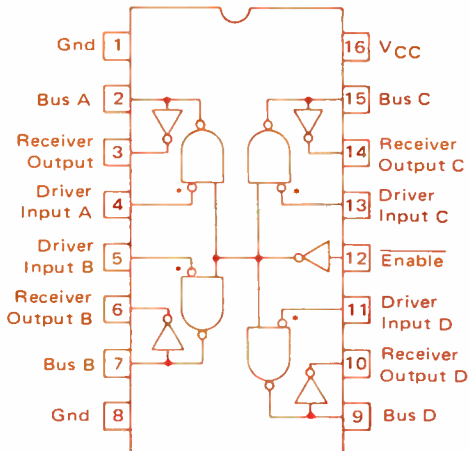

MC26S10 – Inverting

MC26S11 – Non-inverting

Quad transceivers with open-collector drivers and PNP-buffered inputs for MOS compatibility.

Both types:
 $T_A = 0$ to 70°C

Packages:
 L Suffix – Case 620
 P Suffix – Case 648

*Inverter on MC26S11 only.

| Test | Condition | Limits |
|--------------|-------------------------------------|-----------------------|
| V_{OL} (D) | $I_{OL} = 100$ mA | 0.8 Volts Max |
| I_O (D) | $V_{OH} = 4.5$ V | 100 μA Max |
| I_{O1} (D) | $V_{CC} = 0$ V, $V_{OH} = 4.5$ V | 100 μA Max |
| I_{IH} (D) | $V_{IH} = 2.7$ V | 30 μA Max |
| I_{IL} (D) | $V_{IL} = 0.4$ V | -0.54 mA Max |
| t_P (D) | MC26S10 | 15 ns Max |
| | MC26S11 | 19 ns Max |
| t_P (R) | Both Types | 15 ns Max |

Instrumentation Bus (continued)

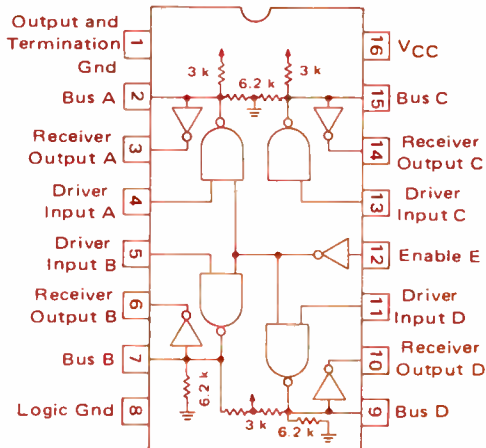

QUAD INTERFACE TRANSCEIVERS

These devices are designed to meet the HP-IB bus specification of IEEE Standard 488-1975, for the interconnection of Measurement Apparatus.

MC3440P – Three drivers with common Enable input; one driver without Enable.

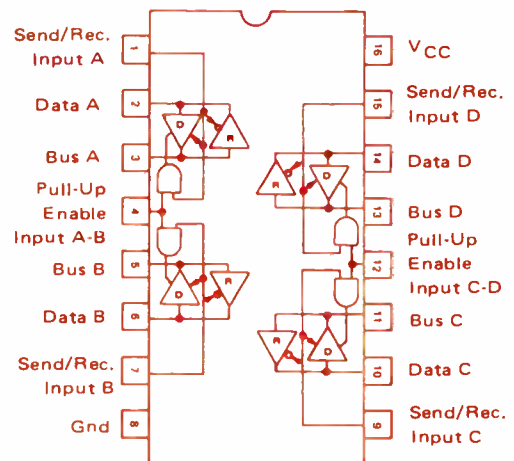

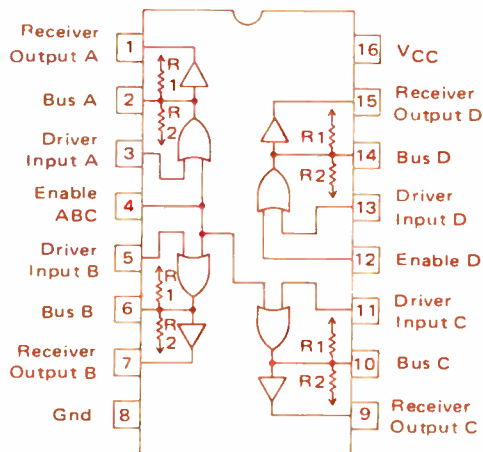

MC3441P – Four drivers with common Enable input.

MC3443P – Four drivers with common Enable input; no termination resistors.

MC3446P – For low-power instruments, including MOS.

MC3448P – For common Send-Receive bus; bidirectional.

All types:
 $T_A = 0 \text{ to } 70^\circ\text{C}$
 Package – Case 648

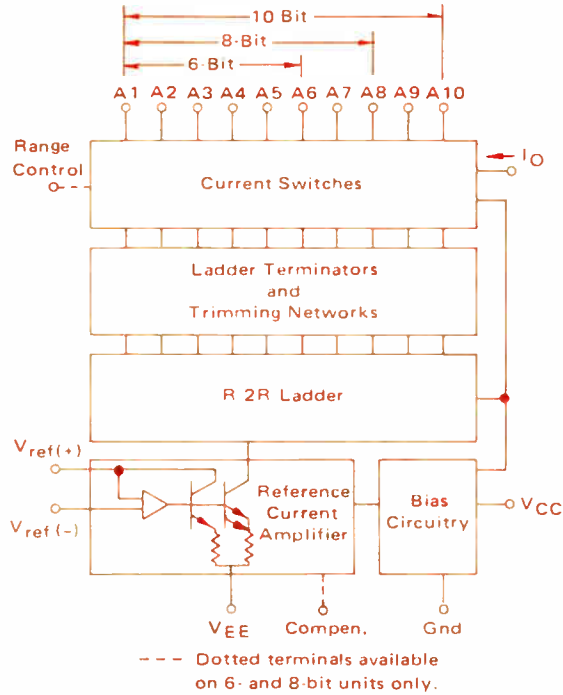

| Device Number | Receiver Input Hysteresis mV Min | Drive Output Voltage @ $I_{OL} = 48 \text{ mA}$; Volts Max | Bus Divider Voltage Volts | t_{PHL} (Driver or Receiver) ns Max |
|---------------|----------------------------------|---|---------------------------|---------------------------------------|
| MC3440P | 400 | 0.4 | 2.6 to 3.75 | 30 |
| MC3441P | 400 | 0.4 | 2.6 to 3.75 | 30 |
| MC3443P | 400 | 0.4 | – | 25(D) 22(R) |
| MC3446P | 400 | 0.4 | 2.5 to 3.7 | 50 |
| MC3448P | 400 | 0.4 | 2.5 to 3.7 | 35 |

A-D/D-A CONVERSION

Low-cost building blocks for construction of D-A/A-D systems. Involves use of advanced technologies such as ion implantation, laser trimming and CMOS

processing where necessary to achieve the required functional capability, operating accuracy and production repeatability.

D-A Converters

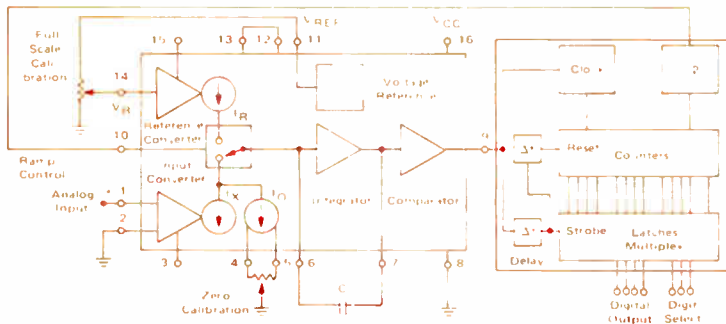

Multiplying D-A converters designed to supply an output current that is a linear product of an analog input reference voltage and a digital input word. Devices for 6-, 8- and 10-bit digital word inputs are available.

| Device Number | Error % Max | P_D @ $V_{EE} = -5V$ mW Max | $t_{Settling}$ ns Typ | I_O @ $V_{Ref} = 2V$ mA | Suffix | Case |

Devices without asterisk: $T_A = 0$ to $70^\circ C$.

A-D Subsystems

2-Chip A-D Converter System Functional Diagram

MC1505/1405 – A-D Converter

MC14435 – Digital Logic

(See Semiconductor Data Library Vol. 5 for data.)

These devices are relatively complex subsystems. The bipolar, dual-ramp A-D converter has up to 4-1/2-digit conversion capability. The CMOS logic subsystem specifically adapts the A-D converter to a 3-1/2-digit DVM function.

MC1505L – $T_A = -55$ to $125^\circ C$ – Case 620
MC1405L – $T_A = 0$ to $70^\circ C$ – Case 620

MC14435EFL/EVL* – $T_A = -55$ to $125^\circ C$ – Case 620
MC14435FL/VL* – $T_A = -40$ to $85^\circ C$ – Case 620
MC14435FP/VP* – $T_A = -40$ to $85^\circ C$ – Case 648

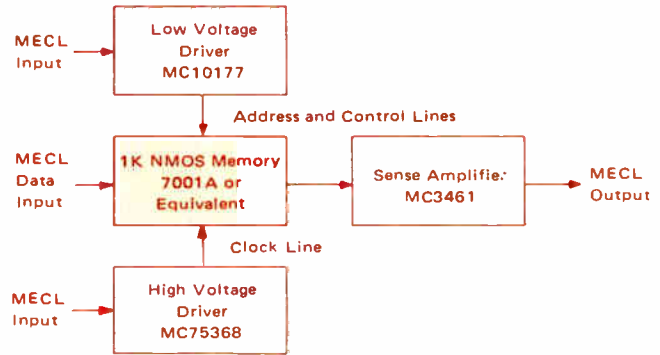

| Linearity Error % Max | Voltage Reference Volts | Temperature Coefficient of Reference %/°C | I_{CC} @ $V_{CC} = 5.0V$ mA Max | P_C (quiescent) @ $V_{DD} = 5.0V$ mW Max | I_{OL} @ $V_{DD} = 5.0V$ (Digit Selects) mA Min | I_{OL} @ $V_{DD} = 5.0V$ (BCD Outputs) mA Min | I_{OL} @ $V_{DD} = 5.0V$ (All Outputs) mA Min |

*MC14435EFL/FL/FP: $V_{DD} = 3.0$ to $18Vdc$
MC14435EVL/VL/VP: $V_{DD} = 3.0$ to $6.0Vdc$

MEMORY INTERFACE

NMOS Memories to MECL Systems

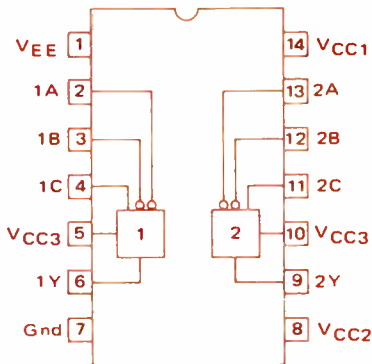

The high-speed capabilities of some NMOS memories (example: 7001A types) make them desirable for use in conjunction with MECL logic for some applications. Yet, the *positive* input requirements of NMOS memories are incompatible with the negative voltage levels characteristic of the MECL family. Hence, level conversion is required—for both input and output matching of the NMOS memory. The interface devices below include driver/translators to feed the memory inputs and a sense amplifier to match the output.

DRIVER/TRANSLATORS

MECL-to-MOS driver/translators convert standard MECL 10,000 input signals to suitable levels for NMOS

MC75368 }
MC75358 } — Dual Clock Line Drivers suitable for driving address, control, and timing inputs.

Maximum Supply Voltage:
MC75368 = 18 V
MC75358 = 22 V

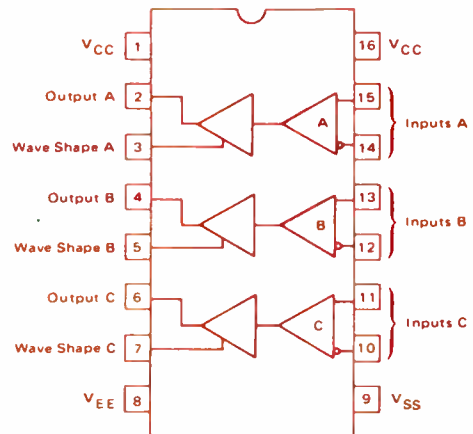

$T_A = 0$ to 70°C

Packages:

L Suffix — Case 632
P Suffix — Case 646

| Device Number | V_{OH} Volts Min @ | I_{OH} mA | V_{OL} Volts Max @ | I_{OL} mA | t_{DHL} ns Max @ | C_L pF |
|---------------|----------------------|-------------|----------------------|-------------|--------------------|----------|
| MC75368 | $V_{CC2} - 0.3$ | 0.1 | 0.3 | 10 | 26 | 300 |
| MC75358 | $V_{CC2} - 0.3$ | 0.1 | 0.3 | 10 | 24 | 390 |
| MC10177 | 4.0 | 15 | 0.5 | 1.0 | 6.0 | 350 |

$T_A = -30$ to 85°C
Package — Case 620

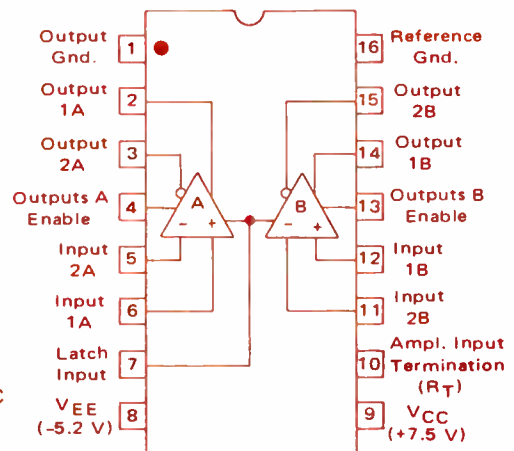

SENSE AMPLIFIER

MC3461L — Dual Sense Amplifier with MECL 10,000-compatible control inputs and complementary, open-emitter outputs. Designed for 7001 and 2105 type NMOS 1K RAMs.

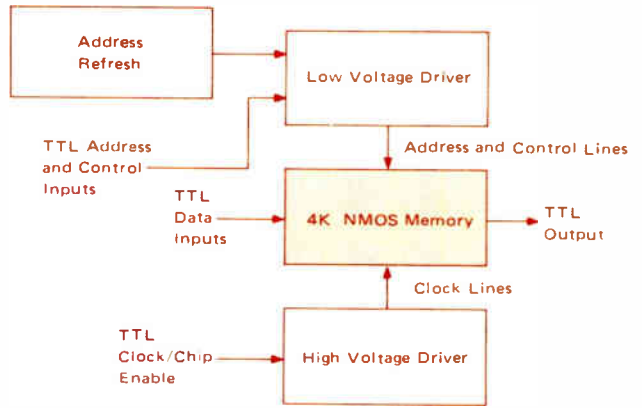

| I_{TH} μA Max | t_{pD} (Amplifier) ns Max | t_{pD} (Enable) ns Max |
|----------------------------|-----------------------------|--------------------------|
| ± 200 | 10 | 5.0 |

$T_A = 0$ to 75°C
Package — Case 620

NMOS Memories to TTL Systems

The highly capacitive loads represented by NMOS memories are, in themselves, incompatible with the drive capabilities of conventional TTL logic circuits. So, also, are some of the voltage levels. The devices shown are used to match TTL capabilities to various types of popular NMOS memories.

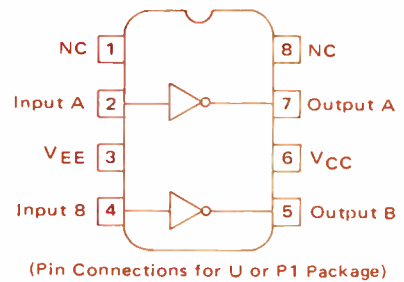

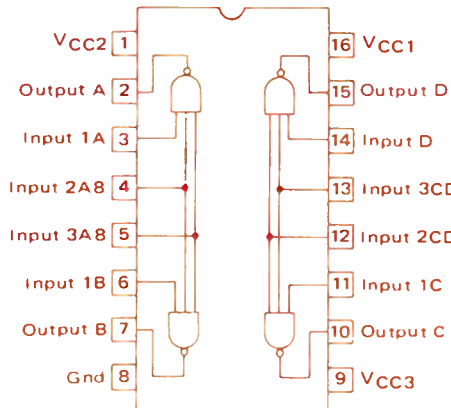

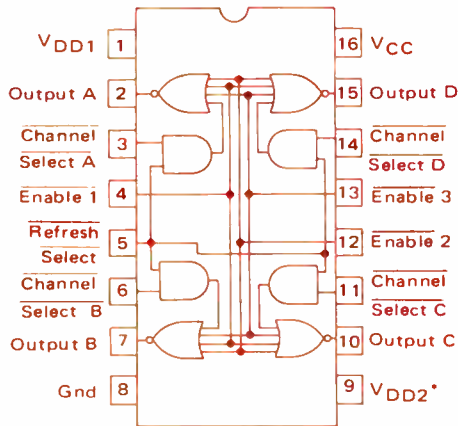

CLOCK AND CHIP ENABLE LINE DRIVERS (High Level)

MC3460 } Quad Clock Drivers
 MC3466 } with Refresh Select
 MC3245 } Logic

MC75365 – Quad Clock Driver or High-Current NAND Gate

MMH0026 } Dual Clock Driver
 MMH0026C }

(Pin Connections for U or P1 Package)

*MC3245 – no connection; V_{DD2} not required.

T_A = 0 to 70°C

Packages:

- L Suffix – Case 620
- P Suffix – Case 648

T_A = 0 to 70°C

Packages:

- L Suffix – Case 620
- P Suffix – Case 648

T_A:

- MMH0026 – -55 to 125°C
- MMH0026C – 0 to 70°C

Packages

- G Suffix – Case 601
- L Suffix – Case 632
- U Suffix – Case 693
- P1 Suffix – Case 626 (For MMH0026C only)

| Device Number | V _{OH} Volts Min @ | I _{OH} mA | V _{OL} Volts Max @ | I _{OL} mA | t _{DHL} ns Max @ | C _L pF | Feature |
|---------------------|-----------------------------|--------------------|-----------------------------|--------------------|---------------------------|-------------------|---|
| MC3460 | V _{DD1} - 1.0 | -2.0 | 0.55 | 40 | 23 | 480 | Specified for use with 4K NMOS dynamic memories. |
| MC3466 | V _{DD1} - 1.3 | -40 | 0.55 | 40 | 24 | 480 | Specified for use with 1K NMOS dynamic memories (e.g., 7001A types). |
| MC3245 | V _{DD} - 0.5 | -1.0 | 0.45 | 5.0 | 32 | 250 | Does not require second high voltage supply. Low input loading. |
| MC75365 | V _{CC2} - 0.3 | -0.1 | 0.3 | 10 | 18 | 200 | Derives V _{CC1} power from TTL 5-V supply, and V _{CC2} and V _{CC3} from V _{SS} and V _{BB} supplies from NMOS memories. |
| MMH0026 MMH0026C | V _C - 1.0 | 0.4 V* | V _{EE} + 1.0 | 2.4 V* | 12 | 1000 | For very high capacitance loads. |

*@ V_I - V_{EE}

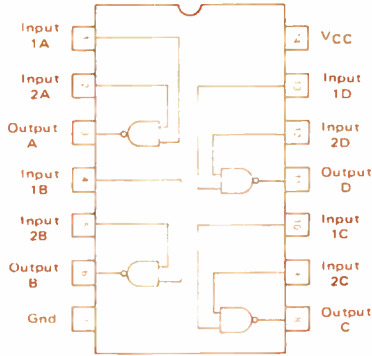

NMOS Memories to TTL Systems (continued)

DATA AND ADDRESS LINE DRIVERS
(Low Level)

MC3459 – Quad Address Line Driver

DS3645 }
DS3675 } – Hex 3-State Latch/
Drivers. Output dump-
ing resistor on DS3675

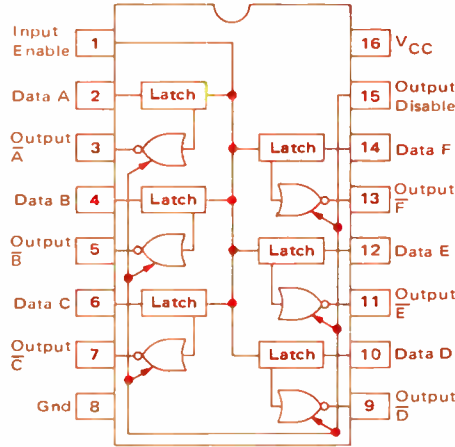

MC3232A – Address Multiplexer
and Refresh Counter

T_A = 0 to 70°C

Packages:

- L Suffix – Case 632
- P Suffix – Case 646

T_A = 0 to 75°C

Packages:

- J Suffix – Case 620
- N Suffix – Case 648

T_A = 0 to 75°C

Packages:

- L Suffix – Case 649
- P Suffix – Case 623

| Device Number | V _{OH} Volts Min | @ | I _{OH} mA | V _{OL} Volts Max | @ | I _{OL} mA | Propagation Delay ns Max | @ | C _L pF | Features |
|---------------|---------------------------|---|--------------------|---------------------------|---|--------------------|--------------------------|---|-------------------|--|
| MC3459 | 2.4 | | -2.0 | 0.7 | | 80 | 26 | | 360 | High fan-out capability. |
| DS3645 | 2.4 | | -1.0 | 0.6 | | 20 | 25 Typ | | 500 | Extremely low input currents for MOS input compatibility. |
| DS3675 | 2.5 | | -1.0 | 0.3 | | 20 | | | | |
| MC3232A | 2.8 | | -1.0 | 0.4 | | 50 | 25 | | 250 | Multiplexes the 12 address bits to the 6 input address pins of 16-pin 4K RAMs. |

MEMORY I/O REGISTERS
(Hex)

B Output

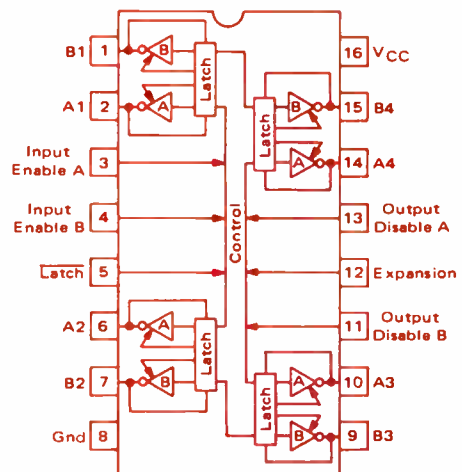

- DS3647 – Inverting, 3-State
- DS3677 – Non-inverting, 3-State
- DS36147 – Inverting, Open Collector
- DS36177 – Non-inverting, Open Collector

These registers, with two I/O ports per bit, can handle bidirectional data, with the direction of data controlled by Input Enables. An Expansion input disables both A and B outputs to permit multiplexing of other registers.

T_A = 0 to 70°C

Packages:

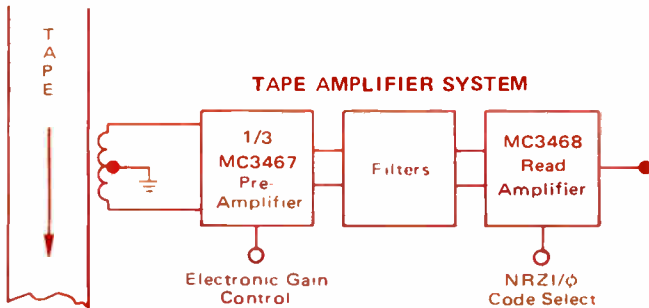

- J Suffix – Case 620
- N Suffix – Case 648

Magnetic Memories to TTL Systems

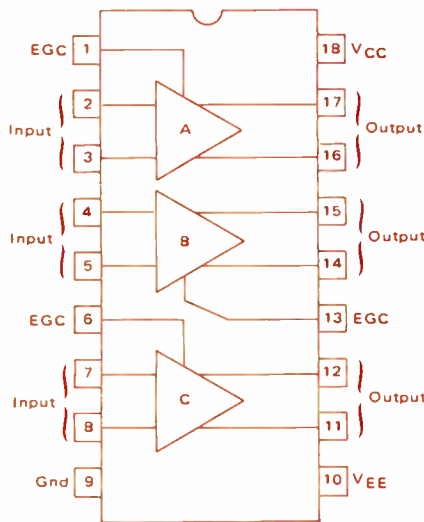

SENSE AMPLIFIERS

... for Magnetic Tape Memories

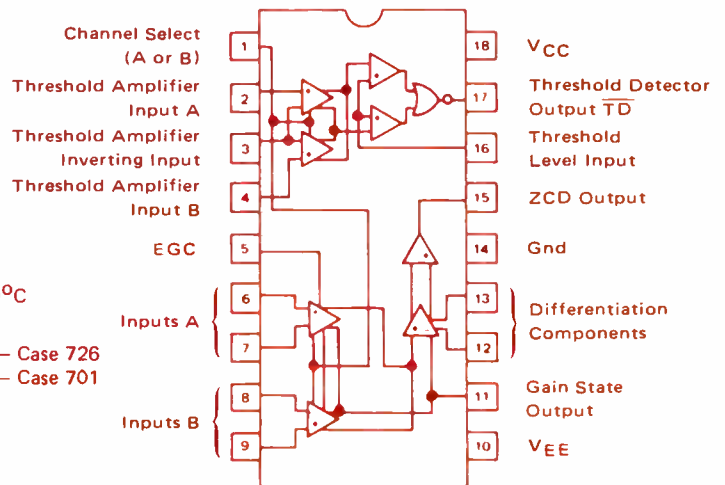

A two-component preamplifier/amplifier combination that provides the interface between magnetic tape heads and digital logic. Suitable for both open reel and cartridge tape systems. Triple preamp has individually adjustable gain controls. LSI Read Amplifier performs peak detection and threshold detection functions, as required for NRZI/phase encoded recording formats.

MC3467 – Triple Preamplifier

Both types:
 $T_A = 0 \text{ to } 70^\circ\text{C}$
 Packages:
 L Suffix – Case 726
 P Suffix – Case 701

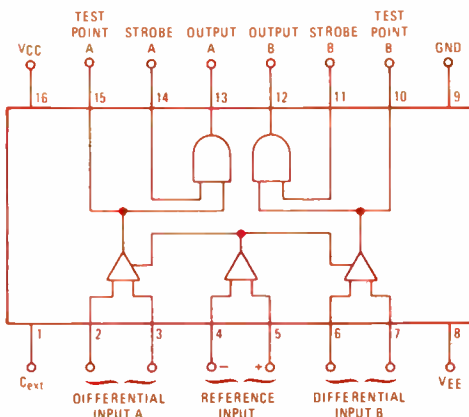

MC3468 – Read Amplifier

... for Core Memories

Feature adjustable threshold, time and amplitude signal discrimination, dual inputs with independent outputs, and a range of options.

Representative Diagram (MC5528/29)*

| ± 25 | 75 | -10 | 25 |

PERIPHERAL INTERFACE

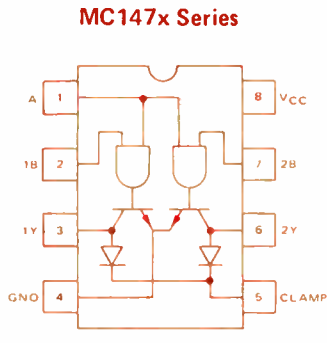

Dual Drivers

... for relays, lamps, and other peripherals requiring more power than generally available from logic gates.

Representative Diagrams

(MC75451/MC75461)

(MC1472)

MC75450 – Similar to MC75451, but with uncommitted output transistors.

All Devices
 $T_A = 0 \text{ to } 70^\circ\text{C}$

Packaging:
 MC75450
 L Suffix – Case 632
 P Suffix – Case 646
 MC75451–54/MC75461–64
 P Suffix – Case 626
 U Suffix – Case 693
 MC1471–74
 P1 Suffix – Case 626
 U Suffix – Case 693

Logic gates vary to provide output shown

| Logic Output (Including Transistor Inversion) | BV _{CER} | | | |
|---|-------------------|-----------|---------|--------------------|
| | 30 V | 30 V | 35 V | 70 V Hi-Z Input |
| AND | MC75451 | SN75451B* | MC75461 | MC1471 # |
| NAND | MC75452 | SN75452B* | MC75462 | MC1472 |
| OR | MC75453 | SN75453B* | MC75463 | MC1473 # |
| NOR | MC75454 | SN75454B* | MC75464 | MC1474 # |

*Same as equivalent MC types, but with guaranteed switching limits.
 #To be introduced.

Driver Arrays

... Seven Darlington transistors with output clamp diodes.

| Device Number | Application | Input Element |
|---------------|-----------------|---|
| MC1411 | General Purpose | Basic |
| MC1412 | 14–25 V PMOS | Zener and Series 10.5 k Ω resistor |
| MC1413 | 5 V CMOS or TTL | Series 2.7 k Ω resistor |
| MC1416 | 8–18 V MOS | Series 10.5 k Ω resistor |

All Types:
 $V_{Max} = 50 \text{ V}$
 $I_{Max} = 500 \text{ mA}$
 $T_A = 0 \text{ to } 85^\circ\text{C}$

Packages:
 L Suffix – Case 620
 P Suffix – Case 648

Dual Receiver

MC75140P1 – Dual single-ended receiver with common strobe and reference inputs for maximizing noise immunity. Useful for bus-organized (party line) TTL systems.

| V_{TH} | V_{Ref} | $t_{PLH(L)}$ |
|---------------------|--------------|--------------|
| $\pm 100 \text{ V}$ | 1.5 to 3.5 V | 35 ns |

$T_A = 0 \text{ to } 70^\circ\text{C}$
 Package – Case 626

NUMERIC DISPLAY INTERFACE

... for mating multiplexed LED or gas discharge numeric displays to MOS or TTL logic systems.

LED Drivers for Common-Cathode Displays

MC75491 – Quad segment driver

MC75492 – Hex digit driver

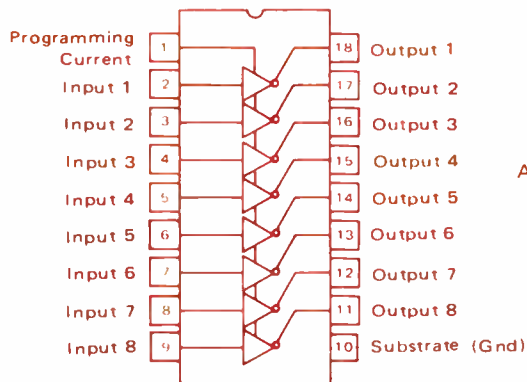

Both Devices:
 $T_A = 0$ to 70°C
 Packages:
 L Suffix – Case 632
 P Suffix – Case 646

| Device Number | I_I @ $V_I = 10\text{ V}$ mA Max | V_{OL} Volts Max | @ I_{OL} mA | V_{SS} Volts Max |
|---------------|------------------------------------|--------------------|---------------|--------------------|
| MC75491 | 3.3 | 1.2 | 250 | 10 |
| MC75492 | 3.3 | 1.2 | 50 | 10 |

Gas Discharge Drivers

MC3491 – Eight segment cathode drivers with programmable current.
 MC3492

Package: P Suffix – Case 701

MC3490 – High Level
 MC3494 – Low Level
 Seven digit anode drivers

* Inverter on MC3494 only.
 Package: P Suffix – Case 648

| Device Number | Output ON Current mA Max | Breakdown Voltage Volts Min | Current Deviation (All 8 Outputs) % Max | Output Voltage Compliance Range Volts |
|---------------|--------------------------|-----------------------------|---|---------------------------------------|
| MC3491 | 1.85 | 80 | 10 | 5.0 to 50 |
| MC3492 | 5.25 | 80 | 10 | 5.0 to 50 |

| Device Number | Breakdown Voltage Volts Min | Input Voltage (OFF-State) Volts | Input Voltage (ON-State) Volts | Input Current μA Max |
|---------------|-----------------------------|---------------------------------|--------------------------------|---------------------------------|
| MC3490 | 48 | -5.0 Min | -2.0 Max | 450 |
| MC3494 | 48 | -2.0 Max | -5.0 Min | -350 |

VOLTAGE COMPARATORS

General Purpose Comparators

... for detecting the polarity relationship between two analog levels and giving a corresponding TTL output.

MC1710 – $T_A = -55$ to 125°C

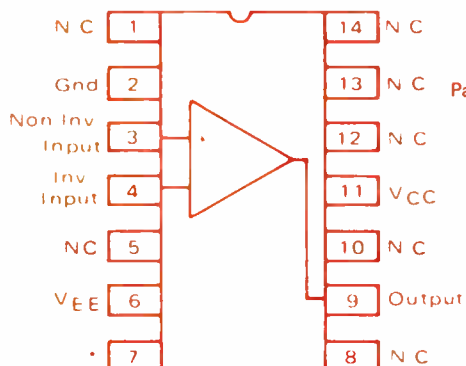

MC1710C – $T_A = 0$ to 70°C

Single comparators

MC1711 – $T_A = -55$ to 125°C

MC1711C – $T_A = 0$ to 70°C

Dual comparators with strobes and wire-ORed outputs

Packages:

G Suffix – Case 601

F Suffix – Case 606

L Suffix – Case 632

P Suffix – Case 646 (for MC1710C, MC1711C only)

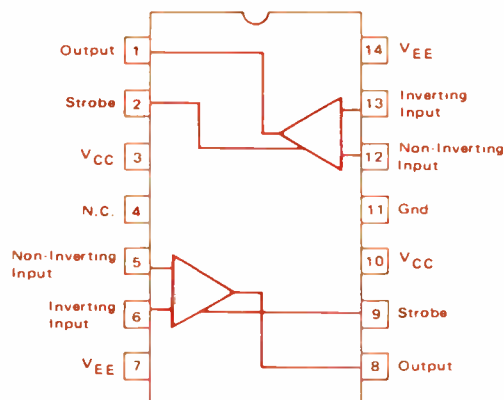

*Connected to pin 6 via the substrate on some plastic units.

*Connected to pin 4 via the substrate on some plastic units.

MC1514 – $T_A = -55$ to 125°C

MC1414 – $T_A = 0$ to 70°C

Dual comparators with strobes.

Packages:

F Suffix – Case 607

L Suffix – Case 632

P Suffix – Case 646 (MC1414 only)

| Device Number | V_{IO} mV Max | I_{IB} μA Max | AV_{OL} V/V Min |
|---------------|-----------------|----------------------------|-------------------|
| MC1710C | 5.0 | 25 | 1000 |
| MC1710 | 2.0 | 20 | 1250 |
| MC1711C | 5.0 | 100 | 700 |
| MC1711 | 3.5 | 75 | 700 |
| MC1514 | 2.0 | 20 | 1250 |
| MC1414 | 5.0 | 25 | 1000 |

Precision Comparators

... featuring low input loading, high voltage gain, and a choice of either dual or single positive power supply operation.

- MLM111 – $T_A = -55$ to 125°C
- MLM211 – $T_A = -25$ to 85°C
- MLM311 – $T_A = 0$ to 70°C

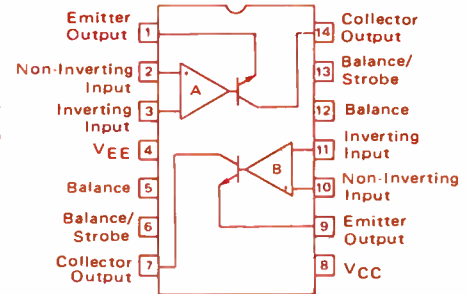

Single comparators; high gain, high input impedance; strobe and balance inputs provided.

- Packages:
- G Suffix – Case 601
 - F Suffix – Case 606
 - L Suffix – Case 632
 - P1 Suffix – Case 626 (MLM311 only)

MC3411 – $T_A = 0$ to 70°C
Dual 311-type comparator.

- Packages:
- L Suffix – Case 632
 - P Suffix – Case 646

| Device Number | V_{IO} mV Max | I_{IB} nA Max | V_{OL} @ $I_{OL} = 50$ mA Volts Max |
|---------------|-----------------|-----------------|---------------------------------------|
| MLM111 | 3.0 | 100 | 1.5 |
| MLM211 | 3.0 | 100 | 1.5 |
| MLM311 | 7.5 | 250 | 1.5 |
| MC3411 | 7.5 | 250 | 1.5 |

Quad Comparators

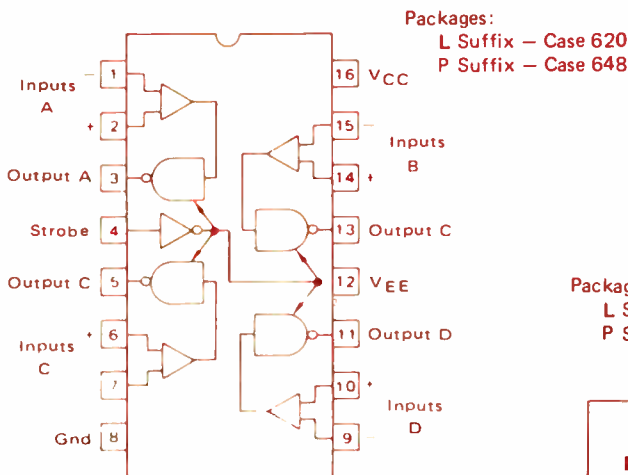

... for applications requiring multiple comparators.

MC3430 } – High-speed quad comparators with three-state Enable common to all four devices; ± 5 volt supply; $T_A = 0$ to 70°C .

MC3432 } – Quad comparators with open collector outputs, common strobe input; ± 5 volt supply; $T_A = 0$ to 70°C .

- MLM139 } – $T_A = -55$ to 125°C
- MLM139A }
- MC3302 } – $T_A = -40$ to 85°C
- MLM239 }
- MLM239A }
- MLM339 } – $T_A = 0$ to 70°C
- MLM339A }

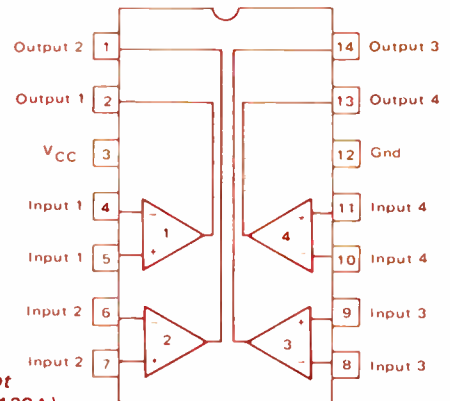

Single supply voltage comparators.

- Packages:
- L Suffix – Case 620
 - P Suffix – Case 648

| Device Number | V_{IS} mV Max | I_{IB} μA Max | t_{PHL} ns Max |
|---------------|-----------------|----------------------------|------------------|
| MC3430 | ± 6.0 | 20 | 45 |
| MC3431 | ± 10 | 20 | 45 |
| MC3432 | ± 6.0 | 20 | 50 |
| MC3433 | ± 10 | 20 | 50 |

- Packages:
- L Suffix – Case 632
 - P Suffix – Case 646 (For all devices except MLM139, MLM139A)

| Device Number | V_{IO} @ 25°C mV Max | I_{IB} @ 25°C nA Max | I_{sink} @ $V_{OL} = 500$ mV mA Min | V_{OL} @ $I_{OL} = 2.0$ mA* @ $I_{OL} = 4.0$ mA mV Max |
|---------------|--------------------------------------|--------------------------------------|---------------------------------------|--|
| MC3302 | 20 | 1000 | – | 400* |
| MLM139 | 5.0 | 100 | 6.0 | 500 |

| MLM339A | 2.0 | 250 | 6.0 | 500 |

COMMUNICATION INTERFACE (Telephony)

Crosspoint Switch

MC3416 – Low-cost solid-state crosspoint switch offers important advantages in modern telephone exchanges employing space-division switching. Features 4 x 4 two-wire monolithic structure for PABX applications. Select inputs are both CMOS and TTL compatible.

$$T_A = 0 \text{ to } 70^\circ\text{C}$$

Packages:

P Suffix – Case 649

L Suffix – Case 623

| r_{off} @ $V_{AK} = 10 \text{ V}$ M Ω Min | r_{on} @ $I_{AK} = 20 \text{ mA}$ Ohms Max | BV_{AK} BV_{KA} Volts Min | V_{AK} @ $I_{AK} = 20 \text{ mA}$ Volts Max |
|--|--|-------------------------------------|---|
| 100 | 10 | 25 | 1.1 |

Voice Encoding/ Decoding

Simplified voice encoding/decoding using continuous Variable Slope Delta Modulator (CVSD) technique.

MC3417 – 3-bit algorithm; for military secure communication applications.

MC3418 – 4-bit algorithm; telephone quality.

$$T_A = 0 \text{ to } 70^\circ\text{C}^*$$

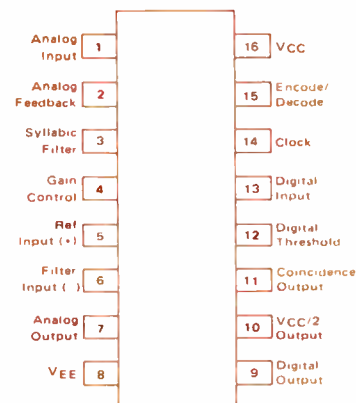

Packages:

L Suffix – Case 620

P Suffix – Case 648

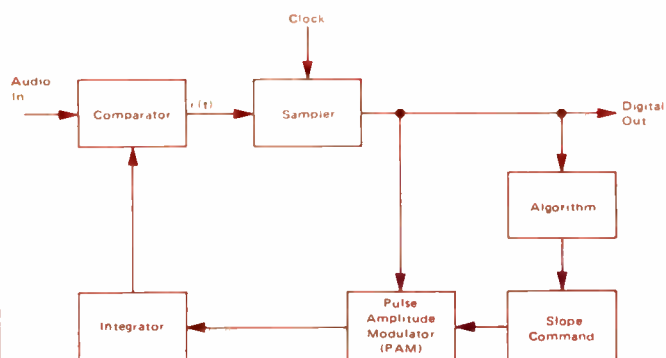

*Military temperature range devices (MC3517/18) to be offered in early 1977.

| Device Number | Sample Rate Samples/s Typ | Total Loop Offset Voltage mV Max | t_{PD} , Clock Trigger to Output μs Max |

MOTOROLA

LINEAR INTEGRATED CIRCUITS

Starting with the now all pervasive operational amplifier, linear integrated circuit technology currently influences the design and architecture of equipment for all major markets. Amplifiers? Of course! But that's only a starting point. Linear circuits have taken the erstwhile expensive and exclusive voltage regulator and turned it into a commodity item for all electronic equipment. They have reduced the myriad of discrete parts formerly involved in consumer products to just a handful of IC packages and they've brought electronic capabilities a giant step closer to widespread use by mass markets.

TABLE OF CONTENTS

| | Page |
|---|------|
| Operational Amplifiers | 90 |
| Voltage Regulators | 94 |
| High Frequency Amplifiers | 97 |
| Special-Purpose Industrial Circuits | 98 |
| Circuits for Consumer Applications | 100 |

OPERATIONAL AMPLIFIERS

Motorola offers a broad line of operational amplifiers to meet a wide range of usages. From low-cost industry-standard types to high precision circuits, the span encompasses a large range of performance capabilities. These linear integrated circuits are available as single, dual, and quad monolithic devices in a variety of package styles as well as standard chips.

The following tables provide the major technical specifications normally associated with Operational Amplifiers. In addition, the Description column highlights any unique feature or application for each particular device. To simplify initial selection further, the devices in each table are listed in ascending order of price. This permits basic selection from among several devices whose specifications may be suitable for the intended applications.

Single Operational Amplifiers

NONCOMPENSATED

VOLTAGE REGULATORS

Fixed Output Voltage Regulators

Low cost, monolithic circuits for positive and/or negative regulation at currents from 100 mA to 3 A. These circuits require no external add-on component, although an input capacitor should be used if the regulator is located an appreciable distance from the power supply filter, and an output capacitor could improve transient response. They are ideal for on-card regulation of subsystems, affording possible economic advantages and performance improvement in applications where total system regulation is not required.

Most devices are available in metal and plastic packages. All employ internal current limiting, thermal shutdown and safe-area compensation – making them essentially blow-out proof. All are designed to operate over a 0°C to 150°C junction temperature range, except *T_J = -55°C to +150°C.

FIXED VOLTAGE, 3-TERMINAL REGULATORS FOR POSITIVE OR NEGATIVE POLARITY POWER SUPPLIES.

†Output Voltage Tolerance for Worst Case

Variable Output Voltage Regulators

The regulators in the following tables can be tailored for any specific output voltage within the indicated ranges through the use of external resistors. The indicated output current is available directly from the device. Increased output current can usually be obtained through the use of external current – boosting circuits. All have internal provisions for current limiting, or are internally protected against excessive thermal or SOA overloads.

Switching Regulators

Used as the control circuit in PWM, push-pull, bridge and series type switchmode supplies. The device includes the reference, oscillator, pulse-width modulator, phase splitter and output sections. Frequency and duty cycle are independently adjustable.

HIGH FREQUENCY AMPLIFIERS

A variety of high-frequency circuits with features ranging from low-cost simplicity to multi-function versatility marks Motorola's line of integrated RF/IF amplifiers. Devices described here are intended for industrial and communications applications. For devices especially dedicated to consumer products, i.e., TV and entertainment radio, see page 100.

NON-AGC Amplifiers

SE/NE592 – Differential Two Stage Video Amplifier

A monolithic, two state differential output, wide-band video amplifier. It offers fixed gains of 100 and 400 without external components and adjustable gains from 400 to 0 with one external resistor. The input stage has been designed so that with the addition of a few external reactive elements between the gain select terminals, the circuit can function as a high pass, low pass, or band pass filter. This feature makes the circuit ideal for use as a video or pulse amplifier in communications, magnetic memories, display and video recorder systems.

MC1733/MC1733C – Video Amplifier

Differential input and output amplifier provides three fixed gain options with bandwidth to 120 MHz. External resistor permits any gain setting from 10 to 400 v/v. Extremely fast rise time (2.5 ns typ) and propagation delay time (3.6 ns typ) makes this unit particularly useful as pulse amplifier in tape, drum, or disc memory read applications.

MC1552/MC1553 – Low Distortion Amplifier

A high performance amplifier with internal series feedback for stable voltage gain and low distortion. Temperature compensation stabilizes operating point. Has selectable gain option and well characterized data that permits accurate response shaping. Useful for critical applications such as wideband linear amplifiers or fast-rise pulse amplifiers.

MC1510/MC1410 – General-Purpose Differential Amplifier

Differential amplifier with flat response to 40 MHz. Provides excellent performance and simple design for most video and communications purposes.

AGC Amplifiers

MC1550 – Low Cost Building Block

Single-stage cascade connected amplifier with delayed AGC characteristics, for operation at frequencies to 100 MHz. Has typical power gain of 25 dB @ 60 MHz.

MC1545/MC1445 – Gated 2-Channel Input

Differential input and output amplifier with gated 2-channel input for a wide variety of switching purposes. Typical 75 MHz bandwidth makes it suitable for high-frequency applications such as video switching, FSK circuits, multiplexers, etc. Gating circuit is useful for AGC control.

MC1590 – Wide-Band General Purpose

Has differential inputs and outputs with unneutralized power gain as high as 35 dB typical at 100 MHz in tuned amplifier service. Effective AGC voltage range from 5 to 7 volts for a 30 dB gain reduction.

SPECIAL PURPOSE CIRCUITS

The linear-integrated-circuits listed in this section were developed by Motorola for the system design engineer to fill special-purpose requirements. Temperature ranges and package availability are tailored to provide price/performance versatility.

Linear Four-Quadrant Multipliers

MC1594/1494

This device is designed for use where the output voltage is a linear product of two input voltages. Typical applications include: multiply, divide, square root, mean square, phase detector, frequency doubler, balanced modulator/demodulator, electronic gain control.

The MC1594/MC1494 is a variable transconductance multiplier with internal level-shift circuitry and voltage regulator. Scale factor, input offsets and output offset are completely adjustable with the use of four external potentiometers. Two complementary regulated voltages are provided to simplify offset adjustment and improve power-supply rejection.

MC1595/MC1495

Similar to the MC1594/1494, but without internal level shift and voltage regulator circuits.

Balanced Modulator-Demodulator

MC1596/MC1496

Designed for use where the output voltage is a product of an input voltage (signal) and a switching function (carrier). Typical applications include suppressed carrier and amplitude modulation, synchronous detection, FM detection, phase detection and chopper applications.

Ground Fault Interrupter Circuit

MC3426

(Latching)

This circuit provides ground fault and grounded neutral protection for 120 VAC, 15 and 20 Amp. lines. Useful in wall socket and circuit breaker applications.

- Trip Times in Accordance with U.L.
- High Noise Immunity
- Resistance to False Tripping
- Minimum Trip Leakage Current- $5 \pm \text{mA}$
- Trips for Neutral Gnd. Resistance > 2

Timing Circuits

MC1555/MC1455/MC1422

These devices are highly stable timing circuits capable of producing accurate time delays or oscillation. Additional terminals are provided for triggering or resetting if desired. In the time delay mode of operation, the time is precisely controlled by one external resistor and capacitor. For a stable operation as an oscillator, the free running frequency and the duty cycle are both accurately controlled with two external resistors and one capacitor. The circuit may be triggered and reset on falling waveforms, and the output structure can source or sink up to 200 mA or drive MTTL circuits. Timing from Microseconds through Hours. The MC1422 has variable threshold level, adjustable externally.

| | Timing Error (typ) |
|--------|--------------------|
| MC1555 | 0.5% |
| MC1455 | 1.0% |
| MC1422 | 1.0% |

MC3556/MC3456

Dual Version of the MC1555/MC1455

Overvoltage Protection Circuit

MC3523/MC3423

Protects sensitive electronic circuitry from over voltage conditions by short circuiting the supply current when an overvoltage occurs. This causes circuit breaker to trip or fuse to open.

- Adjustable Threshold Voltage
- Adjustable Energy Threshold
- Remote Activation
- Activation Indication

Power Control Circuits

MC3370

Electronic switch for triac triggering applications. Features zero-crossing detector to eliminate RFI, differential input with dual sensor inputs, input open and short protection, and built-in regulator permitting AC line operation.

Low Frequency Power Amplifier

MC1554/MC1454

One-watt power amplifier for single or split supply operation. Typical voltage gain of 10, 18, or 36 V/V with 0.4% THD.

Monolithic Dual OP Amp and Dual Comparator

MC3505/MC3405

This device contains two differential input operational amplifiers and two comparators each set capable of single supply operation. This operational amplifier-comparator circuit will find its applications as a general purpose product for automotive circuits and as an industrial "building block".

- Op Amp Equivalent in Performance to MC3403
- Comparator Similar in Performance to MLM339
- Op Amps are Internally Frequency Compensated
- Supply Operation 3.0 Volts to 36.0 Volts
- Dual Supply Operation also Available

CIRCUITS FOR CONSUMER APPLICATIONS

... reflecting Motorola's continuing commitment to semiconductor products necessary for consumer system designs. This tabulation is arranged to simplify first-order selection of consumer

integrated circuit devices that satisfy the primary functions for Television, Audio, Radio, Citizens Band, Automotive and Organ applications.

Television Circuits

SOUND

| Function | Features | Case | Type |
|---|--|----------|----------|
| Sound IF, Detector, Limiter, Audio Preamplifier | 80 μ V, 3 dB Limiting Sensitivity, 3.5 V (RMS) Output, Sufficient for Single Transistor Output Stage | 646, 647 | MC1351 |
| Sound IF Detector | Interchangeable with ULN2111A | 646, 647 | MC1357 |
| Sound IF Detector, dc Volume Control, Preamplifier | Excellent AMR, Interchangeable with CA3065 | 646, 647 | MC1358 |
| Sound IF, Low Pass Filter, Detector, dc Volume Control, Preamplifier, Power Amplifier | Complete TV Sound System; 100 μ V, 3 dB Limiting Sensitivity; 4 Watts Output; $V_{CC} = 24$ V; $R_L = 16$ Ω | 722A | TDA1190Z |

VIDEO

| | | | |
|---|---|----------|----------|
| 1st and 2nd Video IF Amplifier | IF Gain @ 45 MHz = 60 dB typ, AGC Range = 70 dB min | 626 | MC1349 |
| | IF Gain @ 45 MHz = 46 dB typ, AGC Range = 60 dB min | 626 | MC1350 |
| 1st and 2nd Video IF, AGC Keyer and Amplifier | IF Gain @ 45 MHz = 53 dB typ, AGC Range = 65 dB min, "Forward AGC" Provided for Tuner | 646, 647 | MC1352 |
| 3rd IF, Video Detector, Video Buffer, and AFC Buffer | Low-Level Detection, Low Harmonic Generation, Zero Signal dc Output Voltage of 7.0 to 8.2 V | 626 | MC1330A1 |
| | Same as MC1330A1 except zero signal dc output voltage of 7.8 to 9.0 V | 626 | MC1330A2 |
| 3rd IF, Video Detector, Sound IF Detector, and Sync Separator | Low-Level Detection, Separate Sound Detector, Differential Inputs | 646 | MC1331 |
| AGC Keyer, AGC Amplifier, Noise Gate, Sync Separator | High-Quality Noise Gate, One IF AGC Output and Two Tuner AGC Outputs, Adjustable AGC Delay | 646 | MC1344 |
| Automatic Fine Tuning | High Gain AFT System, Interchangeable with CA3064 | 646 | MC1364 |

CHROMA

| | | | |
|---|---|----------|--------|
| Chroma IF Amplifier and Subcarrier System | Includes Complete Chroma IF, AGC, dc Gain and Tint Controls Injection Locked Oscillator. Low Peripheral Parts Count | 646 | MC1398 |
| Chroma IF Amplifier and Subcarrier System (PLL) | Includes Complete Chroma IF, AGC, dc Chroma and Hue Controls, Phase-Locked Loop (PLL) Oscillator, Color Killer Threshold Adjustment | 648 | MC1399 |
| Dual Chroma Demodulators | Dual Doubly Balanced Demodulator with RGB Matrix and Chroma Driver Stages | 646 | MC1324 |
| | Dual Doubly Balanced Demodulator with RGB Matrix and PAL Switch | 646, 647 | MC1327 |
| Triple Chroma Demodulator | Triple Doubly Balanced Demodulator with Adjustable Output Matrix, Contains Three Independent Demodulators | 648 | MC1323 |

DEFLECTION

| | | | |
|----------------------|---|-----|--------|
| Horizontal Processor | Includes Linear Balanced Phase Detector, Oscillator and Pre-driver. Adjustable dc Loop Gain | 626 | MC1391 |
| | Same as MC1391 except designed to accept negative sawtooth sync pulse | 626 | MC1394 |
| Vertical Processor | Includes Oscillator and Complementary Driver, Low Thermal Drift, Retrace Pulse for Effective Blanking | 648 | MC1393 |

MOTOROLA

COMPONENTS FOR PHASE-LOCKED LOOP APPLICATIONS

Motorola offers the designer a choice of specially designed integrated circuits for performing phase-locked loop functions: phase detection, frequency division, filtering, and voltage-controlled signal generation. In addition, the choice of circuits permits the designer to select CMOS circuits for low-power applications, TTL circuits for intermediate speed, or ECL circuits where high speed is required. The MC12000 ECL series circuits will operate at either +5.0 V or -5.2 V, and translators are included where needed so that all functions are TTL compatible.

CONSOLIDATED FUNCTIONS

CMOS Components . . . for very low power consumption

PHASE COMPARATORS/VCO

MC14046B — for general-purpose, digital applications at frequencies to 1.4 MHz.

ORDERING INFORMATION

- VCO Frequency = 1.4 MHz typ @ 10 V
- VCO Frequency Drift with Temperature = 0.04%/°C typ @ 10 V
- VCO Linearity = 1% typ
- Quiescent Current = 5 nA/pkg @ 5 V
- Low Dynamic Power Dissipation — 70 μW typ @ f₀ = 10 kHz, V_{DD} = 5 V, R₁ = 1 MΩ, R₂ = ∞, R_{SF} = ∞
- Buffered Outputs Compatible with MHTL and Low-Power TTL

PHASE COMPARATOR/PROGRAMMABLE COUNTERS

MC14568B — for use with external VCO for PLL applications.

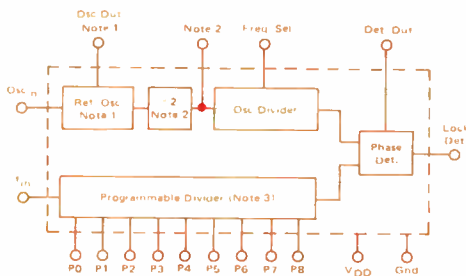

ORDERING INFORMATION — Same as above

- Two Internal Programmable Counters
 - Divide-by-4, 16, 64 or 100
 - Divide-by-N 4-bit binary
- Pulse Repetition Frequency to 10 MHz
- Quiescent Current = 5 nA/pkg @ 5 V
- Counters Internally Cascadable, or May Be Cascaded with External Counters for Greater Range

FREQUENCY SYNTHESIZERS

MC145104, MC145106, MC145107 } — for CB and FM transceivers
 MC145109, MC145112

ORDERING INFORMATION —
 16 or 18 Pin Plastic Package
 (P Suffix)

Note 1 MC145107, MC145109 have amplifier, no output
 Other types have Reference Oscillator, with output
 Note 2 MC145106, MC145107 have 2 stage with output
 MC145112 has 2 stage, no output
 Other types have 2 omitted
 Note 3 MC145104, MC145107 have 2⁹ 1 Divider
 Other types have 2⁹ 1 Divider.

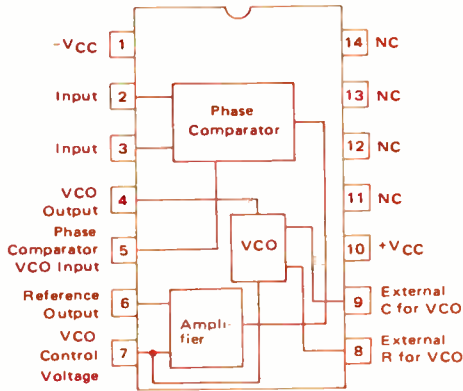

- Voltage Range = 4.5 to 12 V
- 10.24 MHz Oscillator On-Chip
 (Except MC145107 and MC145109 Require External Reference)
- 5.12 MHz Output
- Programmable Binary Inputs with On-Chip Pulldown Resistors
- Selectable Reference Divider with On-Chip Pullup Resistor
 2¹⁰ or 2¹¹ for MC145104, 5109
 2⁹ or 2¹⁰ for MC145106, 5112

Linear PLL

MLM565C – for general-purpose analog applications at frequencies to 500 kHz.

P SUFFIX
PLASTIC PACKAGE
CASE 646

- Stable Center Frequency – 200 ppm/°C typ
- Flexible Power Supply Range – ±5 to ±12 Volts with Small Frequency Drift – 100 ppm/% typ
- Low Total Harmonic Distortion of Demodulator Output – 1.5% max
- Linear Triangle Wave Output – 0.5% typ
- TTL, DTL Compatible Inputs and Outputs
- Adjustable Hold In Range – ±1% to >±60%.

BASIC FUNCTIONS

The following functions are given in order of decreasing frequency within each category.

| Function | Family | Frequency MHz typ | Power Dissipation mW typ/pkg | Type | | Case ^① |
|--|----------------|-------------------|------------------------------|-------------------|--------------------|---------------------------|
| | | | | -55 to +125°C | 0 to +75°C | |
| OSCILLATORS | | | | | | |
| Crystal Oscillator | MECL | 2.0 to 20 | 210 | MC12561 | MC12061 | 620, 648 |
| Crystal Oscillator | MECL | 0.1 to 2.0 | 175 | MC12560 | MC12060 | 620, 648 |
| Voltage-Controlled Oscillator | MECL | 225 | 150 | MC1648M | MC1648# | 607, 632, 646 |
| Voltage-Controlled Multivibrator | MECL | 150 | 150 | – | MC1658# | 620, 648 |
| Dual Voltage-Controlled Multivibrator | MTTL | 30 | 150 | MC4324 | MC4024 | 607, 632, 646 |

ONE-STOP SHOPPING FOR SEMICONDUCTORS

There's a lot to be said for "supermarket" shopping. Availability . . . Price . . . Variety . . . Quality! And for discrete semiconductors, Motorola has emerged as the industry's most complete one-stop product source. From Amplifier transistors to Zeners, they're all categorized in the following section—and with a large enough selection of specifications to meet almost any end-use application.

But don't be misled by the limited listings. They represent only the most popular off-the-shelf types—devices that meet the general cost and performance requirements for the majority of circuits. Beyond these are the hosts of "specials" that are computer-selectable to a customer's unique electrical requirements from the large production runs of the standard products.

Between standards and specials, there's hardly any product application that can't be satisfied—expeditiously and economically—with Motorola discrete semiconductors, and a pervasive network of factory sales offices and distributors are staffed to provide efficient customer service.

May we help you?

SILICON POWER TRANSISTORS

Motorola's extensive power transistor manufacturing facility encompasses a wide variety of technologies (epi-base, single-, double-, and triple-diffusion, etc.), packages, and geometric configurations to best meet the selective needs of the expanding applications. Devices with several thousand different specifications tables are being manufactured to specific order. Of these, some four hundred (+) devices have been selected as standard products for off-the-shelf delivery. These "standards", representing the most cost-effective devices for the vast majority of end uses, are described on the following pages.

TABLE OF CONTENTS

| | Page |
|---|------|
| Power Transistor Packages | 114 |
| Standard Power Transistors, in order of increasing continuous collector current | 115 |
| Power Transistors arranged by package | 120 |
| Power Darlington | 124 |
| Power Switching Transistors — Below 200 V | 125 |
| SWITCHMODE Power Transistors — Above 200 V | 126 |
| Military Specified Power Transistors | 127 |

Motorola Power Transistor Packages

Motorola provides Silicon Power Transistors encased in several packages. Each package has advantages and trade-offs; the choice is left to the user.

Metal cases are hermetic and capable of operating at 200°C junction. These include the TO-5 and TO-39, intended for lead mounting with power dissipation less than 5 watts at 25°C ambient. Press-on heat sinks will allow higher power dissipation.

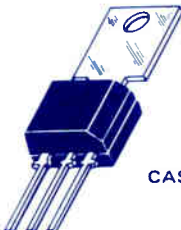

For high power dissipation, packages designed expressly for use with heat sinks are available. These include the TO-66 for 20 to 100 watts and the TO-3 for 100 to 300 watts. Both of these are easily mounted on a heat sink and may be used with sockets, wire soldered, or PC board connection. Metal stud devices need only a single hole for mounting to a heat sink but must be solder wired to make connection at the terminals. Various stud packages are used in the industry with power dissipation ranging from 10 to greater than 300 watts. Motorola provides the TO-59 at 60 watts for standard devices but has capability in TO-61 and TO-63.

Plastic encapsulated power transistors offer extremely high package density per watt of power dissipation despite the restriction of 150°C maximum junction temperature. In addition to compactness, these have a low silhouette and all three terminals are brought out in leads so that electrical connection is easily made via a PC board or socket. Present day Plastic Power Transistors use silicon dioxide or special glass passivation on the die so these meet most of the "metal can" hermeticity tests.

Motorola produces several plastic encapsulated power transistor lines. Included in this selector guide are the Case 152 and TO-202 (Case 306) for up to 2 watts free air dissipation or 10 watts dissipation with heat sinking; TO-126* (Case 77) which ranges from 15 to 49 watts P_D ; the TO-127 (Case 90) for 75 to 100 watts; the TO-220 for 40 to 100 watts. Motorola also has a "Case 199" which is similar to the TO-220 and has the same power handling range; this package eventually will be phased out, and is not included in this guide.

*There are two lead options with this case. The base and emitter leads on some lines are reversed from the majority of lines. These so called "reverse" leads are compatible with the TO-220.

Note: Mounting Hardware is available for all packages.

| TO-3 | | Modified TO-3 | | |

Motorola Standard Silicon Power Transistors

Comprehensive listing of over 500 Motorola standard silicon power transistors arranged in ascending order of maximum continuous collector current, I_C Cont, and open base sustaining voltage, $V_{CEO(sus)}$. Also listed are current gain (h_{FE}), turn off switching times (t_f , t_s or t_{off}), f_T , power dissipation, and package type (both JEDEC and Motorola). Complementary pairs are grouped together.

| I_C Cont Amps Max | V_{CEO} (sus) Volts Min | Device Type | | h_{FE} Min/Max | I_C @ Amp | Resistive Switching | | | f_T MHz Min | P_D (Case) Watts @ 25°C | Case JEDEC/MOT | |

Motorola Standard Silicon Power Transistors Arranged by Package

TO-3

CASE 11-01 – 40-mil pins

MODIFIED TO-3

CASE 197-01 – 60-mil pins

For single side mounting in power range of 87.5 to 300 watts,
at 25°C.

Devices shown have 40-mil pins unless otherwise noted.

Motorola Power Darlington

Power Darlington provide high gain, high input impedance and reduced component count, with subsequent space savings. Devices are listed in ascending order of maximum continuous collector current, I_C Cont, and open base sustaining voltage, $V_{CEO(sus)}$. Complementary types are grouped together.

| I_C Cont Amps Max | V_{CEO} (sus) Volts Min | Device Type | | h_{FE} Min/Max | I_C @ Amp | Resistive Switching | | | $ h_{fe} $ @ 1 MHz Min | P_D (Case) Watts @ 25°C | Case JEDEC/MOT | |

Motorola SWITCHMODE Power Transistors

$$BV_{CEO} \geq 200 \text{ V}$$

SWITCHMODE power transistors are useful for "off line" converters, switching regulators, deflection circuits, solenoid drivers, and motor control. SWITCHMODE devices, both regular transistor structures and Darlington with and without "speed-up" diodes, are completely characterized in a Designers Data Sheet format. This format includes switching information at 25°C and 100°C for both resistive and inductive loads, as well as clamped inductive reverse-bias SOA.

Other power switching devices with $BV_{CEO} \geq 200 \text{ V}$, but without the SWITCHMODE label or Designers Data Sheet, are included in this table.

Devices are listed in descending order of $V_{CEO(sus)}$, $I_C \text{ Cont}$, and $V_{CEX(sus)}$.

| $V_{CEO} \text{ (sus)}$ Volts Min | $I_C \text{ Cont}$ Amps Max | $V_{CEX} \text{ (sus)}$ Volts Min | Device Type NPN unless otherwise noted | h_{FE} Min/Max | I_C @ Amp | Resistive Switching | | | f_T MHz Min | Case JEDEC/MOT | |

METAL-PACKAGED SMALL-SIGNAL TRANSISTORS

500 AND GROWING! That phrase aptly describes the number of different classifications in Motorola's line of small-signal transistors. And with this many device type numbers covering the small-signal transistor spectrum, it is apparent that the actual differences between some devices becomes quite small. Even when the line is divided into its two natural categories — plastic for lowest cost, and metal for hermeticity — the sheer number of devices in each category makes selection by spec-for-spec comparison a significant task. This selector guide, therefore, ignores the large bulk of general-purpose, small-signal type numbers and concentrates on those transistors that have emerged as the best values in various applications categories.

Since the devices highlighted here are the most popular in each category, it follows that they are among the most widely available, at the lowest cost. They are particularly well-suited for new designs where a continuous, off-the-shelf supply of product is required.

The reader is reminded, however, that semiconductors are manufactured by "batch" processes, and that each "batch" may yield devices with widely varying parameters. This creates device "families". While the various specifications limits assigned to "family members" have been selected on the basis of demonstrated industry need, modern testing methods have made the selection of devices with special characteristics simple and inexpensive. Where the specified characteristics of the devices listed in the following selector guides do not meet a particular design requirement the designer is requested to contact his nearest Motorola sales representative for price quotations on special devices to fit his needs.

TABLE OF CONTENTS

| | Page |

Switching Transistors

The following devices are intended for use in general-purpose switching and amplifier applications. Within each family and package group shown, the devices are listed in order of decreasing turn-on time (t_{on}).

| Package | Family | Device Type | t_{on} | t_{off} | I_C | V_{CE0} | I_C | h_{FE} | I_C | $V_{CE(sat)}$ | | | f_T | |

PLASTIC-ENCAPSULATED SMALL-SIGNAL TRANSISTORS

The Small-Signal Plastic Transistors represent Motorola's broadest product line. From RF/VHF/UHF amplifiers, mixers, oscillators and switches to general-purpose amplifiers and switches, all are available as standard product or custom specials. Specialty devices for the industrial, computer or consumer market as well as a specialty package—the MiniBloc—are all available for unique high technology applications. The following list demonstrates the many applications possible with plastic transistors. If specific applications are not listed, consult your factory representative for assistance.

TABLE OF CONTENTS

| | Page |
|---|------|
| RF/VHF/UHF Amplifiers and CATV Transistors: | |
| ... for high-frequency applications | 136 |
| High-Speed Saturated Switching Transistors | |
| ... for high-speed saturated switching applications | 137 |
| General-Purpose Transistors | |
| ... for general-purpose amplifiers and switches | 137 |
| TO-92 Darlington Transistors | |
| ... for very high gain and input impedance applications | 138 |
| Low-Noise Amplifier Transistors | |
| ... for low-noise audio amplifiers | 138 |
| High-Voltage Transistors | |
| ... for high-voltage amplifier and driver applications | 139 |
| Dual Diodes | |
| ... for use in low-cost biasing, steering, and voltage doubler applications | 139 |
| MiniBloc Devices | |
| ... for hybrid circuits and specialized PC board applications | 140 |

RF/ UHF/ VHF Amplifiers and CATV Transistors

The transistors listed below are high performance, high frequency standard transistors. Devices are in the TO-92 plastic package unless otherwise noted. The transistors are listed in order of decreasing f_T min.

| Device Type | f_T MHz | | I_C mA | C_{cb} C_{ce}^* pF Typ# Max | V_{CEO} Volts Min | G_{pe} G_{pb} dB Typ# Min | NF dB Typ* Max | f MHz | V_{AGC}^* I_{AGC}^* Typ# Min | Gain Reduction dB |

High-Speed Saturated Switching Transistors

The transistors listed in this table are specially optimized for high-speed saturated switches. They are heavily gold doped and processed to provide very short switching times and low output capacitance (below 6 pF). The transistors are listed in order of decreasing turn-on time (t_{on}).

| Device Type | t_{on} & t_{off} ns | | I_C mA | BV_{CEO} Volts Min | h_{FE} Min | I_C mA | $V_{CE(sat)}$ Volts @ | | | f_T MHz Min | I_C mA |

General-Purpose Transistors

These general-purpose transistors are designed for small-signal amplification from dc to low radio frequencies. They are also useful as oscillators and general-purpose switches. The transistors are listed in order of decreasing breakdown voltage (BV_{CEO}).

| Device and Polarity | | BV_{CEO} Volts Min | f_T MHz Min | I_C mA | I_C mA Max | h_{FE} | | I_C mA |

MiniBloc

Unencapsulated semiconductors, used extensively in hybrid circuits, require careful handling and interconnection techniques to ensure a high level of product reliability. To minimize problems during hybrid circuit assembly, Motorola will be offering small-signal semiconductors in a miniature plastic package called the MiniBloc. This small, rectangular package (referred to as the SOT-23 by European manufacturers) is ideally-suited for use in thick-film and thin-film hybrid circuits. The MiniBloc is also used in certain PC board applications.

The new MiniBloc package and Motorola's existing wide array of products, chips, flip-chips, etc. will satisfy most of your hybrid semiconductor requirements. Contact the Small-Signal Marketing group for more information.

The following devices will be the first ones offered in the MiniBloc package:

MOTOROLA

MICRO-T TRANSISTORS and DIODES

Micro-T devices combine high performance with extremely small physical size. The devices shown in these tables are available from stock; all other Motorola small-signal transistors may be obtained in Micro-T packages on special order.

How to Use These Selection Tables

The tables in this section divide the off-the-shelf Micro-T transistors and diodes into major applications categories. In each category, the first delineation is by NPN/PNP (or anode/cathode) device types. Under each of these classifications, the prime devices—those devices designed to a particular set of electrical parameters—are highlighted. Associated with each of the prime devices is a listing of the basic design parameters. Most categories also provide tabulation of other device types utilizing the same basic chip but having relaxed specifications.

TABLE OF CONTENTS

| Switching Diodes | 144 |
| Single and dual diodes with common anode or cathode | |
| Field-Effect Transistors | 144 |
| J-FET and MOSFET | |

RF AMPLIFIER/HIGH SPEED SWITCHING TRANSISTORS

Standard RF devices in Micro-T packages are designed for applications where limited space is critical. This package is particularly attractive from a pre-testing and cost point of view as the RF parameters can be 100% tested for high performance. For complete design data, consult the prime device data sheet. For other RF devices not listed, contact your nearest Motorola sales representative or distributor. Ceramic packages with a cold sealing process are also available.

GENERAL-PURPOSE AND SWITCHING TRANSISTORS

For general-purpose applications and for designs requiring fast switching, the Micro-T packaged transistors are available in either economy plastic or hermetically sealed ceramic. Complete data sheets are available for prime devices; equivalent data sheets may be obtained when the same die is used in other 2N — standard devices. For devices not listed, contact your nearest Motorola representative or distributor.

LOW NOISE/HIGH GAIN AMPLIFIER TRANSISTORS

Two types of specialty transistors complement Motorola's micro-transistor amplifier selection. The combination of high-gain and low-noise have made these standards popular for many years. The Micro-T package coupled with performance permits space premium designs to become a reality. Other high voltage and Darlington transistors are also available as specials.

LOW CURRENT SWITCHING TRANSISTORS

These high speed switching transistors can be used in circuits where space limitations are critical. For design data, consult prime device data sheet or the 2N JEDEC equivalent. For devices not listed, consult your nearest Motorola sales representative or distributor.

FIELD-EFFECT TRANSISTORS

Technologies other than bipolar transistors are available in the Micro-T package. One example is the popular J-FET. Also available are other J-FET and MOSFET devices requiring up to four leads and having a chip size less than 25 mils per side. For lead time and availability, contact your nearest Motorola sales representative.

| | N-Channel J-FET |
|---------------------|---|
| Prime Device | MMT3823 |
| Design Parameters | To 35 V 5.0 mA to 20 mA 4.0 pF 2.0 dB @ 100 MHz, $R_S = 1000$ Ohms |

Note: Other FETs are available as specials.

MOTOROLA

MULTIPLE DEVICES

SMALL-SIGNAL MULTIPLE TRANSISTORS AND DARLINGTON TRANSISTORS

Motorola offers a large selection of Quad, Dual and Darlington transistors for off-the-shelf delivery. The chips used in the Quad and Dual transistors are those that have emerged as the most popular ones for discrete transistor applications. But even beyond that, Motorola offers its entire vast repertoire of discrete small-signal transistors for multiple-device packaging. For special applications where the devices listed may not quite fit the design requirements, special configurations can be supplied with quick turnaround time and low premiums.

How to Use These Selection Tables

The tables in this section divide the off-the-shelf multiple transistors into major applications categories. In each category, the first delineation is by NPN/PNP device types. Under each of these classifications, the prime devices—those devices designed to a particular set of electrical parameters—are highlighted, and the basic (discrete) chip from which these prime devices are formed is indicated. (More characteristic information for these basic chips is given elsewhere in this Master Selection Guide; refer to the Device Catalog for page reference.)

Associated with each of the prime devices is a listing of the basic design parameters, and a tabulation of other device types utilizing the same basic chip but having relaxed specifications. These derivatives are listed in order of decreasing price.

Each device number printed in italics indicates that the associated data sheet contains a set of design curves. These curves are typical for that entire device line.

Motorola Quad Transistors

General-Purpose Amplifier and Switching Transistors

The multiple transistors included in this category have been implemented with discrete transistor chips that have proved to be the most popular for high all around performance at low cost. The line is characterized by a relatively high-current gain over an extremely wide range of dc collector current, a high-frequency response and medium-speed switching capability.

Motorola Darlingtion Transistors

Small-Signal Darlingtion Amplifier Transistors

Darlington amplifiers are cascade transistors used in applications requiring very high-current gain and input impedance. The plastic transistors have monolithic construction and the metal package transistors are two chip construction. The transistors are listed in order of increasing breakdown voltage (BV_{CEO}).

| BV_{CES}^* $V_{CEO(sus)}^{\#}$ BV_{CEO} Volts Min | I_C mA Max | h_{FE} @ I_C | | | $V_{CE(sat)}$ @ I_C | | P_D Watts | f_T MHz Min | NF dB Typ | Device Type | |

FIELD-EFFECT TRANSISTORS

Motorola offers a line of field-effect transistors that encompasses the latest technology and covers the full range of FET applications. Included is a wide variety of junction FETs and MOSFETs, with N- or P-channel polarity with both single and dual gates. These FETs include devices developed for operation across the frequency range from dc to UHF in switching and amplifying applications. Package options from low-cost plastic to metal TO-72 packages are available.

How to Use These Selection Tables

The selector guides on the following pages are designed to emphasize the preferred FET devices—those whose specifications groupings have proved to be the most popular, resulting in a combination of good performance and low cost. The major specifications of these devices are given for easy comparison.

Also given in each table are the family characteristics from which the individual member characteristics have been derived. This makes it easy to determine the portion of the total specifications spectrum covered by each preferred type number. In the event that the preferred-device specifications do not encompass a particular design requirement, it is normally possible to obtain the desired specifications on special order, using the family specification limits as a guide.

TABLE OF CONTENTS

| | Page |
|---|------|
| General-Purpose Devices | 156 |
| Designed for use in general-purpose amplifier and switching applications. | |
| General-Purpose Amplifiers | 157 |
| Transistors designed for amplification in the audio-frequency range. | |
| Choppers and Switches | 158 |
| Devices designed for chopper and high-speed switching applications. | |
| RF Amplifiers | 159 |
| Devices characterized for operation at frequencies as high as 500 MHz. | |

General-Purpose Devices

Using the same transistor for both switching and amplifier applications can reduce inventories and increase purchase quantities to take advantage of quantity price reductions. Transistors listed here represent good, all-around amplifiers in the audio frequency range, and provide satisfactory medium-speed switching capabilities. MOSFETs listed are characterized primarily as switches but can be used as satisfactory general-purpose amplifiers.

JFETs – N-CHANNEL

| Package | Family | Preferred Types | Features | Y_{fs} mmhos Min/Max | I_{DSS} mA Min/Max | $V_{(BR)GSS}$ $V_{(BR)DSS}^*$ Volts Min | $V_{GS(off)}$ $V_{GS(TH)}^*$ Volts Min/Max | NF dB nV/\sqrt{Hz}^* |
|---------|---------|-------------------------------|---|------------------------------|----------------------------|--|---|------------------------------|
| TO-92 | 131 | Standard Family Limits | | 0.5/6.5 | 0.5/24 | to -50 | -0.2/-8.0 | to 2.5 |

MOSFET – P-CHANNEL (Enhancement)

| | | | | | | | | |
|-------|-----|-------------------------------|---|---------|----------|---------|------------|---|
| TO-72 | 123 | Standard Family Limits | | 1.0/4.0 | -1.0/-10 | to -50* | -1.0/-5.0* | — |
| | | 2N4352 | Relatively low-cost, complement to 2N4351 | 1.0/- | -10/- | -25* | -1.0/-5.0* | — |

General-Purpose Amplifiers

The following transistors are designed for amplification in the audio-frequency range. The devices characterized represent the best values and should receive primary consideration. Other family members are also indicated, together with any specific features they may have.

JFET – N-CHANNEL

| Package | Family | Preferred Types | Features | Y_{fs} mmhos Min/Max | I_{DSS} mA Min/Max | $V_{(BR)GSS}$ $V_{(BR)DSS}^*$ V Min | $V_{GS(off)}$ V Min/Max | NF dB nV/\sqrt{Hz}^* |
|---------|--------|-------------------------------|--|------------------------------|----------------------------|--|-------------------------------|------------------------------|
| TO-92 | 131 | Standard Family Limits | | 0.5/6.5 | 0.5/24 | to -50 | -0.2/-0.8 | to 75* |
| | | 2N5457 | Lowest Cost Family. | 1.0/5.0 | 1.0/5.0 | -25 | -0.5/-6.0 | — |
| | | 2N5458 2N5459 | General-purpose application. | 1.5/5.5 2.0/6.0 | 2.0/9.0 4.0/16 | -25 -25 | -1.0/-7.0 -2.0/-8.0 | — — |
| TO-72 | | 2N4220A | Similar to above series, but with specified NF and slightly improved specifications. Somewhat higher cost. Very low noise. | 1.0/4.0 | 0.5/3.0 | -30 | -/-4.0 | 2.5 |
| | | 2N4221A | | 2.0/5.0 | 2.0/6.0 | -30 | -/-6.0 | 2.5 |
| | | 2N4222A | | 2.5/6.0 | 5.0/15 | -30 | -/-8.0 | 2.5 |

Other Family Members

| | | | | | | | | |
|-------|-----|--|--|--|--|--|--|--|
| TO 18 | 124 | (All comparisons are referenced to similarly packaged preferred device types in the tables above.) | | | | | | |
| TO 72 | 131 | MFE2093, 4, 5 – Higher $V_{(BR)GSS}$, higher cost. | | | | | | |
| | | 2N3822, 3 – Higher $V_{(BR)GSS}$, higher cost. | | | | | | |
| | | 2N5358, 59, 60, 61, 62, 63, 64 – Tighter specifications, higher cost. | | | | | | |
| TO-92 | 131 | MPF109, MPF111 – Lowest Cost. Loose specifications. | | | | | | |

JFET – P-CHANNEL

| | | | | | | | | |
|-------|-----|-------------------------------|---|--------------------|-------------------|----------|--------------------|------------|
| TO-92 | 125 | Standard Family Limits | | 0.8/8.0 | 0.3/30 | to 60 | 0.2/9.0 | to 3.0 |
| | | 2N5460 | Good performance, Low cost. | 1.0/4.0 | 1.0/5.0 | 40 | 0.75/6.0 | 2.5 |
| | | 2N5461 2N5462 | | 1.5/5.0 2.0/6.0 | 2.0/9.0 4.0/16 | 40 40 | 1.0/7.5 1.8/9.0 | 2.5 2.5 |
| TO-72 | | 2N3330 | Tighter specifications, metal package, higher cost. | 1.5/3.0 | 2.0/6.0 | 20 | -/6.0 | 3.0 |

Other Family Members

| | | | | | | | | |
|-------|-----|--|--|--|--|--|--|--|
| TO-72 | 125 | 2N3909,A 2N5265, 66, 67, 68, 69, 70 – Very tight specifications. Higher cost. | | | | | | |
| | | MFE4007, 08, 09, 10, 11, 12 – | | | | | | |
| TO-92 | 125 | 2N5463, 64, 65 – Higher $V_{(BR)GSS}$. Higher cost. | | | | | | |
| | | 2N4342, MPF161 – Low cost. | | | | | | |
| | | 2N4360 – Lowest cost. Very loose specifications. | | | | | | |

MOSFET – N-CHANNEL (Depletion-Enhancement)

| | | | | | | | | |
|-------|-----|-------------------------------|--|---------|---------|--------|------------------------|--------------|
| TO-18 | 110 | Standard Family Limits | | 0.7/4.0 | 0.5/15 | to 25* | $V_{GS(TH)}$ -/-8.0 | to 3.8 |
| | | MFE824 | Especially suited for smoke detector applications. | 1.0/- | 1.0/15 | 20* | -/-6.0 | — |
| TO-72 | | MFE3001 | $I_{GSS} = \pm 1.0 \text{ pAdc Max}$ | 0.7/3.5 | 0.5/6.0 | 20* | -/-8.0 | — |
| | | 2N3796 | | 0.9/1.8 | 0.5/3.0 | 25 | -/-4.0 | 3.8 T_{yp} |
| | | 2N3797 | | 1.5/3.0 | 2.0/6.0 | 20 | -/-7.0 | 3.8 T_{yp} |

MOSFET – P-CHANNEL (Enhancement)

| | | | | | | | | |
|-------|--|--------|--|-------|-------|------|-----------|---|
| TO-18 | | MFE823 | Especially suited for smoke detector applications. $I_{GSS} = \pm 1.0 \text{ pAdc Max}$ | 1.0/- | -/-20 | -25* | -2.0/-6.0 | — |
|-------|--|--------|--|-------|-------|------|-----------|---|

Choppers and Switches

FETs have no offset voltages and low "on" resistance. As a result they are especially well suited for chopper/switch applications. The following characterized devices represent the best values and should receive primary consideration.

JFETs – N CHANNEL

| Package | Family | Preferred Types | Features | $r_{ds(on)}$ Ohms Max | $I_{D(off)}$ I_{DSS}^* nA Max | C_{rss} pF Max | $V_{(BR)GSS}$ $V_{(BR)DSS}^*$ V Min | $V_{GS(off)}$ $V_{GS(TH)}^*$ V Min/Max |
|---------|--------|-------------------------------|---|-----------------------------|--|------------------------|--|---|
| TO-92 | 140 | Standard Family Limits | | 25 to 100 | 0.25 to 1 | 3.5 to 8.0 | to -40 | -0.5/-10 |
| | | 2N5638 | Good Performance, low-cost. | 30 | 1.0 | 4.0 | -30 | -- |
| | | 2N5639 | | 60 | 1.0 | 4.0 | -30 | -- |
| | | 2N5640 | | 100 | 1.0 | 4.0 | -30 | -- |
| TO-18 | | 2N4856 | Somewhat improved specifications. Metal Package. Higher cost. | 25 | 0.25 | 8.0 | -40 | -4.0/-10 |
| | | 2N4857 | | 40 | 0.25 | 8.0 | -40 | -2.0/-6.0 |
| | | 2N4858 | | 60 | 0.25 | 8.0 | -40 | -0.8/-4.0 |

Other Family Members

| | | | | | | | | |
|-------|-----|--|--|--|--|--|--|--|
| TO-92 | 140 | MPF4391, 2, 3 – Similar to 2N5638 Series, slightly higher cost. | | | | | | |
| TO-18 | | 2N4091, 2, 3 – Slower than 2N4856 Series, slightly lower cost. 2N4391, 2, 3 – Slightly improved performance, but higher cost. 2N4859, 60, 61 – Same as 2N4856, 57, 58 except for -30 V $V_{(BR)GSS}$. 2N4856A, 57A, 58A, 59A, 60A, 61A – Tighter C_{rss} than non-A version. 2N3970, 71, 72 – MFE 2004, 5, 6. | | | | | | |

Other Family Members

| | | | | | | | | |
|-------|-----|---|--|--|--|--|--|--|
| TO-72 | 136 | MFE2010, 11, 12 – Lower $r_{ds(on)}$, significantly higher cost. | | | | | | |
|-------|-----|---|--|--|--|--|--|--|

JFETs – P-CHANNEL

| | | | | | | | | |
|-------|-----|-------------------------------|--|------------|-----|------------|----|---------|
| TO-92 | 128 | Standard Family Limits | | 100 to 250 | 10 | 5.0 | 30 | 1.0/12 |
| | | MPF970 | Good Performance, low cost. | 100 | 10 | 5.0 | 30 | 5.0/12 |
| | | MPF971 | | 250 | 10 | 5.0 | 30 | 1.0/7.0 |
| TO-72 | 129 | Standard Family Limits | | 150 to 300 | 1.2 | 3.5 to 5.0 | 25 | 1.0/9.5 |
| | | 2N3993 | Higher cost than above plastic series. | 150 | 1.2 | 4.5 | 25 | 4.0/9.5 |
| | | 2N3994 | | 300 | 1.2 | 5.0 | 25 | 1.0/5.5 |

MOSFET – N-CHANNEL (Enhancement)

| | | | | | | | | |
|-------|-----|-------------------------------|--|------------|-----|-----|-----|----------|
| TO-72 | 122 | Standard Family Limits | | 100 to 300 | 10* | 1.3 | 25* | 0.5/5.0* |
| | | 2N4351 | Relatively low cost. Complementary with 2N4352 P-Channel device. | 300 | 10* | 1.3 | 25* | 1.0/5.0* |

Other Family Members

| | | | | | | | | |
|-------|-----|---|--|--|--|--|--|--|
| TO-72 | 122 | 3N169, 170, 171 – Tighter $V_{GS(TH)}$, higher cost. | | | | | | |
|-------|-----|---|--|--|--|--|--|--|

MOSFET – P-CHANNEL (Enhancement)

| | | | | | | | | |
|-------|-----|-------------------------------|---------------------|------------|-------------|--------|---------|------------|
| TO-72 | 123 | Standard Family Limits | | 200 to 600 | 0.25 to 10* | to 1.3 | to -50* | -1.0/-5.0* |
| | | 2N4352 | Relatively Low cost | 600 | -10* | 1.3 | 25* | -1.0/-5.0* |

Other Family Members

| | | | | | | | | |
|-------|-----|---|--|--|--|--|--|--|
| TO-72 | 123 | 3N155, 55A, 56, 56A, 57, 57A, 58, 58A – Tighter parameter limits, higher costs. | | | | | | |
|-------|-----|---|--|--|--|--|--|--|

RF Amplifiers

Devices listed here are characterized for operation at frequencies as high as 500 MHz. Both amplifier and mixer devices are included. In general, amplifier transistors have a small-signal power gain (G_{ps}) specification and a noise figure (NF), while mixer devices are characterized by a conversion gain (G_c) specification and may or may not have an assigned noise figure.

JFET – N-CHANNEL

| Package | Family | Preferred Types | Features | Test Frequency MHz | G_{ps} G_c^* dB Min/Max | y_{fs} mmhos Min/Max | C_{rss} C_{gd}^* pF Min/Max | NF dB Max | $V_{(BR)DSS}$ $V_{(BR)GSS}^*$ V Min |

MOTOROLA

RF TRANSISTORS AND MODULES

This selection guide contains the preferred registered and non-registered RF parts available. From more than 500 total individual available devices, Motorola has selected 19 transistor/module chains from 1.5 to 300 W (PEP) output. All devices are designed, tested and optimized for frequency ranges from 2.0 to 900 MHz. These devices are designed for your advanced RF engineering concepts.

TABLE OF CONTENTS

High Frequency, Low Voltage Amplifier Transistors/ Modules

The transistors listed in this table are specified for operation in RF Power amplifiers and are listed by specific application at a given test frequency. Arrangement within each application group is in the order of increasing output power. Modulation type is given in each application heading.

| Device Type | P _{out} Output Power Watts | G _{PE} Power Gain dB Min | V _{CC} Supply Voltage Volts | Package |
|--|---|---|--|---------|
| 2-30 MHz, SSB TRANSISTORS | | | | |
| 2N6367 | 9.0 PEP | 14 | 12.5 | 211-07 |
| MRF475 | 12 PEP | 10 | 13.6 | TO-220 |
| MRF432* | 12.5 PEP | 20 | 12.5 | 211-07 |
| MRF433* | 12.5 PEP | 20 | 12.5 | 211-07 |
| MRF406 | 20 PEP | 12 | 12.5 | 211-07 |
| MRF425 | 30 PEP | 12 | 12.5 | 145A-08 |
| MRF460 | 40 PEP | 12 | 12.5 | 211-10 |
| MRF454 | 80 PEP | 12 | 12.5 | 211-11 |
| MRF454A | 80 PEP | 12 | 12.5 | 145A-08 |
| MRF421 | 100 PEP | 10 | 12.5 | 211-04 |
| *PNP/NPN Complements for Complementary Symmetry Driver, See EB-32. For Matched Pairs Order MK433. | | | | |
| <p>Chain 1 — 12.5 V, 2-30 MHz</p> <p>Off-road vehicles/Oil tankers/Fishing fleets</p> | | | | |

| MRF905 | 1680 | 20 | 500* | 2200* | TO-46 |

Low-Noise Transistors

The low-noise devices listed are produced with carefully controlled r_b' and f_T to optimize device noise performance. Devices listed in the matrix are classified according to noise figure performance versus frequency.

| NF dB | FREQUENCY MHz | | | | | | Polarity |
|----------|---------------|--------|--------|--------|--------|--------|----------|
| | 60 | 100 | 200 | 450 | 1000 | 2000 | |
| 1.5 | 2N5829 | 2N5829 | | | | | PNP |
| | 2N5031 | 2N5031 | MRF904 | | | | NPN |

*BV_{ceo} = 80 Vdc **BV_{ceo} = 100 Vdc

CATV, MATV, and Class A Linear Transistors

The devices listed below are excellent for Class A linear CATV/MATV applications. The new MRF511 is gaining wide industry acceptance. The devices are listed according to increasing Current-Gain (f_T). More information concerning the device for your specific linear design needs can be obtained through your local Motorola Sales Office or Motorola distributor.

| Device Type | Nominal Test Conditions V_{CE}/I_C Volts/mA | f_T MHz Min Typ* | Noise Figure | Distortion Specifications | | | | Package |

(1) Grounded Emitter TO39 (Case 79-05)

Hybrid Amplifier Modules

The Hybrid Modules listed are specified for amplifier applications in CATV distribution equipment but are applicable wherever broadband (HF/VHF) low distortion, low-noise amplification is required. These modules are also specified as wideband amplifiers for use in communications/instrumentation equipment operating in bands from 1 MHz to 400 MHz.

CATV HYBRID MODULES

PACKAGE INFORMATION

Silicon High Frequency products are available in a variety of packages for many applications. Information on devices in non-standard packaging may be obtained through your local Motorola Sales Office or Motorola distributor.

MOTOROLA

TUNING DIODES HOT-CARRIER DIODES PIN DIODES

The age of electronic tuning and frequency control is here! Mechanical tuning systems are being outdated by the following advantages of electronic tuning systems:

- Mechanical linkage and contacts are eliminated.
- Channel or station changes can easily be made by push button, continuous tuning, signal search or sweep methods.
- Faster response time.
- Remote tuning is simplified.
- Tuning components are much smaller than mechanical components.
- The designer is released from the mechanical and size restrictions dictated by mechanical tuning methods.

Three parameters are of prime consideration in choosing the proper tuning diode.

CT — Nominal capacitance — Measure of the capacitance at one specified voltage.

CR — Capacitance ratio — Ratio of the capacitance at two separate voltages usually at the operating ends of the CV curve. Measure of the magnitude of capacitance change as the reverse voltage is varied across the operating range.

Q — Figure of Merit — The same figure of merit that is widely used for capacitance and coils and is an indicator of how "good" a capacitor the tuning diode is.

These parameters are highlighted in the following selector guide and organized by package style to permit selection of the required specifications and package.

Hot-Carrier Diodes

Hot-Carrier diodes are ideal for VHF and UHF mixer and detector applications as well as many higher microwave frequency applications. They provide stable electrical characteristics by eliminating the point-contact diode presently used in many applications. Motorola has the capability of supplying these devices in a variety of packages.

| $V_{(BR)R}$ $I_R = 10 \text{ A}$ Volts Min | C_T $V_R = 0 \text{ V}, f = 1.0 \text{ MHz (1)}$ $V_R = 15 \text{ V}, f = 1.0 \text{ MHz (2)}$ $V_R = 20 \text{ V}, f = 1.0 \text{ MHz (3)}$ pF Max | V_F $I_F = 10 \text{ mA}$ Volts Max | I_R $V_R = 3.0 \text{ V (4)}$ $V_R = 15 \text{ V (5)}$ $V_R = 25 \text{ V (6)}$ $V_R = 35 \text{ V (7)}$ $\mu\text{A Max}$ | NF dB Max | Device Type | Case |

MOTOROLA

ZENER DIODES

Voltage Regulator and Reference Devices

In every language under the sun, the name most commonly associated with solid-state regulator and reference devices is Motorola. A pioneer in Zener diode development, Motorola has consistently led the industry in parameter improvements, packaging proliferation and specifications innovation. Today, Motorola serves the industry with an incomparable line of zener and avalanche regulator diodes, temperature compensated reference devices, and a host of integrated circuits, designed to provide the exact degree of regulation required, at the point in the circuit or system where it can be used most conveniently at the lowest cost.

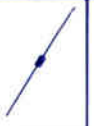

TABLE OF CONTENTS

| | Page |
|---|------|
| Zener and Avalanche Regulator Diodes | |
| Silicon-oxide passivation to provide low leakage, sharp breakover "knee" and long-term stability | 182 |
| Zener Reference Devices (Temperature Compensated) | |
| Consist of forward-biased silicon diode junctions in series with zener-breakdown diode to provide precise degree of temperature compensation. Though not specified, voltage-time stability normally better than 100 parts per million change per 1000 hours of operation. | 185 |
| Special Devices | |
| <u>Precision Reference Diodes</u> | |
| Ultra precision voltage standards with certified voltage-time variations as low as 5 ppm per 1000 hours of operation. | 187 |
| <u>Amplifying Regulator Diodes</u> | |
| Designed for use in regulated power supplies as a combination voltage reference element and error voltage amplifier, providing temperature compensation for excellent reference voltage stability. | 187 |
| <u>Field-Effect Current Regulator Diodes</u> | |
| Provide constant-current output over wider range of terminal voltage. Used in instrumentation (ramp and stair-step generators), over-current protection and other applications requiring a constant current between 0.22 and 4 mA (nom). | 187 |
| <u>Low Voltage Regulators</u> | |
| High-conductance silicon diodes designed as a stable forward reference source for biasing transistor amplifiers and similar applications. | 188 |
| <u>Current Limited Reference Devices (Temperature Compensated)</u> | |
| Designed specifically for precision instrumentation applications, this series of devices offers a 6.40 volt (nominal) output over a wide range of input voltages and temperature. | 188 |
| <u>Tuning Diode Regulator</u> | |
| For use in television and FM radios that use variable capacitance diode tuners. | 188 |
| <u>Transient Suppressors</u> | |
| For applications requiring protection of voltage sensitive equipment against high-energy voltage pulses. | 189 |

ZENER and AVALANCHE REGULATOR DIODES

The devices depicted in the accompanying matrix represent a basic profile of the largest inventoried zener-diode line in the industry. Check the following features for application to your specific requirements.

- Wide selection of package materials and styles:
 - Plastic (surmetic), for lowest cost
 - Glass for highest reliability
 - Metal for highest power
 - Unencapsulated (chips), for hybrid circuit applications
- Power ratings from 0.25 to 50 Watts
- Breakover voltages from 1.8 to 200 V in approximately 10% steps
- Available tolerances from 20% (low cost) to as tight as 1% (critical applications) with off-the-shelf-delivery

| Nominal Zener Voltage | CHIPS (20 Mils Square) Cathode = Bottom Surface | | 250 MILLIWATT (400 mW Package) Cathode = Polarity Mark | 400 MILLIWATT Cathode = Polarity Mark | | 500 MILLIWATT Cathode = Polarity Mark | |

R, RA, & RB = Reverse Polarity Types Available

Zener Diode Options

In cases where standard specifications do not meet application requirements, an appropriate device can be selected and ordered from the following options.

NON-STANDARD ZENER DIODES SPECIAL VOLTAGE AND TOLERANCE RATINGS

JEDEC "1N" type numbers denote a specific Zener voltage, power rating, and tolerance. For example, JEDEC type 1N4728 is a standard 1 watt diode, rated at 3.3 volts $\pm 10\%$. A suffix "A" on this type number indicates a $\pm 5\%$ voltage tolerance.

Special Motorola devices, with a choice of voltages and tolerances, are also available. The following diagram explains the Motorola coding system

For example, the code for a special 10 watt Zener diode with a voltage of 41 volts and a tolerance of $\pm 1\%$ would be 10M41Z1

Following is a list of other standard Motorola symbols for special Zener device orders (X's indicate nominal Zener voltage)

| BASIC MOTOROLA TYPE | DEVICE DESCRIPTION |
|---------------------|------------------------------------|
| 1/4MXXXAZ5 | 250 mW Alloy Glass, $\pm 5\%$ |
| 1/4MXXXZ5 | 250 mW Glass, $\pm 5\%$ |
| 4MXXXAZ5 | 400 mW Alloy Glass, $\pm 5\%$ |
| 4MXXXZ10 | 400 mW Glass, $\pm 10\%$ |
| 5MXXXZS10 | 500 mW Surmetic, $\pm 10\%$ |
| 1MXXXZ5 | 1 Watt Flangeless, $\pm 5\%$ |
| 1MXXXAZ10 | 1 Watt Alloy Flangless, $\pm 10\%$ |
| 1MXXXZ10 | 1 Watt Flangeless, $\pm 10\%$ |
| 1MXXXZS5 | 1 Watt Surmetic, $\pm 5\%$ |
| 15MXXXZ | 1.5 Watt, $\pm 20\%$ |
| 5MXXXZS5 | 5 Watt Surmetic, $\pm 5\%$ |
| 10MXXXAZ5 | 10 Watt Alloy Stud, $\pm 5\%$ |
| 10MXXXZ10 | 10 Watt Stud, $\pm 10\%$ |
| 50MXXXAZ10 | 50 Watt Alloy TO-3, $\pm 10\%$ |
| 50MXXXASZ5 | 50 Watt Alloy Stud, $\pm 5\%$ |
| 50MXXXZ | 50 Watt TO-3, $\pm 20\%$ |
| 50MXXXSZ5 | 50 Watt Stud, $\pm 5\%$ |

For reverse polarities (10 W and 50 W), insert "R" before tolerance, i.e. 50M110SZR5

1N5518 thru 1N5546 — This series may be ordered in $\pm 2\%$ and $\pm 1\%$ tolerance by adding the following suffix.

C = $\pm 2\%$ D = $\pm 1\%$

For example the 1N5518D would be the same as the 1N5518B except $V_Z = 3.3 \pm 1\%$

MATCHED SETS OF ZENER DIODES

Zener diodes can also be obtained in sets consisting of two or more matched devices. The method for specifying such matched sets is similar to the one described for specifying units with a special voltage and/or tolerance except that two extra suffixes are added to the code number described above.

These units are marked with code letters to identify the matched sets and in addition, each unit in a set is marked with the same serial number which is different for each set being ordered

*Code

- B — Two devices in series
- C — Three devices in series
- D — Four devices in series
- E — Five devices in series
- F — Six devices in series
- G — Seven devices in series
- H — Eight devices in series
- P — Two devices in parallel (not recommended)
- X — Two devices, one standard polarity, the other reverse polarity (10 and 50 watts only)

i.e. 10M51Z5B1 is for two 10 watt zeners, each of 51 volts, $\pm 5\%$, matched to a total voltage of 102 volts $\pm 1\%$

ZENER CHIPS (MZC)

1 The nomenclature for Zener Chips is as follows

BASIC TYPE MOTOROLA NOMENCLATURE

MZCXXAX
MZCXXBX

DEVICE DESCRIPTION

Zener Chip—"A" Series, High Level
Zener Chip—"B" Series, Low Level

2. Chips are sold in increments of ten (10) only.
3. The pricing formula for between nominal voltages and tight tolerance zeners shall apply.
4. Chips are **not** sold as matched sets or clippers.
5. A "1" suffix will cause all chips ordered to be supplied in Deka-Pak.

ZENER CLIPPERS

Special clipper diodes with opposing Zener junctions built into the device are available by using the following nomenclature:

i.e. 10M20ZZ10

This nomenclature is applicable to all packages and power ratings as restricted in the above paragraphs.

ZENER REFERENCE DEVICES

For applications where output voltage must remain within narrow limits during changes in input voltage, load resistance and temperature. Motorola guarantees all Reference Devices to fall within the specified maximum voltage variations, ΔV_Z ,

at the specifically indicated test temperatures and test current (JEDEC Standard #5). Temperature Coefficient is also specified but should be considered as a reference only — not a maximum rating.

Devices in this table are hermetically sealed structures. Includes JAN, JANTX and radiation hardened device types. These temperature compensated Zener Reference Diodes have low dynamic impedance and silicon-oxide-passivated junctions for long-term stability.

All devices Case 51 (DO-7) except as noted: ♦

| V _Z Volts | Test Current mA _{dc} | Test Temp Points | AVERAGE TEMPERATURE COEFFICIENT OVER THE OPERATING RANGE | | | | | | | | | |

Δ Non-suffix — $Z_{ZT} = 15$, "A" Suffix — $Z_{ZT} = 10$
 * Radiation Resistant Devices Available; to order, specify MZB21, A or B in lieu of "1N" prefix. Not applicable to J or TX devices.

Molded Assemblies

Multiple-diode structures for higher voltages. Devices consist of hermetically sealed discrete glass-packaged devices, properly interconnected to yield higher voltages and encapsulated in a transfer-molded plastic package. All devices encapsulated in Case 41.

| Reference Voltage V _Z Volts | Test Current I _{ZT} mA | Max Voltage Change ΔV _Z (Volts) @ Test Temperatures (°C) | | Average Temp. Coeff. %°C | Device Type |

(1) These devices are tested at the following temperatures: -55°, +25°, and +100°C.

SPECIAL DEVICES

Precision Reference Diodes

Designed, manufactured and tested for ultra-high stability of voltage with time and temperature change. Use of special measurement equipment and voltage standards provide calibration directly traceable to the National Bureau of Standards.

* < 50 PPM time stability on these devices.

Amplifying Regulator Diodes

Designed for use in regulated power supplies as a combination voltage reference element and error voltage amplifier, providing temperature compensation for excellent reference voltage stability. Available with either PNP or NPN transistors by adding either P or N suffix to part number.

CASE 182-01

TRANSIENT SUPPRESSORS

Power Transient Suppressors

Transient suppressors designed for applications requiring protection of voltage sensitive electronic devices in danger of destruction by high energy voltage transients. Select from standard factory available types or design the suppressor to meet specific needs by paralleling cells. For specific options, i.e., non-standard voltages, higher power capacity, and package configurations, consult factory.

Power Rectifier/Power Surge Suppressor

... designed for applications requiring a low voltage rectifier with reverse avalanche characteristics or for use as a reverse power transient suppressor. Developed to suppress transients in the automotive system, this device operates in the forward mode as a standard rectifier or reverse mode as a power zener diode and will protect expensive mobile transceivers, radios and tape decks from over-voltage conditions.

|  | B_V Breakdown Voltage @ $I_R = 100$ mA Volts | I_R Reverse Current @ $V_R = 20$ V Max μA | V_F Instantaneous Forward Voltage @ $i_F = 79$ A Volts | $I_{(RMS)}$ Forward Current Max Amp | Device Type |

CASE 296-03

Polarity: Standard polarity is cathode to case – MR2525
Reverse polarity is anode to case and is designated by an "R" suffix – MR2525R

MOTOROLA

RECTIFIERS

From tiny, lead-mounted, low-current rectifiers to powerful multi-cell units with near-thousand-amp capacity; from single-phase, half-wave devices to three-phase circuits; from conventional diode junctions to special-purpose units for specific applications, Motorola's extensive line of rectifiers satisfies every possible requirement for electronic equipment. Moreover, volume production unmatched in the industry offers low-cost selection potential.

TABLE OF CONTENTS

| | Page |
|--|------|
| General Purpose Rectifiers | |
| <u>Low and Medium Current</u> | 192 |
| Single-cell rectifiers with forward current ranging from 1A to 50A and reverse voltage ratings up to 1000 volts. | |
| <u>High Current</u> | 194 |
| Multi-cell devices with up to 700 A/600 V off-the-shelf ratings and even greater current and voltage capability on a custom basis. | |
| Rectifier Bridges and Circuits | |
| <u>Low-to-Medium Current</u> | 195 |
| A variety of packaging methods yields current ratings up to 35 A and reverse-voltage ratings to 1000 V. | |
| <u>High Current</u> | 196 |
| Single-phase and three-phase bridges and circuits with current ratings up to 650 A. | |
| Special Purpose Rectifiers | |
| <u>Fast Recovery Devices</u> | 197 |
| For circuit applications requiring switching times from 200 to 1000 nanoseconds. Current rating up to 50 A. | |
| <u>Hot Carrier Devices</u> | 198 |
| For high-frequency power supplies demanding switching times of less than 10 nanoseconds. | |
| <u>High-Voltage Diodes and Stacks</u> | 199 |

GENERAL PURPOSE RECTIFIERS

Low and Medium Current

Wide variety of low-cost devices to fit any mounting requirements.
 These lines are also available with anode-to-case connection by adding "R"
 suffix to the standard part number.

High-Current Multi-Cell Rectifier Diodes

Multi-Cell construction, with matched cells, for excellent thermal management and highest reliability. Normally available with cathode connected to case. Add "R" suffix to type number for reverse polarity.

RECTIFIER BRIDGES and CIRCUITS

Low -To-Medium Current

Single-phase rectifier bridges with a wide variety of packaging options. Standard devices are made with general-purpose rectifiers, but similar configurations can be made with special rectifier-cells (i.e., fast recovery cells) on special order.

Fast Recovery Rectifiers

... available for designs requiring a power rectifier having maximum switching times ranging from 200 ns to 750 ns. These devices are offered in current ranges of 1.0 to 50 amperes and in voltages to 600 volts. Higher voltages are available upon request, but a necessary trade-off against switching speeds results. Reverse polarity (anode to case) obtained by adding an "R" suffix.

‡Package Size: 0.120" Max Diameter by 0.260" Max Length.

Hot Carrier Rectifiers

... Schottky barrier devices, ideal for use in low voltage, high frequency power supplies and as free-wheeling diodes. These units feature very low forward voltages and switching times estimated at less than 10 ns. They are offered in current ranges of 0.5 to 5.0 amperes and in voltages to 40. Reverse polarity (anode to case) is not available.

THYRISTORS and TRIGGERS

Motorola's extensive line of thyristors consists of two generic component categories — SCRs and Triacs. Within each of these categories are two basic packaging divisions, plastic and metal — plastic for lowest cost and metal hermetically sealed packages for applications requiring highest reliability. Combined, these divisions include a large number of individual devices covering a forward-current range from 0.5 to 80 Amperes and a blocking voltage range from 15 to 800 Volts.

But the availability of devices for a wide range of current and voltage requirements doesn't begin to tell the whole story. For within the large selection of different series numbers are device families with characteristics designed for specifically designated applications. Here are some examples of preferred device families for the more high-volume applications, and for special unique purposes.

TABLE OF CONTENTS

| | Page |
|---|------|
| THYRISTOR DEVICES | |
| SCRs in Plastic Packages (0.8 — 25 Amp) | 202 |
| Triacs in Plastic Packages (0.45 — 15 Amp) | 203 |
| SCRs in Metal Packages (0.5 — 35 Amp) | 204 |
| Triacs in Metal Packages (15 — 40 Amp) .. | 206 |
| Pulse Modulators in Metal Packages (80 Amp) | 207 |
| TRIGGER DEVICES | |
| Unijunction Transistors | 208 |
| Programmable Unijunction Transistors | 209 |
| Diac (3-Layer Diodes) | 209 |
| Silicon Bidirectional Switch | 209 |
| Silicon Unidirectional Switch | 209 |

THYRISTORS in PLASTIC PACKAGES

Excellent reliability and low cost make Motorola plastic-packaged thyristors the preferred devices for high-volume, low and medium current applications. Batch-processed, high-impact plastic provides outstanding mechanical ruggedness while oxide or glass surface passivation protects each die against impurity contamination and moisture penetration for long-term electrical stability.

SCRs in METAL PACKAGES

For current handling requirements up to 35 Amperes, with up to 800-Volt blocking potential, Motorola metal packaged SCRs combine highest reliability with the design flexibility offered by a wide variety of package options. Pulse modulator SCRs provide pulse current capacity to 1000 Amperes for radar and similar applications.

TRIGGER DEVICES

UJT

PUT

SBS

SUS

DIAC

Trigger devices come under a variety of different classifications, with somewhat differing characteristics –

- Unijunction Transistors
- Unidirectional Switches
- Bidirectional Switches
- Bilateral Triggers

The principal function of all of these is to act as trigger devices for SCR and Triac circuits. Motorola makes them all, and with sufficient breadth of specifications to meet any circuit requirement.

The variety of different trigger devices available complicates device selection. No specific type of trigger has a clear-cut advantage over all others. Hence, trigger selection is often very subjective, based on the designer's experience and familiarity. Nevertheless, some basic comparisons can be drawn that might simplify the job of trigger selection for designers who have not already formed specific preferences. The matrix below compares various trigger devices in terms of design-oriented characteristics, thus providing a first-order evaluation for trigger and timer applications.

GENERAL COMPARISON OF DEVICE PROPERTIES AND CHARACTERISTICS *

| | UJT | PUT | DIAC | SBS | SUS |
|---------------------------|-------|---------|---------|--------|--------|
| Bidirectional | No | No | Yes | Yes | No |
| Device Cost | 1 | 1 | 1 | 3 | 2 |
| Circuit Complexity | 3 | 4 | 1 | 2 | 2 |
| Device Interchangeability | 3 | 1 | 4 | 2 | 2 |
| Pulse Height | 3 | 1 | 3 | 3 | 3 |
| Sensitivity | 2 | 1 | 2 | 4 | 4 |
| Upper Frequency Limit | 1 MHz | 100 kHz | 500 kHz | 10 kHz | 10 kHz |
| Lower Frequency Limit | 1 Hz | 0.01 Hz | 1 Hz | 30 Hz | 30 Hz |
| Synchronization | Yes | Yes | No | Yes | Yes |

*Where ratings 1 thru 4 are used, the 1 rating is most desirable.

UNIUNCTION TRANSISTORS – UJT

Highly stable devices for general-purpose trigger applications and as pulse generators (oscillators) and timing circuits. Useful at frequencies ranging (generally) from 1 Hz to 1 MHz. Available in low-cost plastic package (TO-92) and in hermetically sealed metal package (Case 22A).

UNIUNCTION TRANSISTORS – (UJT)

* Also available as JAN and JANTX devices

PROGRAMMABLE UNIJUNCTION TRANSISTORS – PUT

Similar to UJT's, except that I_V , I_p and intrinsic standoff voltage are programmable (adjustable) by means of external voltage divider. This stabilizes circuit performance for variations in device parameters. General operating frequency range is from 0.01 Hz to 10 kHz, making them suitable for long-duration timer circuits. Two-package availability provides cost option.

| Package | Device Type | V_S Volts Nom* | | I_S $\mu\text{A Max}$ | I_H mA Max |

BILATERAL TRIGGERS – DIACS

Specifically designed as low-cost bidirectional triggers in line-operated Triac control circuits such as light dimmers, motor controls and temperature controls.

SILICON BIDIRECTIONAL SWITCH – (SBS)

| | | | | | |
|---|---------|-----|-----|-----|-----|
| Plastic Case 29-02 TO-92  | MBS4991 | 6.0 | 10 | 500 | 1.5 |
| | MBS4992 | 7.5 | 9.0 | 120 | 0.5 |

SILICON BIDIRECTIONAL SWITCH – SBS

Applications similar to Diac, but has gate electrode that permits synchronization.

SILICON UNIDIRECTIONAL SWITCH – (SUS)

| | | | | | |
|---|---------|-----|-----|-----|-----|
| Plastic Case 29-02 TO-92  | MUS4987 | 6.0 | 10 | 500 | 1.5 |
| | MUS4988 | 7.5 | 9.0 | 150 | 0.5 |

SILICON UNIDIRECTIONAL SWITCH – SUS

Has gate electrode to permit synchronization.

MOTOROLA

OPTOELECTRONICS

Optoelectronic devices are designed for use in computer, industrial and consumer equipment. Motorola's standard line of optoelectronic products include optical couplers, infrared light emitters and light detectors. Compactness, reliability and compatibility with integrated circuits keynote advantages.

TABLE OF CONTENTS

OPTICAL COUPLERS/ISOLATORS

| | |
|---|------|
| Transistor Output | Page |
| Popular form of isolator that offers moderate speed (approximately 300 kHz), sensitivity and economy | 212 |
| Darlington Output | |
| Designed for use when high transfer ratios and increased output current capability are required. The speed, approximately 30 kHz, is slower than the transistor type but the transfer ratio can be as much as twenty times as high as the single transistor type. | 212 |

INFRARED-EMITTING DIODES

| | |
|--|-----|
| Gallium Arsenide devices emitting in the 900 nm (9000 Å) region. This wavelength is matched to the peak sensitivity of silicon detectors | 213 |
|--|-----|

SILICON PHOTO DETECTORS

| | |
|--|-----|
| Photodiodes | |
| Ideal for detection systems where response times on the order of 1.0 ns are required. Although output levels are low, they can easily be amplified to provide working signal levels. | 213 |
| Phototransistors | |
| One of the most popular detectors offers moderate sensitivity and medium speed (approximately 2.0 μs response time). | 214 |
| Darlington | |
| These devices provide a higher degree of sensitivity for those areas that demand the extreme in this parameter. | 214 |

OPTICAL COUPLERS/ISOLATORS

CASE 673-04

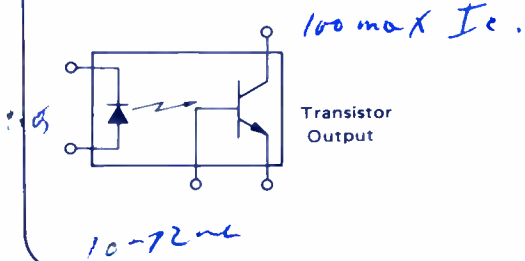

Couplers are designed to provide isolation protection from high-voltage transients, surge voltage or low level noise that would otherwise damage the input or generate erroneous information. They allow interfacing systems of different logic levels, different grounds, etc., that would otherwise be incompatible. Motorola offers a variety of standard isolation voltages from transients protection of 500 to 5000 Volts minimum.

Motorola also offers a wide array of standard devices that have a wide range of specifications (including the first series of DIP transistors and darlington couplers to achieve JEDEC registration: transistors – 4N25 thru 4N28, and Darlingtons – 4N29 thru 4N33).

diode drop 1-1.5V 50ma max diode current

The **Transistor Coupler** is probably the most popular form of isolator since it offers moderate speed (approximately 300 kHz), sensitivity and economy. In addition, the collector-base junction can be used as a photo diode to achieve higher speeds. The output in the diode mode is lower, requiring amplification for more usable output levels.

For High Speed, Moderate Efficiency

| Device Type | Isolation* Voltage Volts Min | DC Current Transfer Ratio % Min | BV _{CEO} Volts Min | Collector Output Current @I _F = 10 mA Typ mA |
|-------------|------------------------------|---------------------------------|-----------------------------|---|
| 4N28 | 500 | 10 | 30 | 2.0 |
| 4N26 | 1500 | 20 | 30 | 3.5 |
| 4N27 | 1500 | 10 | 30 | 2.0 |
| 4N38 | 1500 | 20 | 80 | 3.5 |
| 4N37 | 1500 | 100 | 30 | 2.0 |
| 4N36 | 2500 | 100 | 30 | 2.0 |
| 4N25 | 2500 | 20 | 30 | 3.5 |
| 4N25A** | 2500 | 20 | 30 | 3.5 |
| 4N38A** | 2500 | 20 | 80 | 3.5 |
| 4N35 | 3550 | 100 | 30 | 2.0 |
| MOC1005 | 5000 | 20 | 30 | 5.0 |
| MOC1006 | 5000 | 10 | 30 | 3.0 |

*AC peak voltage — one full sine wave 60 Hz.
**Underwriter Laboratory Recognition

6 pins 1-1.5V 4N35 100ms

The **Darlington Transistor Coupler** is used when high transfer ratios and increased output current capability are needed. The speed, approximately 30 kHz, is slower than the transistor type but the transfer ratio can be as much as twenty times as high as the single transistor type.

For High Efficiency, Moderate Speed

| Device Type | Isolation* Voltage Volts Min | DC Current Transfer Ratio % Min | BV _{CEO} Volts Min | Collector Output Current @I _F = 10 mA Typ mA |
|----------------|------------------------------|---------------------------------|-----------------------------|---|
| 4N30 (MOC1200) | 1500 | 100 | | 30 |
| 4N31 | 1500 | 50 | 30 | 10 |
| 4N33 | 1500 | 500 | 30 | 60 |

| 4N32 | 2500 | 500 | 30 | 60 |
| 4N32A** | 2500 | 500 | 30 | 60 |

*AC peak voltage — one full sine wave 60 Hz.
**Underwriter Laboratory Recognition.

INFRARED-EMITTING DIODES

Infrared (900 nm) gallium arsenide emitters are available from Motorola for use in light modulators, shaft or position encoders, punched card and tape readers, optical switching and logic circuits. They are spectrally matched for use with silicon detectors.

Peak Emission Wavelength = 900 nm (Typ)
 Forward Voltage @ 50 mA = 1.2 (Typ)

Emission Angle — Angle at which I_R emission is 50% of maximum intensity.

| Package | Device Type | Emission Angle α | Instantaneous Power Output Typ μ W |
|---|------------------|-------------------------|--|
|  Case 81A-01 Metal Actual Size  | MLED910 | 30° | 150 @ 50 mA |
|  Case 209-01 Metal Actual Size  | MLED930 | 30° | 650 @ 100 mA |
|  Case 234-02 Clear Plastic Actual Size  | MLED60 MLED90 | 65° 65° | 550 @ 50 mA 350 @ 50 mA |
|  Case 29-02 Plastic Actual Size  | MLED92 | 110° | 650 @ 100 mA |

PHOTO DETECTORS

A variety of silicon photo detectors are available for a wide range of light detecting applications. Devices are available in packages offering choices of viewing angle and size in either low cost, economical, plastic cases or rugged, hermetic, metal cans. Advantages over photo tubes are high sensitivity, good temperature stability, and proven silicon reliability. Applications include card and tape readers, pattern and character recognition, shaft encoders, position sensors, counters, and others. Maximum sensitivity occurs at approximately 800 nm.

Photodiodes

Photodiodes are used where high speed is required (1.0 ns).

| Package | Type Number | Light Current @ H | | BVR Volts Min | Dark Current @ Volts | |
|---|-------------|---------------------|-----------|---------------|----------------------|----|
| | | Typ μ A | mW/cm^2 | | nA Max | |
|  Case 209-01 Metal Convex Lens Actual Size  | MRD500 | 9.0 | 5.0 | 100 | 2.0 | 20 |
|  Case 210-01 Metal Flat Lens Actual Size  | MRD510 | 2.0 | 5.0 | 100 | 2.0 | 20 |

Phototransistors

Phototransistors are used where moderate sensitivity and medium speed (2.0 μs) are required.

| Package | Type Number | Light Current | | BV _{CEO} Volts Min | Dark Current | |
|---|-------------|---------------|----------------------|-----------------------------|--------------|-----------------------|
| | | Typ mA @ | H mW/cm ² | | nA Max @ | V _{CE} Volts |

The following pages contain a listing of devices which are available for military applications, and a complete alphanumeric listing of all standard Motorola semiconductors. This listing serves three specific purposes:

1. It serves as a quick guide to all product type numbers available from Motorola;
2. It provides a product-category identification for all Motorola-manufactured devices;
3. It indicates the "preferred" status of various Motorola products by referencing a page number in the Selector Guide portion of this document on which more information about the product is given. Device types with an accompanying page reference are considered prime device candidates for new designs. Device type numbers not referenced to the Selector Guides are available for replacement purposes but are not considered to be cost-effective in new designs.

| 2N6058,59 JAN,JTX,JTXV | | /502 |
| 2N6274,77 JAN,JTX,JTXV | | /514 |

Switching and High Frequency Transistors

| MIL-S-19500 | | |
|---------------------|-------|------|
| 2N4261 JAN,JTX,JTXV | | /511 |

RF Transistors

| MIL-S-19500 | | |
|--------------------|-------|------|
| 2N6603,04 JAN,JTXV | | /522 |

INTEGRATED CIRCUITS

A typical military part number consists of the JAN prefix, the general specification number, the detail specification number, and a coded part number.

PART NUMBER DESCRIPTION

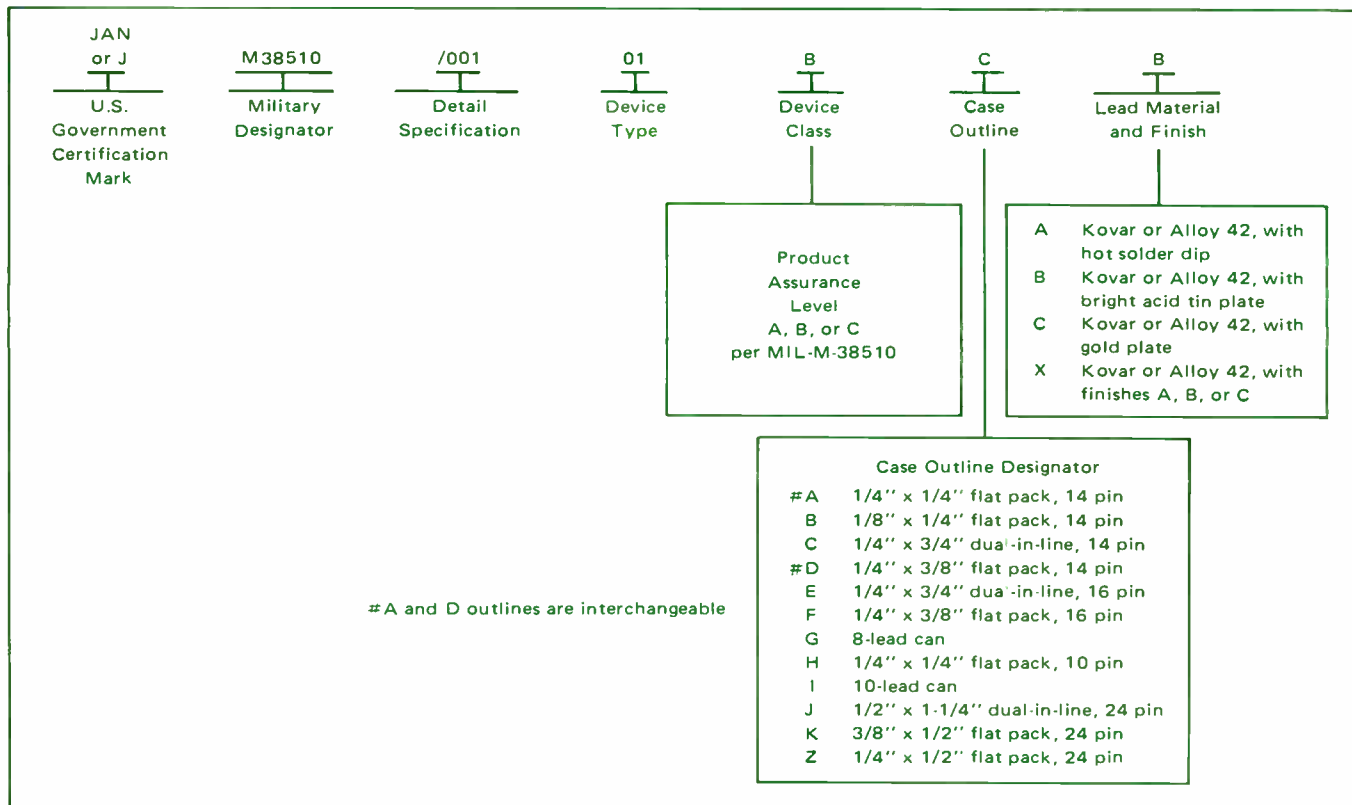

TABLE I – JAN PART NUMBER TO MOTOROLA PART NUMBER CROSS-REFERENCE

Contact your local Motorola sales office or franchised distributor for current qualification status and availability.

MOTOROLA

CATALOG INDEX

A complete index of type numbers in alphanumerical order for instant device identification. Many of the devices are referred by page number to more comprehensive tables in this book. Device types that are not referenced are, nevertheless, manufactured and inventoried by Motorola, but are suggested principally for replacement purposes.
