NEW JERROLD Starline UNITIZED CATV EQUIPMENT

It's installed cost that counts. Think of your savings in installation and pole makeready when all the equipment for a complete distribution station is contained in one compact, unitized radiation-proof housing.

That's what you get with new Jerrold Starline solid-state equipment. Aside from its superior performance and unparalleled cascadability, there's a solid dollars-and-cents reason for going Starline now. Every new Starline unit is complete and ready to mount when it's delivered.

For example, the Starline SA-1 contains a super-cascadable mainline amplifier, a bridging amplifier, and an AGC unit—all sealed in a 16-inch weatherproof, dustproof, radiation-proof cast aluminum housing for mounting on messenger, pole, or crossarm. Or take the SA-5, which contains just an intermediate bridging amplifier. In the Starline Series there's a complete unit for each of your distribution-station requirements—no separate housings, no individual mounting problems.

Add to this simplicity and installation economy the CATV industry's most advanced electronic performance specifications—and you have, in the new Starline Series, CATV's finest equipment achievement. You can cascade more than fifty Starline main-trunk amplifiers, even in a 12-channel system! And full-wave rectification permits the Starline power supply to feed more amplifiers, more smoothly, than ever before.

Gear up for increasing subscriber demand in the Golden Age of CATV. Talk with the man from Jerrold now, or write for complete information on the new Starline Series.

CLOSED CIRCUIT

Freedom brigade

Broadcasting will be well represented at forthcoming Senate probe into fair-trial-vs.-free-press issue, including related question of radio-TV access to courts. Invitations have gone to top network executives—Leonard Goldenson (ABC), Frank Stanton (CBS), Robert Kintner (NBC)—Bruce B. Palmer, president of Radio Television News Directors Association; NAB President Vincent Wasilewski; Theodore Koop, CBS Washington vice president and chairman of special all-media committee.

Hearings, scheduled before joint sessions of Senate Judiciary Constitutional Rights and Judicial Machinery Subcommittee Aug. 17, 18, 19, will focus on $290, bill introduced by Senator Wayne Morse (D-Ore.) to outlaw release of information on criminal proceedings by officers of court, lawyers or defendant. Senators hope to keep scope of hearings broad, however, in keeping with thorny nature of constitutional issues involved.

Campaign windfall

Early FCC estimates on amount of money spent on political broadcasting during 1964 campaign appear to have been correct. FCC report on political broadcasting, due out this week, puts figure at $34.6 million, about same as that quoted to Senate Communications Subcommittee by commission earlier this year. Figure is some $15 million more than was spent with broadcasters during off-year election in 1962. Some 30% of 1964's political broadcasting dollars went into radio, 70% to TV.

Equalizing the bait

Still nettled about Milwaukee Braves' plan to leave for Atlanta after current baseball season, Senator William Proxmire (D-Wis.) is getting ready to go to Senate floor with bill to make it mandatory for teams to pool all their radio-TV earnings. Proposal had been offered as amendment to Hart bill that would give all professional sports same status under antitrust legislation, but amendment was knocked out in committee. Senator Proxmire contends that if all teams shared local receipts as well as network money, cities would not be able to lure teams with promise of huge radio-TV contracts.

In a 15 station market, why does WBAL get more than 1 out of every 4 Baltimore radio dollars?*

RESULTS!

After all, more people listen to WBAL than to any other Baltimore radio station.**

Georgia ETV's like movie art theaters?

REGENTS ASK FOR CLOSER LOOK AT FEATURE FILMS

Georgia educational television stations, under attack by state broadcasters for showing feature films considered too strong for commercial stations, have not been told to cease practice, but they have been asked to take closer look at what they're putting on air.

Request was made indirectly by John Dunlap, chairman of state board of regents, and followed complaint by Georgia Association of Broadcasters to Governor Carl Sanders, and governor's subsequent request that regents investigate.

Question of what educational stations should program is not new in state. In 1963, GAB had questioned propriety of ETV purchasing feature film packages and showing them in competition with films purchased by and shown on commercial stations (BROADCASTING, May 6, 1963). Gist of GAB complaint at that time was that ETV's should stick to educating and stop using state funds to program entertainment on regular basis.

Morality - GAB now says it is "altered . . . at highly questionable, and by some standards immoral, feature movies bought recently by thousands of taxpayers' dollars" to be shown on WGTV(TV) Athens, licensed to University of Georgia. "Under no possible criterion can these films be classed as educational," GAB maintained.

"Room at the Top," double Academy Award winner, had been banned in Atlanta area when it first came out and was seen only after state supreme court had struck down movie censorship. "Riñifi" and "Anna" were said to have been purchased by commercial station in area, but not shown because they were considered "too rough."

New rates for Bird cheers networks

Expectation of more frequent TV use of Early Bird satellite came Friday (July 23) following announcement by European post offices of lower rates for their part in trans-Atlantic TV service. On week days during nonpeak telephone hours Europeans have now set rates at $2,250 for first 10 minutes of service and $40 for each additional minute. When combined with Comsat and common carrier surcharge this makes package rate of $4,400 for first 10 minutes and $85 each minute thereafter.

Adding to more favorable network attitude toward Early Bird is fact that they expect to be able to share time on satellite. Thus 15 minutes of service in nonpeak hours, costing $4,825 could be split by TV networks into three five-minute news feeds, about $1,600 each. One network news representative said Early Bird "is not going to be an every night proposition, but they're getting close to making this thing usable."

An official of another network said the outlook for Early Bird usage "looks brighter but the basic rate structure is still too high."

Complications in rate structure arise from different definitions of nonpeak time used by Americans and Europeans. Latter will charge at their nonpeak rates for 5-7 a.m. EDT and 4:30-8 p.m. EDT, weekdays but they consider all weekend periods peak time. American nonpeak times are 5-7 a.m. EDT and 4-9 p.m. EDT, weekdays and all of weekends.

Americans' peak rates are $3,500 for first 10 minutes and $60 for each added minute, while Europeans' top charges are $5,000 for first 10 and $125 for each added minute.

Deadline now Dec. 31 for FM non-duplication

More than 100 FM stations which had been holding their breath at approach of Oct. 15, deadline when FCC's AM-FM non-duplication rule was to go into effect, can breathe more easily now. FCC on Friday (July 23) extended deadline to Dec. 31 for 106 FM stations which had requested permanent exemption.

Effectiveness of rule for three other FM's (KCPX Salt Lake City; WAVA Arlington, Va., and WGAN Cleveland), which had sought temporary exemption, was extended to April 15, 1966.

Rule says that FM's in cities of more than 100,000 population can devote no more than 50% of broadcast week to duplication of programming of commonly owned AM in same area (BROADCASTING, June 21 et seq.).

All other FM's, which are covered by rule but had not sought exemption, will be required to comply with Oct. 15 deadline.

Agency also noted that its decision on 109 exemption requests would be reached during month of September.

Merrill sells CATV's to LIN Broadcasting

First public announcement of sale of major group of CATV systems emanating from five-day National Community Television Convention in Denver came Friday (July 23). It was $4 million purchase of Bruce Merrill's Valley Telecasting Co. by Gregg Cablevision Co.

Gregg Cablevision is owned by LIN Broadcasting Co. (WMK Nashville; WAKY Louisville, Ky.; KEEL Shreveport, La., and KAAY Little Rock, Ark.). LIN Broadcasting is principally owned by Frederick Gregg Jr. and John R. Ozier.

Systems changing hands are those in Yuma, Ariz. (where Mr. Merrill continues to own KIVA[Tv]), and systems in lower California (El Centro, Holtville, Brawley and Calexico), serving in aggregate over 10,000 subscribers.

Previous simultaneous non-duplication agreement with KIVA will be continued, Gregg spokesman said.

Mr. Merrill's American Cable Television Co. will still own 25 CATV systems, as well as American Television Relay Inc. (microwave systems), and Ameco Inc., Phoenix, CATV manufacturer.

Gregg Cablevision now operates one CATV system in Huntington, Tenn., has two other under construction, and holds franchises for 26 other communities. Kenneth W. Knight is manager.

At same time, LIN signed $2 million
Walter Rozett elected VP and assistant to president of CBS Radio, effective Aug. 16. Arthur Hull Hayes is president of CBS Radio. Mr. Rozett has served as assistant treasurer at CBS Inc. since 1960. He joined CBS Radio in 1952, and served in various executive capacities with network including budget director, director of accounting, and director of administrative operations.

William G. White and Robert Palmer, both VP's, Cunningham & Walsh, New York, promoted to new posts. Mr. White, who was associate media director and manager of media department, becomes director of media services. He joined agency in 1963. Mr. Palmer, elevated to manager of TV programing, has been with C&W since 1956 in various media positions, and most recently was group media director.

By producing programs or financing them, staff says, three networks have acquired control of 93.1% of prime time programing.

Staff restates position that three networks control economics, art, and creativity of TV programing, and says this is inconsistent with public interest.

Staff also seeks to rebut argument that advertisers who, under proposal, would have chance to control more programs, would not contribute to diversity in programing. Testimony of advertisers, report says, establishes that they have preferences "not all cut from the same pattern."

Report noted prosperity of television, particularly network television. It put total net income for three networks in 1963 at $635.8 million (60% for talent, programing; 40% for time).

Importance of network programing is indicated by comparison of network-owned stations with independents in Los Angeles and New York in 1962. Six network stations in those markets had $90,400,000 net revenue, $43,400,000 in income; eight independents in two markets had $50,600,000 revenue in 1962, $8,300,000 in income.

Southerners defended on civil rights editorials

Many southern radio-TV editors hit harder on civil rights issues than any New York station, John K. Williams, executive secretary of Georgia Association of Broadcasters, told National Broadcast Editorial Conference Friday (July 23) at Evanston, Ill. But he admitted many small radio stations don't editorialize through fear of sponsor boycott like that faced by wbox Bogalusa, La. (Broadcasting, March 27).

Speech followed talk by David C. Horowitz, director of public affairs at WMCA New York, in which he urged southern broadcasters to take stronger civil rights stands (see page 58).

There is great local resentment among news media in South against "outside" coverage by networks and wire services. Mr. Williams reported. He said dislike also exists among many southern leaders because of belief that outsiders tell world only about shocking things and neglect proofs of real progress there.

FCC to extend 1% comments

This week FCC is expected to grant joint petition of 22 multiple-station owners and extend to Sept. 1 comment deadline on inquiry and proposed rulemaking dealing with technical violation by mutual funds of agency's 1% standard under multiple ownership rules. Comment deadline is Aug. 1.

DATEBOOK

A calendar of important meetings and events in the field of communications.

JULY
July 26 — FCC deadline for filing comments on Part I and paragraph 50 of Part II of the commission's notice of inquiry and proposed rulemaking, issued April 22, looking toward asserting jurisdiction and regulating non-microwave community antenna TV systems. Former filing date was July 9.

July 29 — FCC deadline for filing reply comments on the joint petition for rulemaking by Zenith Radio Corp. and Teco Inc. requesting the commission to authorize nationwide subscription television. The former deadline for replies was June 10.

AUGUST
Aug. 2 — Deadline for reply comments on the FCC's inquiry into the optimum frequency spacing between assignable frequencies in the land mobile radio service, and the feasibility of frequency sharing by television and the land mobile services. Former deadline was June 18.

Aug. 2 — Deadline for comments on the FCC's notice of inquiry and proposed rulemaking relating to mutual funds and other investment houses that are in technical violation of the commission's multiple-ownership rules. Former deadline was June 14.

Aug. 3 — FCC deadline for reply comments relating to frequency allocations and technical standards of its proposed rules governing the licensing of microwave radio stations used to relay TV signals to community antenna TV systems. Former deadline was May 3.

Aug. 4 — Annual Georgia Association of Broadcasters TV Day. Speakers include Warren Bahr, executive vice president, Young & Rubicam, New York; William Bartholomay, board chairman, Atlanta Braves baseball team; Lee Franks, Georgia ETV director, and Marcus Bartlett, Cox Broadcasting, Atlanta. Riviera motel, Atlanta.

Aug. 6-7 — Summer convention of New Mexico Broadcasters Association. Roswell Inn, Roswell.

Aug. 29 — Deadline for comments on the FCC's rulemaking proposal looking toward adopting new field strength (propagation) curves for the FM and TV broadcast services. The proposal would update the F (50, 50) curves now in the rules to take advantage of additional measurements, especially in the UHF television band.

Aug. 24-Sept. 4 — National TV and Radio Show, under the direction of the Industrial and Trade Fairs Ltd. will feature various types of broadcasting equipment. London.

Aug. 27-29 — Fall meeting of Arkansas Broadcasters Association with election of officers. Coachman's Inn, Little Rock.

Aug. 30-Sept. 1 — Institute of Electrical and Electronics Engineers annual international

RUNNING TIME: 115 MINUTES
You can’t measure the true worth of authoritative facts about the TV and radio business by how much space it takes to present them or how many pounds they weigh.

If this were so, we could tell you that the 600 pages of broadcast information in the 1966 BROADCASTING YEARBOOK — scheduled for mid-December publication — will have a total area of 4,537½ square feet and tip the scales at almost 2½ pounds.

Quantity, however, is not the same thing as quality. All this bulk merely proves that television and radio today add up to a complicated business. It takes a lot of knowledge, a lot of digging, a lot of editing — and a lot of pages — to record the basic information which people who work in broadcasting must have daily at their finger tips.

BROADCASTING YEARBOOK is a one-book library of facts, conveniently tab-indexed for instant use. So wide is its range that this famous TV-radio encyclopedia — now going into its 35th annual edition — actually combines 51 separate and distinct directories within a single volume.

BROADCASTING YEARBOOK is universally recognized as the most complete, authentic and useful source of broadcast business facts available anywhere. It is studied, thumbed through, quoted as authority by advertisers, agencies and station management from the day it arrives until the day when the next year’s edition is received.

It stays on the desks of people who are important to you, ready for frequent reference, throughout a full 12 months.

There is certainly information about yourself that you want these people to know. Strategically placed in the pages of the 1966 BROADCASTING YEARBOOK, your advertisement keeps making multiple impressions upon them all year long. Best of all, it tells your story at the exact time these makers of buying decisions are receptively interested.

ONE advertisement in 20,000 copies of BROADCASTING YEARBOOK delivers the repetitive impact of a full year’s campaign — yet at ordinary rates. The closing deadline is October 1. But the time to reserve the best position in the directory section of your choice is now. It’s as easy as calling the nearest BROADCASTING office and reverse the charges or mailing your space order today.

New York  Chicago  Hollywood
antenna and propagation symposium, Sherraton Park, Washington. (For advance reservations write 1965 AP Symposium, P. O. Box 6, Riverdale, Md. 20737.) Aug. 31—New deadline for reply comments on the FCC's notice of inquiry and proposed rulemaking relating to mutual funds and other investment houses that are in technical violation of the commission's multiple-ownership rules. Former deadline for reply comments was July 12.

Aug. 31—New deadline for reply comments on the FCC's rulemaking proposal looking toward adoption of a new field (propagation) curve for the FM and TV broadcast services. The proposal would update the F50, F50 curves now in the rules to take advantage of additional measurements, especially in the UHF television band.

SEPTEMBER

Sept. 10-11—Annual fall meeting of Maine Association of Broadcasters. Speakers include Vincent T. Wasilewski, president, National Association of Broadcasters; FCC Commissioner Kenneth A. Cox; H. Taylor (Bud) Vaden. Blackstone Inn, Freeport. Sept. 10—Fall conference of Montana Broadcasters Association on music licensing. Participants include Herman Finkelstein, counsel for American Society of Composers, Authors & Publishers; Sidney Kay, board chairman of Broadcast Music Inc., and Jim Myers, SESAC. Glacier Park Lodge, East Glacier.

Sept. 17—New FCC deadline for filing reply comments on proposed paragraph 56 of Part II of the commission's notice of inquiry and proposed rulemaking, issued April 23, looking toward regulation of non-microwave community antenna TV systems. Former filing date was Aug. 6.

Sept. 19-21—Annual fall meeting and election of officers of Louisiana Association of Broadcasters. Speakers include Sherrill Taylor, vice president for radio, National Association of Broadcasters, and William Carlisle, vice president for station relations, NAB. Fontainebleau hotel, New Orleans.

Sept. 19-21—Annual fall meeting and election of officers of Nebraska Broadcasters Association. Speakers include Vincent T. Wasilewski, president, National Association of Broadcasters. Blackstone hotel, Omaha.

Sept. 20—New deadline for comments on the FCC's further notice of proposed rulemaking relating to fostering expanded use of UHF television frequencies by setting aside channels 70 through 83 inclusive for a new class of 10-kw community TV stations with a 300-foot antenna limitation.

Sept. 22-23—Annual fall meeting of Minnesota Broadcasters Association. Speakers include Sherrill Taylor, vice president for radio, National Association of Broadcasters. Radisson hotel, Minneapolis.

Sept. 27—New FCC deadline for filing comments on Part II of its notice of inquiry and proposed rulemaking, issued April 23, looking toward regulating non-microwave community antenna TV systems. Among other things, Part II dealt with (1) effect on development of independent (nonnetwork) UHF stations (2) generalized restrictions on CATV and other systems (3) "leapfrogging" and (4) program origination or alteration by CATV, pay TV and combined CATV-pay TV operators. Sept. 30—FCC's deadline for reply comments on proposed rulemaking looking toward adoption of procedures for establishing antenna farm areas to accommodate growing number of tall broadcast antenna towers, while protecting air safety.

OCTOBER

Oct. 1—Deadline for comments on FCC's proposed rulemaking limiting to three nonmicrowave community antenna TV stations (not VHF's) an individual or corporation that has in interest in or owns in one or more of top 50 TV markets.

Oct. 4-5—Society of Broadcast Engineers, national convention, Lewiston, Mont.

Oct. 4-5—Annual convention and elections of New Jersey Broadcasters Association, Morris hotel, Morristown.

Oct. 5—New deadline for reply comments on the FCC's further notice of proposed rulemaking relating to fostering expanded use of UHF television frequencies by setting aside channels 70 through 83 inclusive for a new class of 10-kw community TV stations with a 300-foot antenna limitation.

Oct. 9-10—Fall conference and board meeting of Florida Association of Broadcasters. Silver Springs.

Oct. 14-22—Twelfth annual meeting of MIFED, Milano International Film, TV Film and Documentary Market, including first presentation of TV Pearl awards for best feature or serialized film and best short film produced for TV in 1965-66. Durban.

Indicates first or revised listing.

NAB CONERENCE SCHEDULE

Oct. 18-19—Marriott motor hotel, Atlanta.

Nov. 11-12—Sheraton-Chicago, Chicago.

Nov. 15-16—Brown Palace, Denver.

Oct. 15—Effective date of FCC's new AM-FM nonduplication rule which prohibits any FM station from duplicating more than 50% of programming of commonly owned AM station in cities of 100,000 population or more. Former effective date was Aug. 1.

Oct. 15-17—American Federation of Advertising fifth district convention. Sheraton Cleveland, Cleveland.

Oct. 21—Deadline for comments on FCC's proposed rulemaking to limit three major television networks (ABC, CBS and NBC) to equity holdings in no more than 50% of all nonnetwork programming between 6 and 11 p.m., or to two hours of nonnetwork programming in same period, whichever is greater. Proposal would also prohibit three TV networks from domestic syndication and foreign sales of independently produced programs.

Oct. 22—Deadline for comments on FCC's notice of inquiry to determine if stereophonic sound transmissions could and should be used in television broadcasting.

Oct. 25-27-21st annual National Electronics Conference. Included will be exhibition involving more than 500 electronics firms. McCormick Place, Chicago.

Oct. 28-29—Fall convention of Ohio Association of Broadcasters. The Christopher Inn, Columbus.

Oct. 28-29—Annual fall meeting of Missouri Broadcasters Association, Ramada Inn, Jefferson City.

Oct. 31-Nov. 3—American Association of Advertising Agencies western region convention. Del Monte Lodge, Pebble Beach, Calif.

November

Nov. 1—FCC deadline for reply comments on proposed rulemaking limiting to three number of TV stations (not more than two of them VHF's) an individual or corporation can have interest in or own in one or more of top 55 TV markets.

Nov. 4—Second annual Georgia Association of Broadcasters FM Day, Atlanta.

Nov. 8—Deadline for reply comments on FCC's notice of inquiry to determine if stereophonic sound transmissions could and should be used in TV broadcasting.

Nov. 8-10—Broadcasters Promotion Association 10th annual convention. Washington.

Nov. 11-12—Annual fall meeting of Oregon Association of Broadcasters. Benson hotel, Portland.

Nov. 18-19—Annual fall meeting of Washington State Association of Broadcasters. Spokane.

Nov. 21-22—Annual fall convention of Texas Association of Broadcasters. Sherman, Dallas.

Trade unions and advertising

EDITOR: The article in your July 12 issue, "In union radio there is strength," was of great interest to me.

It is indeed heartwarming that a trade magazine read by people who buy air time for management and industry recognizes that today's trade unions operate in the arena of great respectability. This is particularly the case with the Retail Clerks International Association (the RCIA) . . .

It is true, as you pointed out, "Like any well-managed business concern with a product to sell and a message to deliver, the RCIA has turned to advertising." However, advertising is no new venture for the RCIA . . . For example, on television the RCIA was a sponsor on NBC's Today show during Dave Garroway's tenure.

As for radio, over a period of what to my knowledge is 10 years or more, the RCIA has used radio saturation in a number of cities . . . And for more than the past two years, the RCIA has been buying 30- and 60-second spots on NBC's Monitor every single weekend throughout the year.

The RCIA is the only trade union advertiser on network NBC . . . Obviously, I know the above to be factual since my advertising/public relations agency places RCIA advertising on NBC. This brings up a point that requires clarification. The advertising agency to which you refer in your article—J. M. Sachs & Co., Beverly Hills, Calif.—is engaged by a regional council of the RCIA in Southern California. For national advertising, the agency that represents the RCIA and was appointed advertising agency by headquarters of the RCIA, is William Magnes Advertising, Inc.—William D. Magnes, president. William Magnes Advertising Inc., Washington.

Cigarette logic

EDITOR: Once there was a land where people developed the habit of throwing bricks in the air. Doctors soon noted that they were seeing more patients with bumps on the head and also increasing patient fatalities from fractured skulls . . .

Finally the surgeon general summarized all the research and issued a report stating that the bricks were responsible for the bumps on the head and further stating that special treatment of the bricks (called "filters") weren't giving enough help to be detected . . .

A majority of the members of Congress . . . passed a law requiring appropriate labeling of bricks. However the law prohibited any governmental interference with advertising of the
PRA makes WCCO RADIO...
one of the great stations of the nation

The most: 50,000 watts, 1-A clear channel from 830 kc . . . 24 hours a day, seven days a week. Also, the power of full-size, complete programming. It attracts and holds all kinds of listeners not just a narrow segment of the available audience.

Coverage of a 124-county market in six states. Actually two markets in one: 5-county Twin Cities plus 119 non-metro counties. Total population: 4 million. WCCO Radio reaches more of these people than any other medium in the region.

On WCCO Radio, you enjoy a setting of outstanding acceptance for your sales story. The kind of acceptance that has been earned by more than 40 years of great service to the WCCO-Land market. Nothing sells like acceptance.

Nobody in Washington argues about which is the important station.

A leading broadcast industry publication . . . editorially supported the advertising restraint adopted by the brick manufacturers and lauded the congressional prohibition of governmental intervention in the advertising practices of the brick industry. Further the magazine expressed the opinion that in an additional four years of investigation, evidence as to whether brick throwing is, or is not, a genuine public hazard ought to be considerably clearer . . .

Unfortunately the publication failed to indicate whether the new evidence should take the form of bigger and better bumps or an even greater fatality count. . . .—J. H. Platz, Northwest Monitoring Service, Pendleton, Ore.

(Mr. Platz refers to a July 12 editorial in Broadcasting favorably commenting on the Congress's passage of a bill to require health warnings on cigarette labels but to temporarily restrain the Federal Trade Commission from insisting, as it had proposed, to require warnings in cigarette advertising.)

Tribute to Laurel and Hardy

EDITOR: All this fuss about doing a network TV special, plus a syndicated show now being peddled, as a salute to Stan Laurel and Oliver Hardy seems a little old hat to us here at KHJ-TV Los Angeles.

The week of Feb. 15, before the sad death of Stan Laurel, this station ran a week-long "Salute to Stan Laurel."

The screenings were prefaced by the appearances of Harold Lloyd, Ken Murray and Steve Allen, who taped special interviews for us. Each saluted Laurel and Hardy in his own way.

We tried to get Mr. Laurel to appear on some of our programs, but at the time was too ill to leave his home. We never dreamed that within a couple of weeks he would be gone.—Frank Barron, KHJ-AM-FM-TV Los Angeles.

BOOK NOTE

The author, an associate professor of marketing management and director of a research program in marketing communication at the University of Notre Dame, divides his volume generally into four areas: the behavioral science approach to communications; the behavior of aggregates: markets and audiences; the behavior of individuals, and finally, research as a form of communications. The volume is written not for the amateur but for the student and for the professional in marketing.
Baltimore is a town of good listeners and Bruce Johnson of Metro Radio Sales is a good talker.
Radio-TV's secret sales punch: citizenship

I'm a friend of the broadcast media. But this is no one-way relationship. The media have earned this friendship.

They have earned it by effectively delivering the advertising messages of my company. They also have earned it by constructively influencing the economic, social, cultural, and even the political growth in the area my company serves.

Although a former newspaperman, I have no reluctance about bearing witness to the fact that radio and TV here at the Head-of-the-Lakes area are doing their job well. They are practicing their citizenship every day of the week.

Since I direct the advertising program of our company, with no little help from the sales department of course, I feel qualified to judge the advertising effectiveness of the media in this region. As director of our company's area development program, working with different groups and organizations in all phases of growth involving economic, industrial and human resources, I also feel I can judge with some competence the contributions that the broadcasters are making in these fields.

Budget Build-up - Nearly one-half of our company's quarter-million dollar advertising budget goes into radio-TV time and associated expenses. We prefer program sponsorships for our long-range day-in-and-out basic buys, but we also use spot frequently for special campaigns.

Minnesota Power & Light serves the broad area of central and northeastern Minnesota, all the way from Ely to Little Falls and including the three great iron ranges of Mesabi, Vermilion and Cuyuna. To sell and talk to our customers in this region we use a total of three TV stations and 15 radio stations. But we were not always this active: Once we were very heavy in print.

This more effective balance in the mass media has come about during my dozen years here largely as a result of the professional skills and advice of our advertising agency, H. E. Westmorland Inc. of Duluth. This better balance was achieved, too, without borrowing any dollars from one medium to help another. It was done through general expansion over the years, during which the total budget has increased about three-fold.

Catching Prospects - Some of the increases can be attributed to rate hikes. But many of them have come from our greater advertising effort in the rising competition for consumer attention.

We strive to let each medium do what it is best able to do. Television, for example, has brought us the new dimension of demonstration on a grand scale never before possible through our wide use of visiting home economists, whom we still use. Apart from showing new appliances and cooking techniques, for instance, TV permits us to show how a water heater works, which was not possible before in any practical way.

Radio provides us with both regional and local coverage through the major stations in Duluth and the smaller community stations. This gives us both mass coverage and strong local identification. We find our most effective combination is using both the regional and the local vehicles consistently.

The standard for radio and television in this area is high, set by the major Duluth stations, and embraces both advertising and public service. The stations compete aggressively for audience with one another and the other media through what is to my mind a high calibre of news reporting and individualized programming of music and features.

Civic Response - The major Duluth stations over the years have been well-managed and they have been very responsive to the needs of the community. These stations have attracted talented personalities for the on-air work. While many of these have moved on to bigger jobs at larger stations and the networks, many others have remained in Duluth and the surrounding communities where they too have become deeply involved.

All that I have said up to this point forms the background of the one overriding reason that I am a friend of the broadcast media: the good citizenship practiced by the area's stations.

The top brass of the major Duluth stations, for example, carry through key leadership assignments in a variety of civic causes. This is true also in most smaller stations of the area. More than a reasonable amount of air time and talent goes into worthy projects.

Together this adds up to a lot of good citizenship, certainly enough for most cities. But because of the standard set by one man there is even an additional element on the scene here.

This element is influence for the public good. The man is Bill Krueger, a broadcast journalist at KDAL Duluth, who pioneered on-the-air editorials 20 years ago with KDAL's encouragement. When Bill Krueger's anniversary was celebrated recently, the event drew acclaim from across the U.S.

For a good part of those two decades we have been proud to sponsor Bill Krueger's news program with its "Minor Editorials." Long at 6 p.m. each evening, the show now is slotted in the CBS network round-up at 7 a.m. We tell the listeners each day that we're proud too "because discussion is a stimulant to progress in a free society."

Financial Support - KDAL-AM-TV, as well as other Duluth stations WDSM-AM-TV and WABC are substantial financial supporters of our new Northeastern Minnesota Development Association. It is a $1.5 million five-year plan to build and diversify our economy.

KDAL and WDSM plus the Duluth newspapers have joined our company in a national advertising program to tell America's businessmen of the new economic surge in this region. WDSM also has joined our company and the wood fibre industry to provide an exhibit at the New York World's Fair.

Our stations not only believe good citizenship is good business; they practice it.

Arthur C. Barschdorf since the fall of 1953 has been director of area development and public information for Minnesota Power & Light Co., Duluth. CATV growth paced by problems

Regulation, pole-line rights, copyright law are studied at Denver convention which drew 1,500; percentage of broadcasters continues to grow

The dimensions, as well as the problems, of the community antenna industry, were on parade in Denver last week at the 14th annual convention of the National Community Television Association.

- The registration totalled 1,500, representing over 1,600 CATV systems—from the hamlet cable system serving less than 100 families to giant combines serving multiple thousands.
- Of the 600 cable system operators attending the meeting, at least 100 represented CATV systems that are broadcast-related.
- A score of financial representatives, attested to the economic stability—and the future—of antenna operations, as well as lawyers, brokers, and government observers.
- An estimate by an established TV ratings expert was that CATV systems are serving 2 million TV homes today.

All illustrate the growth of an industry that began a scant 15 years ago in Oregon and Pennsylvania basically created by local businessmen.

The 15 years have wrought changes—particularly in ownership. CATV, once a small time business, and still largely a family affair, has entered the phase of bigness; big money and large, group-owned systems.

Broadcasters Increasing • Among the largest of the groups and becoming more and more the one most significant element in the CATV business are broadcasters.

But it was no broadcaster who predicted that perhaps in another decade, CATV systems would equal 1964 TV revenues. The estimate was made by Bruce Merrill, whose manufacturing, microwave relay and group CATV operating company is headquartered in Phoenix, and who is the retiring chairman of NCTA.

Television took in $2 billion in 1964, Mr. Merrill noted. "At $5 a month, $60 a year, all we would need to equal that would be between 30 and 35 million families," he calculates.

Fantastic? That's the spirit of today's CATV industry.

Problems, Problems • The spirit may be high, but the problems faced by the burgeoning young industry are real. Crises seem to arise yearly. This year's convention had its share, and more.

- Regulation by the federal government and by state governments is one. The FCC wants to assert complete jurisdiction and to force protection for local TV stations. States want to place CATV under public utility control.
- Relations with broadcasters is another. This is considered an element in the regulation issue.
- Telephone companies and pole-line

Money, money everywhere at NCTA convention

If there was one item in evidence at last week's convention of the National Community Television Association, it was money. Investment houses were offering it, finance corporations were offering it, and CATV firms that want to get bigger were offering it.

Among sales announced at the convention were Paper City Television Cable Corp., Berlin, N. H., to United Cablevision Inc. The 3,300-subscriber system went for an undisclosed price. W. Randolph Tucker, president of United Cablevision, is a CATV pioneer who once ran systems for Fox Wells & Co., a New York investment firm. United Cablevision is backed principally by Hornblower & Weeks-Hemphill, Noyes, a New York investment firm that had been adviser to Ameco Inc. in its recent $12.1 million financing agreement (Broadcasting, July 19).

Other sales announced were of systems in Fallon and Yerrington, both Nevada; Saugus, Calif. (all owned by Ray Miller and George Acker); Neodesha, Kan. (owned by Cable TV Construction Co., Iola, Kan.); and Elk City, Okla. (owned by Community TV Inc.) to Western CATV Inc. Estimated price for all the systems is $1.7-2 million. They serve more than 5,500 customers. Western CATV Inc. is a wholly owned subsidiary of Narragansett Cable Corp., Providence, R. I. Narragansett had recently purchased the 6,000 subscriber system in Mankato, Minn., for approximately $2 million, and the 600 subscriber system in Monroe, La., for about $500,000.

Alvin H. Hartman, vice president of Narragansett, in addition to announcing his new acquisitions, was also one of four speakers at a Tuesday (July 20) session on "Finances, Taxes and CATV." Other speakers were William R. Putnam, vice president, Morgan Guaranty Trust Co., New York; James F. Ackerman, senior vice president, Economy Finance Corp., Indianapolis; and Ralph M. Fratkin, CPA and vice chairman of Philadelphia Tax Review Board.

Leon Papernow, who resigned last month as vice president of H&B American Corp., to form Community Cablecasting Corp. (Broadcasting, June 28), was announcing the availability of "$10 million cash and expert management.

There was lots of money in Denver last week.
rights are a problem. Suddenly the fixture of CATV—the attachment of its own lines to utility poles for a fee—is threatened. Telephone companies, both Bell and independents now are offering to supply the circuits needed for antenna cable operation, and in some cases are even offering the complete service to individual TV set owners.

Under the proposed revised copyright law, CATV operators would be liable for the payment of fees to copyright owners.

The group has some rays of sunshine too.

In the field of equipment, apparatus of sophistication equal in some respects to that used by broadcasters, has made its appearance.

Fundamental hardware has become more rugged, more durable, using solid state devices instead of vacuum tubes.

Devices for local origination, including an AP news wire ticker service, as well as the standard standby weather-time equipment, have all been upgraded and refined.

Serious exhibits showed the latest equipment for buried cable, a new and coming approach to CATV facilities installations.

Above all, there was a new concept prevalent in Denver. CATV seemed poised for its next big move—into broadcasting. Time after time, panelists and speakers urged cable owners to consider seriously the step into broadcasting, particularly in the low power UHF field.

And all over town, Denver sprouted signs and placards welcoming the “National Community Public Servants.” This, too, was the public theme of the convention.

FCC’s regulation plans blasted at Denver

FORD FIRES AWAY AT BROADCASTERS, COMMISSION, COPYRIGHT OWNERS

If there was a villain at the National Community Television Association convention it was the FCC.

Whenever the subject of federal regulation came up in the meeting halls of the NCTA convention in Denver protest followed protest. FCC’s jurisdiction and the specifications of it rules for CATV. It was made most clear at a panel on CATV’s problems.

Primarily two aspects of the FCC’s proposals were under attack: more than simultaneous duplication of broadcast television and the practice of bringing in distant signals and overlapping TV stations nearer to the CATV home territory.

Another target for the CATVers ire was also present at the NCTA convention. To the delight of hard core CATV operators, the new NCTA president struck out at broadcasters who are fighting the alleged encroachments of CATV. Frederick W. Ford, who took office as the paid president of NCTA in January, lashed out at those elements in broadcasting that want to keep CATV subsidiary to TV stations, and at the FCC which he said wants to hobble the cable antenna business with harsh regulation.

Problems-Solutions * A five-man panel, including two broadcasters, in a wide-ranging survey of CATV’s governmental and broadcaster problems, failed to come up with any solutions.

The broadcasters were Marcus Bartlett, Cox Broadcasting Corp.’s CATV chief, and George B. Storer Jr., president of Storer Broadcasting Co., which also has CATV interests.

Other members: Bruce Merrill, Phoenix, CATV manufacturer, owner of a group of CATV systems and of a microwave relay service; Max D. Paglin, Washington attorney and until recently general counsel of the FCC, and E. Stratford Smith, also a Washington attorney and special counsel to NCTA.

The panel was moderated by Sol Taishoff, editor and publisher of Broadcasting and Television magazines.

Mr. Bartlett called for a two-year moratorium on regulation while facts are gathered on such issues as CATV in big cities, CATV vs. UHF, “longhaul” microwave (bringing in TV signals from distant cities). He suggested the establishment of a “blue ribbon” government-industry committee to study the data and make recommendations to the FCC.

The result, Mr. Bartlett observed, “will be some changes for broadcasters and for CATV, but the public interest will be served.”

The CATV industry is not itself guiltless for some of its problems, Mr. Bartlett stated: It failed to establish good relations with broadcasters; it allowed the “pay TV” tag to be imposed on its activities; it failed to recognize the need for regulation before regulation was being forced on the industry, and it failed to “quench the myth” that CATV is a gold mine.

Mr. Storer noted that the foundation for broadcasting, CATV (and even air- lines—a reference to Storer’s investment in Northeast Airlines), is to provide service to the public.

The major issue, he said, is that there are people in the nation still not receiving TV in any form, or at most through boosters, which, he commented, provide “pretty bad pictures.”

Everybody, he said, should have at least one—three would be even better—TV services. Broadcasters have failed to provide this, he stated. But “somehow” something is going to take place to bring this about, perhaps through small stations, boosters, translators or CATV.

Unless broadcasters provide this service, Mr. Storer warned, it is “inevitable” that the government will regulate rates.

Case-by-Case * Mr. Merrill spoke against the imposition of blanket rules to govern CATV. It a broadcaster feels he is being hurt by CATV, Mr. Merrill said, let him prove it in a hearing before the FCC. After all, he added, the public interest is the primary issue.

Broadcasters, he stated, cannot be protected and escape utility regulation: “The broadcast industry cannot ask and receive a protected status, free from all competition for their viewers’ sets, and escape ultimate supervision of their profit rates . . .”

Mr. Paglin referred to CATV as the
"quiet revolution" in broadcasting. The public's willingness to pay for television, he said, is a straw indicating "a change in the existing order. . . ."

The FCC, he said, has failed to keep abreast of the technological and economic advances that have taken place in TV. It has failed to maintain its "expertise" in the field.

Mr. Paglin foresaw an "integrated" system of television by wire and by broadcasting. He also said that he can see a "marriage" of the skills of the broadcaster and the grass roots base of the CATV operator through the entry of the CATV owner into ownership of low-powered UHF stations. "As I see it," he said, "CATV will not for long remain solely an adjunct to television broadcasting [but will] soon develop as an integral part of the overall broadcast structure."

He also sees broadcasters moving into the CATV field.

"The growing demand for improved television service," he observed, "cannot be satisfied by the use of the radio broadcast spectrum alone . . . [American opinion] wants a broad scope and variety of television and other forms of programming."

Reception Service CATV Mr. Smith maintained, is a master antenna service which is not subject to FCC regulation.

But, he added, "the issue here is not now that of avoiding regulation. The issue is what the regulation should be. There seems to be common agreement that the public interest should be the goal of that regulation [but] the obvious difficulty is that there is relatively little agreement as between broadcasters and community antenna owners as to wherein lies the public interest."

The cable industry's problem with the FCC, Mr. Smith stated, is that the commission is "adamant" that it doesn't want to consider problems on a case-by-case basis.

The rules proposed by the FCC, Mr. Smith contended, "do not purport in the slightest to control the stations . . . they operate to restrict community antenna[s]. . . ."

CATV operators, Mr. Smith said, will have to engage in a grass roots campaign to let their congressmen and senators know their side of the controversy.

During a question and answer period panel members commented on:

- Revision of Section 325 of the Communications Act to require CATV operators to secure permission from originating TV stations—Not practical and it would "force CATV owners to their knees": it is a shortcut to pay TV. (Mr. Merrill). Would put control of CATV into the hands of the broadcasters: even review of a station's action by the commission would be suspect because the commission seems to be partial to broadcasters (Mr. Smith).

- Origination of programming—CATV should originate programs just as soon as equipment is available: but the origination should be public service programs—city council meetings, high school football games—not programs already available to public broadcasters (Mr. Bartlett). Separate CATV's reception function from its origination activities: in this way its "master antenna" operation would be immune to regulation while its "origination" practices could be federally regulated (Mr. Smith).

- CATV ownership of low powered UHF stations—Perhaps the FCC could encourage the entry of CATV owners into UHF station ownership by relieving those cable operators from duplication protection regulation (Mr. Smith). Perhaps the FCC might change the multiple ownership rules (which now limit a single entity to the ownership of no more than seven TV stations, of which not more than five may be in the VHF band) to encourage CATV operators and broadcasters to expand UHF ownership (Mr. Bartlett).

- Protection to local TV stations—CATV will "never submit" to more than simultaneous duplication protection (Mr. Merrill).

- Harris bill—Would halt "rush" by FCC to regulate CATV: it would specify that CATV is not a public utility (Mr. Paglin).

Wrong, Wrong Mr. Ford, the former FCC commissioner who was chairman of the commission for one year (1960-61), directed his harshest words at broadcasters.

Some "powerful" television stations, he said, which are promoting government protection of their economic interests "are wrong—in concept. Wrong in principle and wrong in their efforts to seek the government's protection by law and regulation of the status quo."

Protection means regulation and federal intervention for those seeking it, he warned. "When one acquires a monopolistic position in a free enterprise business," he said, "the government soon finds ways to regulate his business practices in order to furnish the stimulation which would otherwise be provided by competition, or to take action to provide that competition."

Levelling his attack on what was understood to be the position taken by some TV stations, Mr. Ford raised the question of local programming:

"Some of the most vocal broadcaster critics in this country, I am told," he said, "have no adequate local news programs on their own stations and they pay no attention to the needs of the local population which they were licensed to serve. They merely supply an outlet for programing originated elsewhere while their owners and managers travel around the country fighting CATV and bleeding in the claimed righteousness of their cause."

And, he continued: "... many television stations in single station markets have long since ceased to develop pro-
Spies in the enemy’s camp? Not so. Guests at the NCTA convention were National Association of Broadcasters chairman John F. Dille Jr., Communica-

tion of Broadcasters “was just a settlement”furthers the protection required to serve the public they serve.”

CATV, he stated, seeks no govern-
ment protection; in fact, he added, it “furthers [the government’s] objective of diversity in program sources.”

Fair Settlement • The proposed 1964 settlement with the National Association of Broadcasters “was just and rea-
sonable” for the broadcasters, Mr. Ford said, and “although restrictive and burdensome they were “not intoler-
able” for CATV. The NAB board re-

fused to approve its committee’s recom-

mendations last December.

The negotiations with the NAB’s Fu-
ture of Broadcasting Committee were calculated, Mr. Ford acknowledged, to avoid regulation of CATV by state legis-

latures—which were stimulated. Mr. Ford asserted, by “those economic interests” standing to gain the most from the status quo.

The FCC rules for CATV—imposed on microwave users and proposed for all CATV operators—“are grossly defi-
ing” he said, in meeting the purposes of the national policy seeking the greatest practicable diversity of television pro-

graming.

Only Congress, Mr. Ford said, “can now fashion the protection required to maintain an equitable balance between the television and CATV industries.”

CATV into Broadcasting • Mr. Ford urged cable owners to enter broadcast-

ing by applying for low power UHF stations in their communities. If CATV’ers become broadcasters, he cau-

tioned, they must carry their station on their cable systems. This will not only help UHF, he said, but will show Cong-

ress, the FCC and broadcasters that “we are more than willing to help in the realization of a truly nationwide, competitive broadcast structure—by be-

coming an even more integral part of that structure.”

Of the other objects of concern among cable operators in the regulat-
ary field were state moves to place CATV under public utilities commis-
sions as a common carrier, and the copyright issue.

Mr. Merrill discussed the utility situ-
ation in his annual report. Pointing out that only Connecticut has passed a law placing CATV in the utility classifica-
tion, Mr. Merrill noted that this law requires also that each CATV must pay 6% of its gross revenues to the state.

Twelve states, he said, have bills pending in their legislatures to make CATV a public utility. These are Idaho, Maine, Minnesota, Missouri, New Jersey, New York, Oregon, Pennsyl-

vania, Rhode Island, Vermont, West Virginia and Arizona. In other states, PUC agencies are considering whether to take jurisdiction: these are Nebraska, Nevada, North Dakota, Ohio, Okla-

homa and Pennsylvania.

“Until federal legislation” disposes of this issue, Mr. Merrill stated, “we can expect a continuous battle in many states.”

The copyright issue was mentioned by Mr. Ford in his luncheon address. Inweighing against “a number of the most powerful owners of copyrights,” he charged that they are imposing a double burden on CATV subscribers: the copyright fee is paid at the time the program is broadcast, he noted; re-
quiring CATV systems to pay again is a “double bite.” He termed this “in-

iquitous.”

Mr. Smith delivered a status report on the copyright threat, predicted that a court trial would be underway before the end of the year in the United Artist suit against the Clarkburg, W. Va., cable system. He ventured no estimate as to when the CBS suit against Tele-
prompter would come to court.

In his discussion, Mr. Smith voiced the belief that if the revised copyright law goes into effect, requiring CATV systems to pay royalties, this would conflict with the FCC policy ordering CATV’s to carry local stations. Be-

cause TV stations constantly change programs on short notice, he observed, it would be conceivable that the cable company would be carrying copyrighted material for which he had not re-

ceived permission or had not paid.

Second look urged on microwave renewal

Black Hills Video Corp. urged the FCC last week to reconsider and revise its order granting a conditional renewal for microwave stations used to serve four commonly owned community anten-

nna TV systems in Rapid City, S. D.; Victoria, Tex., and Dexter and Poplar Bluff, Mo.

In a petition filed Monday (July 19) seeking reconsideration and further hearing before the commission en banc, Black Hills said the renewals, which were granted July 2, are of such a limited nature “as to gravely injure and inevitably destroy” the company’s micro-

wave operations as well as the CATV businesses of its affiliated systems.

In renewing Black Hills’ licenses the commission imposed two conditions: that the company transfer out of the common carrier service by Feb. 1, 1966, and into a new proposed service, and that the carrier require the CATV’s it serves to protect local TV stations by carrying their signals and refraining from duplicating their signals for a 15-
day period (Broadcasting, July 5).

Black Hills, which has been unwill-
ing to afford nonduplication protection, as the commission’s interim policy re-
quired, urged the agency to modify its decision and grant its renewals in full and without any restrictive conditions.

In a separate action now pending be-
fore the federal appeals court in St. Louis, Midwest Video Corp., the parent company of Black Hills, is seeking to overturn the commission’s CATV rules (Broadcasting, June 28).
Okay, so we're a little ahead of schedule. The Braves won't make Atlanta their home until 1966, but in the meantime WSB Radio sports director Frank Stiteler is warming up the flagpole at new, spectacular Atlanta Stadium. Also in the meantime, WSB Radio is covering baseball thoroughly, just as the Voice of the South reports all sports first and factually for the fabulous Georgia market. It's another reason WSB Radio is the choice of listeners and advertisers alike.
Radio, one of the good things about America, sells

**ABC Radio Stations**

six of the best things about Radio
CATV: little cause for alarm

How CBS sizes up probable impact of cable growth on television broadcasting: normal increase in advertising volume will offset audience losses

A new assessment of CATV’s potential and its probable economic impact on broadcasters was released last week by CBS.

The appraisal was contained in a “white paper” prepared by the CBS Office of Economic Analysis and submitted by CBS to the FCC last Friday along with its comments on the commission’s proposed CATV rulemaking (see page 40).

The analysis explored the history and pattern of CATV growth and then concluded that:

- There is a “reasonable opportunity” for CATV to reach about 6 million families (10-12% of total U. S. population), whose on-the-air service from networks is not adequate because of distance or terrain, plus possibly 2 million more (3-4% of the population) who live in high-rise apartments in metropolitan areas. At least half of the latter group, it was noted, live in the New York area.

- If, however, CATV systems show that they can thrive in cities where on-air network service is “more than adequate” and apartment-house reception is no problem, then the CATV potential “far exceeds anything that we have talked about thus far and, in fact, much of the country could ultimately become CATV territory.” This would test the appeal of additional services, as opposed to improved quality of network service, in enlisting CATV customers.

CBS noted that CATV applications are pending in a number of such cities including Albany and Syracuse, N. Y., Galveston, Tex., and Philadelphia.

- In its analysis of probable economic impact of CATV on broadcasters CBS sided more with the moderate-impact conclusions of Dr. Martin Seiden, special consultant to the FCC (Broadcasting, March 8), than with those of Dr. Franklin Fisher, whose study was commissioned by the National Association of Broadcasters (Broadcasting, Oct. 26, 1964). CBS held that most of Dr. Fisher’s conclusions probably can be accepted as “roughly accurate,” but that they tend to “give an impression of much greater impact of CATV than is in fact the case.”

- Not only may Dr. Fisher’s estimates of CATV effects on broadcasters be “on the high side,” CBS said, but it probably will take one to five years or more for these effects to begin to be felt. In any case, according to the CBS analysis, television advertising’s normal growth rate, if maintained, should compensate for economic losses caused by CATV in most cases and still leave room for growth in station revenues.

Economic Effects: Statistical procedures indicate, CBS said, that Dr. Fisher’s figures were “quite precise” as to how much money a station would lose if its programs were not carried on the CATV system ($14,000 a year per 1,000 CATV subscribers among its viewers, if the station is the only one capable of being viewed over the air; $8,000 per 1,000 subscribers when it is one of two stations that can be viewed over the air).

But Dr. Fisher’s estimates of what the loss would be if the station’s programs were carried on CATV, with average duplication of its programming, are subject to “much larger” margins of error, CBS contended. Based on its own studies, CBS concluded that in a one-station market where the station’s programing is both carried and duplicated on CATV “an [economic] effect two-thirds as large as Fisher’s is probably a minimum estimate” and that “the true value” probably lies somewhere between that and Dr. Fisher’s estimates.

In addition, CBS estimated, stations get a plus when CATV enables them to reach viewers they couldn’t reach over the air: “In both one- and two-station markets a station annually adds about $4,500 to $5,000 in revenues for every additional thousand families now able to receive the station via CATV.”

In any case, CBS maintained, “it might take, say, three to five years for a change in an affiliate’s audience standing to be reflected fully in the relative network rate of the station. Similarly, national spot revenues of the station would probably not fully reflect changes in audience for a year or so. And local spending should take a very long time to react fully. As a consequence, changes in a station’s audience resulting from CATV penetration would be fully reflected in changing revenues only after a considerable period had elapsed.”

Impact Proportionate: CBS also cited “the persistent rise in advertising demand for television time.” The maximum impact on station revenues of CATV growth is proportionate (a 10 percentage-point increase in CATV penetration would result in a 10 percentage-point decrease in station revenues in one-station markets), CBS said.

“If we take this maximum impact and assume that all stations are faced with equal CATV growth, then an annual rise in television advertising expenditures of ½% would be enough to offset the effect on station revenues of the current rate of CATV growth.

“In fact, of course, CATV growth is concentrated in smaller markets, and the average annual percentage increase in CATV penetration in these markets is much higher. If, for example, we assume that nearly all CATV growth is in the smaller markets containing, say, 25% of U. S. television families, then the current rate of growth in these markets would be about two percentage points per year and a comparable rise in advertising demand would be sufficient for revenues to remain unchanged.

“More realistically, there are undoubtedly some smaller markets, currently undergoing rapid CATV expansion, where the current growth rate is much higher. Let us hypothesize a fairly extreme case, say a small, single-station market in which the CATV system, when complete, covers two-thirds of the population. Let us further assume that 60% of the population in the CATV’s coverage area become subscribers over a four-year period.

“Under these circumstances, 10% of the station’s covered population is converted to CATV status each year for four years. A 10% annual increase in demand for television time in this market would fully offset the effect on revenues of the growth of CATV, assuming no time lag in the effect of CATV growth. In a two-station market, where the effect of CATV on a local station’s revenues is only about one-fourth as great as in a one-station market, it would only take a 2 or 3% annual increase in television demand to offset this CATV growth.

“If we now add in the fact that there is a fairly substantial lag in the impact on the revenues of the CATV-induced changes in viewing patterns, perhaps
“Fonteyn & Nureyev... nothing short of fabulous!”

A beautiful new half-hour TV Special from Seven Arts

Behind the Scenes with the Royal Ballet

Seven Arts takes you backstage to see what really happens behind the scenes to generate this fantastic public and critical acclaim.

"Rudolf Nureyev stands out as one of the most electrifying male dancers of all time. If this were not enough, Nureyev has been further blessed with a classic partner—Dame Margot Fonteyn, long the reigning ballerina of the Western world." — TIME

"Margot Fonteyn & Rudolf Nureyev, a virtuosity that no pair alive can match." — LIFE

"Nureyev's flair for publicity, his discotheque frugging plus his Ed Sullivan TV show appearance and column exposure has made him the one everyone wants to see." — VARIETY

"All things considered, the Royal Ballet of England is probably the most satisfying ballet company in the world at the present time." — THE NEW YORK TIMES

BEHIND THE SCENES WITH THE ROYAL BALLET was recently filmed at Covent Garden in London during rehearsals for the production of "Romeo and Juliet" which was S.R.O. in its 16-city tour of the United States and Canada.

Sir Frederick Ashton, Director of the Royal Ballet Company, narrates this most timely and unique TV Special. Filmed in arrangement with the General Administrator, Royal Opera House, Covent Garden Ltd.

CATV: LITTLE CAUSE FOR ALARM continued

overall as much as three or four years, then a fairly modest rate of growth in television demand, say 6 or 7% per year in one-station markets, and much less in two-station markets, would fully compensate for the effects of CATV growth on an individual station under the given conditions.

"If we accept our earlier conclusions that the fully proportionate relationship derived by using the Fisher estimates directly is probably too large, then a five or six percent annual growth in such a one-station market would compensate for the effects of CATV and allow some room for growth in revenues. This rate of growth in market revenues is well within the general pattern of growth that the television industry has been experiencing.

"In other words, it will be only in rare cases that the rise in CATV will, in fact, be rapid enough and large enough in magnitude to cause an absolute decline in station revenues."

Seiden Errors # Although CBS agreed with the FCC's Dr. Seiden that the CATV economic impact on broadcasters is "moderate," it disagreed with some of his reasoning in reaching that conclusion and particularly with some of his views on advertiser buying practices.

The CBS report said: "Seiden is in error when he says that advertisers do not buy audiences; he also added that "as long as the rating services do their job properly, the growth of CATV will ultimately have an impact on station revenues, whether or not advertisers or agencies or anyone else knows what effect the CATV's are having."

"The true reasons for the modest impact of CATV thus far," CBS continued, "are the relatively small amount of penetration that CATV's generally have in any particular market and the considerable length of time necessary for the effects of CATV to work themselves out."

The analysis noted that Dr. Seiden had suggested that eventually small-market stations may be in danger of being passed-by by national advertisers electing to cover them through larger-market stations whose signals are carried into the smaller markets by CATV.

"In general," CBS said, "it is probable that CATV penetration in a station's coverage area would have to be quite high before advertisers would decide it would be worth their while to try to cover small-market stations from the outside and it is unlikely that we will get up to such percentages in the near future."

Size of CATV = In its "white paper" CBS estimated the CATV population at the end of 1964 at about 1,400 systems serving approximately 1.4 million subscribers and collecting some $75 million from them annually. Annual growth rate in the number of subscribers was put at about 15% over the past several years.

The "average" system was said to have 1,245 subscribers and charge them $4.42 a month, but the "overwhelming bulk" of CATV's were said to be "relatively small," with the "most typical" system having 200-300 customers and two-thirds of those studied having fewer than 1,100. Some 31 systems, or 3.9%, had more than 5,000, while 67 systems, or 8.4%, had no more than 100.

Among the established CATV systems the average carried five TV stations, which was also the number carried by 40% of the total. Some 20% carried four channels, 13% carried six, and lesser numbers carried through 10.

The average TV station carried on CATV was found to be about 80 miles from the system, but the largest number—about 36%—were more than 100 miles from the CATV on which they were carried.

About 250 of 1,300 CATV systems in operation Jan. 31, 1964, received microwave service.

Based on eight 1964 CATV sales on which details were known, CBS reported that CATV systems are selling at an average of about $300 per subscriber, although the range in these trades was from $220 to $343 per subscriber.

Assuming 1.4 million CATV subscribers, this would put the present market value of the CATV industry at about $420 million.

In assessing CATV's potential, the CBS study said that "as of the moment, the growth of CATV systems is essentially within the classic pattern of serving under-served areas, defining under-served as three-network service that is less than adequate because of distance or terrain. Metropolitan area apartment-house service is on the horizon but has not yet been tested. Other types of antenna service have been talked about and even applied for but seem to be somewhat further away. And their viability, it seems to us, is still subject to question."

CATV proposal splits networks

NBP, CBS oppose FCC jurisdiction, ABC gives blessing

CBS and NBC have decided to dispute the FCC's assertion of authority to regulate all community antenna television systems. But they appeared to be among the only major voices in the broadcasting industry to take that position. In comments due today on a new FCC proposal to extend to non-microwave CATV the rules adopted in April for microwave-fed CATV, the ABC, the National Association of Broadcasters and others in the industry are taking the position that the commission not only has but should extend jurisdiction over all CATV's to protect local television stations. The rules would require off-air CATV's to refrain from transmitting programs for 15 days before and after the local station carries them and to carry the station's signal on the cable.

CBS View = CBS contended that the FCC lacks legal authority to regulate non-microwave CATV but that, even if it had authority, it should not adopt the proposed rules because to do so would create artificial protection for broadcasting. The CBS comments were filed last Friday.

CBS, which took a similar position in opposing a ban on wired pay-TV, told the commission: "While it is possible that unrestricted and unregulated CATV may economically hurt the present system of broadcasting, CATV does not propose to use broadcasting spectrum space. And so, in the last analysis, whether the proposed rules be rationalized in terms of implementing the sixth report and order, or of preserving opportunities for local expression, or of protecting UHF, it seems to CBS that the concept proposed is essentially a concept of electronic tariff walls which would protect an existing and favored method of distribution from what is thought to..."
Call for Action on housing helped 20,000 New Yorkers without discriminating.

( Even against people in penthouses. )

A flood on the terrace can be just as disastrous as one in a basement. Wall ovens that smoke are just as soory in new buildings as in old ones. And since the overwhelming majority of New Yorkers everywhere listen to WMCA, the housing complaints phoned in to us are as varied as our listeners.

Of course, when Call for Action was organized, thirty months ago, it was in an effort to get action for the one million New Yorkers living in sub-standard housing. WMCA broadcast the Call for Action phone number all through the day.

Trained volunteers, organized by the station, manned the phones and assisted over 20,000 people with housing problems. Hundreds of WMCA editorial broadcasts exposed the snarled building inspection system that Call for Action learned about, demanding city action.

Are we saying that WMCA is a responsible station? Yes. But we are also saying that our vast number of listeners take their community seriously.

You see, people don't have to listen to serious music to be serious, responsible people. It would be irresponsible of us to think otherwise.

wmca turns people on.

(and all kinds of wonderful people turn on WMCA.)
CATV: LITTLE CAUSE FOR ALARM continued

be 'undesirable' or 'unfair' competition.

"CBS recognizes that there are, indeed, some novel aspects to the CATV competition. One is that CATV feeds parasitically on the very system which it may be threatening. . . . Second, CATV may hurt free broadcasting without the vote of a majority of the public which may be affected. This is because it is doubtful that CATV can economically furnish signals to sparsely populated outlying areas; nor can those members of the public who are economically disadvantaged pay for the necessary subscriptions. It is entirely possible, then, that a majority of the public in a given service area can, by subscribing, deprive a minority in the area who are served by the broadcasting licensee of the service of that station.

"Yet, strong and persuasive as these factors may seem to be, CBS cannot escape the conclusion that it is an unwarrantable policy for the federal government to intervene and abort the normal processes of the free competitive marketplace, to protect one group of businesses against the competition of another group."

Another Challenge — NBC planned to file its comments today and was expected to challenge FCC's authority, under present law, to regulate CATV where microwaves are not involved.

NBC reportedly planned to take the position, however, that all CATV systems should be regulated to the extent that any are, and that the FCC should ask Congress for authority to regulate all of them.

Actually, NBC was expected to say, FCC regulation should be relatively limited—and the need for it would be sharply curtailed if Section 325(A) of the Communications Act were amended to require that CATV systems, like broadcast stations, get permission from the originating station before picking up its signal.

Such an amendment and the normal economics of the business, NBC feels, would take care of leapfrogging, duplication and most of the other major problems.

ABC Position — The opposite view—that the commission has and should exercise jurisdiction over all CATV's—was expressed in comments filed or in preparation by ABC, the National Association of Broadcasters and others that have long urged the commission to take the position it has taken. The need for swift action to prevent damage to the development of independent television was a common theme running through their comments.

ABC not only said it "agrees fully" with the commission's conclusion on the jurisdiction question but that the commission should adopt an interim rule to bar CATV's from major markets.

The network said that, pending the conclusion of the rulemaking, the commission should prohibit the relay of the signals of a station beyond the station's grade B contour into a market where four or more grade A television services are allocated and where three are in operation or soon will be.

Storer Filing — A similar proposal is contained in comments filed by Storer Broadcasting Co., which also supports the commission's position that it has jurisdiction over all CATV's. Storer bases its view of the jurisdiction question on a Communications Act provision giving the commission authority over persons engaged in interstate communications by wire or radio.

Storer says the commission should bar the importation of distant signals by a big city CATV unless the cable can make a showing that the CATV competition would not impede the development of independent television stations in the market.

ABC said its proposed interim rule would serve three purposes—protect large markets for the development of UHF stations; serve notice on local officials that pending commission action on the CATV proceeding, they "should not rely. . . upon promises by those seeking franchises that they can necessarily carry the signals of distant independent stations" and prevent the "precipitous establishment. . . of wired-television systems so extensive as to provide the basis for a significant system of pay TV."

The commission, which suggested such a proposal in its notice of rulemaking, has imposed a virtual freeze on the granting of microwave-fed CATV's in major markets. Microwave applicants proposing to serve CATV's in large cities are required to make a showing that independent UHF's wouldn't be hurt.

The NAB, which also supports the view that the commission has authority over all CATV's, said that unless the commission asserts its jurisdiction and imposes some curbs on their growth, they will seriously impair the FCC's TV allocations plan.

Taft Rebuttal — Taft Broadcasting Co., another supporter of the commission's position, restated its view in an unusual manner. It cast its comments in the form of a point-by-point rebuttal of Commissioner Lee Loewinger's dissent to the commission rulemaking proposal. The commissioner held that the FCC should not act without a specific grant of congressional authority.

Taft asserted that the commission's duty is to resolve the jurisdictional question and act accordingly since a decision to await congressional action would in effect constitute "a decision against regulating CATV's."

"Inaction permitting CATV's to proliferate unchecked and unregulated," Taft said, "would produce irreversible changes in the system."

Westinghouse Broadcasting, planning to file its comments today, was expected to take the position that FCC has authority to regulate all CATV but that the commission should adopt rules to prevent the entry of out-of-town signals into markets served by—or soon to be served by—three grade A TV signals.

Westinghouse reportedly planned to tell the commission that the opportunity for a fourth service in many markets is UHF, that UHF needs to be encouraged, but that bringing in a fourth signal via CATV will discourage rather than promote UHF.

Civic groups ask FCC to follow court decree

Two Clarksburg, W. Va., groups, which successfully appealed an FCC decision approving the sale of the city's only TV station to a company owning the local community antenna TV system, have urged the commission to abide by the court's order calling for a hearing, despite the company's subsequent disposal of its CATV properties.

The action was sought last week by the Citizens TV Protest Committee and the Clarksburg Publishing Co. They had asked the Washington Court of Appeals last March to rescind a commission order, issued a year earlier, granting the transfer of WBOY-TV Clarksburg to Fortnightly Corp. (Broadcasting, March 16, 1964).

Fortnightly, at the time it purchased the TV station from Rust Craft Broadcasting Co., also owned CATV systems in Clarksburg and Fairmont, W. Va. The federal court in May set aside the FCC's consent to the sale and remanded the proceeding for further hearing to determine, in effect, if the transfer should have been approved in view of Fortnightly's local CATV ownership (Broadcasting, May 10).

The current motion by the two Clarksburg groups stems from a July 13 letter from Fortnightly's Washington counsel and directed to John H. Conlin, the commission's associate general counsel. The letter asks that the commission issue a final order affirming Fortnightly's purchase of WBOY-TV and terminating the proceeding.

Agency profits rose in '64
AAA study shows they are higher than any time since '56

The rate of advertising agency profits, which has slipped more than it has risen over the past decade, advanced in 1964 to its highest point since 1956, the American Association of Advertising Agencies reported in a 10-year analysis last week.

Net profits (after taxes) of 234 reporting agencies of all sizes averaged 4.76% of gross income (total receipts from media commissions, service charges and fees). The comparable figure in 1963 was 3.7%; in 1956 it was 5.19%, and the year before that it had been 5.51%.

For incorporated agencies, which represent about 88% of AAAA membership and whose figures were considered by AAAA authorities to be generally more realistic, the after-tax profit average in 1964 was placed at 4.23% of gross income, compared to 3.04% in 1963, 5.02% in 1956 and 5.06% in 1955.

As a percentage of total sales or billing (total amount billed to clients for time and space and for outside purchases and inside services), after-tax profit of incorporated agencies in 1964 amounted to 83/100ths of 1%. as against 55/100ths of 1% in 1963, 88/100ths of 1% in 1956 and 89/100ths of 1% in 1955.

For agencies as a whole, total payroll in 1964 averaged 67.01% of gross income, compared to 67.99% in 1963. The 1964 payroll figure was the lowest in the 10-year period, down from a high of 70.3% in 1958, but AAAA officials stressed that this did not mean the dollar payroll had declined. The dollar payroll increased, they said, but gross income increased at a higher rate.

Payments into pension or deferred profit-sharing plans increased from 1.63% of gross income in 1963 to 1.98% in 1964. The previous high in the 10-year period was 1.42% in 1956. In addition, insurance for employer benefit increased from 0.70% in 1963 to a 10-year high of 0.76% in 1964.

Total expenses were 93.62% of gross income in 1964, compared to 94.63% in 1963. U.S. income tax was 1.62% last year as against 1.67% in 1963. Among incorporated agencies the U.S. income tax average was 2.13% in 1963 and 2% in 1964.

AAQA officials said the 234 agencies in the 1964 report handled "close to two-thirds" of all U.S. advertising agency billing.

RAB executives discuss expanded operations

BAR estimates for 18 markets

Estimates of the dollar volume of nonnetwork television business on the air in 18 U.S. markets during the week ended July 9 are reported herewith as compiled by Broadcast Advertisers Reports. The estimates are based on monitoring, using discounted-rate formulas.

Numerals in parentheses immediately following the market name indicates the number of stations monitored. Dollar figures are for amounts received by stations, before commissions and are BAR's estimates of all national spot, regional and local business on the air during the week indicated.

TVB rebuts
'Spot Life'

The Television Bureau of Advertising last week reviewed the "Spot Life" concept of advertising being introduced by Life magazine, and came up with a highly unfavorable notice.

TVB's commentary was spiced by such phrases as "false face," "tugging at broadcast media's coat tails" and the "mask of 'Spot Life'."

Harvey Spiegel, TVB vice president and research director, who issued the analysis, claimed there is no similarity between the Life plan and spot television, and added:

"Wrapping magazine advertising concepts in spot terminology only reveals the plight of magazines' efforts to woo back former magazine advertising budgets. Magazines keep trying to look like television in the eyes of the advertisers, but the impression can never materialize."

He contended that the Life plan can-

More room for Audience Studies Inc.

Audience Studies Inc., a subsidiary of Screen Gems that pre-tests TV programs and TV and radio commercials as well as printed advertising, is adding another floor (14,000 more square feet of office space) to its new building currently under construction in Hollywood.

Pierre Marquis, vice president and general manager of the audience and advertising research organization which also has sales offices in New York and in Chicago, said enlargement was necessary before completion of the original design because of personnel and equipment added since plans first were approved in June of last year. Since that time, he indicated, there has been a steady increase in business, most of it in the commercial pre-testing area.

ASI also claims to conduct more than 80% of all independent TV program pre-testing in the U.S., and services major motion-picture companies and independent film producers.

The new building will house automated equipment, closed-circuit TV systems and a theater among other facilities. ASI also has Audience Studies Ltd. in England. ASI plans still other foreign organizations, operating this fall in Tokyo and in Sydney, Australia. The new ASI building has a 150-foot frontage on Sunset Boulevard. Its designer is Arthur Froelich and Associates.

TVB rebuts
'Spot Life'

The Television Bureau of Advertising last week reviewed the "Spot Life" concept of advertising being introduced by Life magazine, and came up with a highly unfavorable notice.

TVB's commentary was spiced by such phrases as "false face," "tugging at broadcast media's coat tails" and the "mask of 'Spot Life'."

Harvey Spiegel, TVB vice president and research director, who issued the analysis, claimed there is no similarity between the Life plan and spot television, and added:

"Wrapping magazine advertising concepts in spot terminology only reveals the plight of magazines' efforts to woo back former magazine advertising budgets. Magazines keep trying to look like television in the eyes of the advertisers, but the impression can never materialize."

He contended that the Life plan can-

Winning Combination

FOR THE PAST THREE YEARS WGN-TV news cameramen have won the Grand Award and other honors presented annually by the Chicago Press Photographers Association. The winners line up to be congratulated for consistent, outstanding performance in the coverage of Chicagoland news. From left: Ed Sullivan, Grand Award winner in 1962; Charles Ray, Grand Award winner in 1963; and Roger DeWert, who captured the coveted major trophy in 1964.

GARY PARK AND JIM RUDDLE, WGN-TV’s news reporting team featured nightly on “Park-Ruddle News” (5:45 and 10), thank the men behind the news cameras who provide consistent award-winning coverage. Park and Ruddle, and the news cameramen, are all part of a 35-man news department dedicated to keeping the vast Chicagoland audience on top of the news. WGN-TV presents more award-winning news footage in Chicago than any other television station!
not provide market-by-market coverage and cited these reasons:

- Under spot TV, an advertiser can pick the markets he wants, including any single market. There’s no minimum number of markets and there’s no need to buy a combination of markets to qualify. Since the basic requirement in “Spot Life” is a minimum circulation of 750,000, an advertiser cannot use the plan in any single one of 19 of the 20 markets offered.

- Life claims at least 34% reach in these markets. This includes “barber shops and beauty parlor readers and audiences that take up to six weeks to accumulate.” At best, this is “audience” to the magazine and not “audience” to the advertiser’s selling message.

- Life’s full national circulation can be bought for $7.34 cost-per-thousand. For advertisers who don’t market nationally, however, the minimum can be bought for $9.36 cost-per-thousand, a 31% premium. Buying all 20 markets in “Spot Life” costs $8.33, a 14% premium. “Spot Life” delivers 4 million circulation in areas that contain 25 million TV homes (“Is this penetration?” Mr. Spiegel comments).

- For the cost of buying this 4 million circulation, an advertiser can buy at least two prime-time TV spots in each of these markets and get “well over twice the number of Life homes in these 20 markets.”

Xerox’s documentary accepted by CBS-TV

The Xerox Corp., Rochester, N. Y., and CBS agreed last week to telescast The Making of the President: 1964 on CBS-TV on Oct. 19 at 9:30-11 p.m.

The decision marked a departure from CBS’s practice of not accepting outside new productions for broadcast and also a reversal of Xerox’s plan to carry the program on a national spot lineup.

The advertiser had elected to carry the program on a spot basis in the week of Oct. 25, after noting that no network time period could be found and specifically that its discussions with CBS-TV had been terminated (Broadcasting, June 21). Donald L. Clark, Xerox vice president in charge of corporate advertising, had said that CBS-TV had accepted the program but that the advertiser and network failed to reach agreement on such details as local tie-ins with Xerox branch offices, on-the-air promotion and newspaper advertising.

CBS-TV, however, said it had offered time periods it considered acceptable to the Xerox agency, Papert, Koenig, Lois, New York, but indicated that Xerox and the agency apparently decided not to accept the time periods.

Mr. Clark in a statement last week said that the telescast being on CBS “together with the promotional plans we have developed, will provide us with the widest possible audience.” Xerox has not been on CBS-TV in three years, Mr. Clark noted.

CBS News said it approved the final version of the program under its policy of complete editorial supervision. Fred Friendly, CBS News president, also said that CBS had wished at the time The Making of the President: 1960 was telecast on ABC-TV last year that the program “might have been carried under the CBS News banner.”

A Xerox spokesman affirmed last week that the initial falling out with

CBS came when the advertiser and network failed to reach an agreement on "enough promotion which Xerox felt the program deserved" but that a pact was made when promotion needs were "figured out."

Both the 1960 special and the new show are David L. Wolper productions.

Business briefly . . .

Campbell Soup Co., Camden, N. J., through Needham, Harper & Steers, Chicago, for its Campbell's Pork and Beans and V-8 Cocktail Vegetable Juice products will participate extensively in CBS Radio's *Dimension* and CBS News programs, beginning Aug. 23. Split-week participations are scheduled for each product at the rate of 35 commercials per week. The Pork and Beans campaign begins Aug. 23 and is slated to continue through July 11, 1966, while the campaign for V-8 begins Sept. 6 and ends June 27, 1966.

The Fanta Beverage Co., division of The Coca-Cola Co., Atlanta, will testmarket a new low-calorie drink, Fresca, in Providence, R. I., Seattle and Tacoma, Wash. The campaign will include spot television.

Carling Brewing Co., through Lang, Fisher & Stashower, both Cleveland; R. J. Reynolds Tobacco Co., Winston-Salem, N. C., through William Esty Co., New York, and B. F. Goodrich Co., Akron, Ohio, through BBDO, New York, will sponsor *The Carling World Golf Championship* on CBS-TV on Saturday, Aug. 21 (5:30-6:30 p.m., EDT) and Sunday, Aug. 22 (4-5 p.m. EDT).

House of Ideas, Spencer, Ohio, through Lang, Fisher & Stashower, Cleveland, is planning a television pre-Christmas campaign for three new children's toys. Stations in Chicago, Detroit and Cleveland will be used.

United Motors Service Division of General Motors Corp., through Campbell-Ewald Co., Detroit, will sponsor ABC Radio coverage of 32nd annual College All-Star Football game from Chicago, Aug. 6, starting at 10 p.m. EDT.

Coffee group names McCann-Erickson

The recently formed U. S.-Canada Technical Committee of the World Coffee Promotion Committee, New York, after hearing presentations from five major agencies (*Broadcasting*, June 28), last week appointed McCann-Erickson, New York, as advertising agency for a $3 million advertising campaign to promote coffee drinking in this country and Canada.

Advertising plans have not been set, but it was said that radio-TV would be strongly considered in the campaign expected to begin around Oct. 1.

The technical committee represents members of the Pan-American Coffee Bureau, the National Coffee Association and the Inter-Africa Coffee Organization, all located in New York.

Agency appointments . . .

- Deluxe Laboratories, New York, has appointed The Chalmers Co., Beverly Hills, Calif., to handle advertising and promotion for the parent organization and also for its General Film Laboratory division in Hollywood. David E. Johnson, vice president of the agency, will supervise the account.
- Wham-O Manufacturing Co. has named Hixson & Jorgenson, Los Angeles, to handle advertising for its line of toys, including Frisbee Flying Saucer, Monster Bubble and Air Blaster. Participations in children's TV programs will continue to get the major portion of Wham-O's $1 million budget. At HJH, H. D. Walsh, senior vice president, will be account supervisor for Wham-O; Richard L. Bower will be account executive. Under consideration is a test campaign for the Hula Hoop, to see whether this original Wham-O product can regain some of the popularity it had a few seasons back.
- The Robert A. Johnson Co., Milwaukee, has appointed Carl Ally Advertising, New York, for its cookie, dessert specialty and institutional food products, replacing Campbell-Ewald, Detroit. A spot-TV campaign is tentatively planned for the account, which annually bills approximately $800,000.
- Family Record Plan has named Honig-Cooper & Harrington, Los Angeles, to handle its $200,000 account. Company is a direct selling organization offering parents a portrait album extending over the early years of each child's life, with sales of over $11 million last year. Consumer advertising has been placed in magazines in the past, but plans call for TV to be tested. FRC is also testing a second sales pro-
ANSWER MA'AM

What are the structural characteristics of organic soaps? What is the minimum daily intake of water needed to sustain the human system? This Research Laboratories librarian at the General Motors Technical Center has the answers . . . or she'll find them. By background and training, she is well qualified to handle the more than 7,000 complex inquiries that come to the Research Laboratories library every year—not only from GM Technical Center personnel but from manufacturing divisions as well. Her credentials include a Master's degree in Library Science and years of practical experience.

The job of people in research is to explore the unknown. But the usual first step in any project is to find out all about what is known. Here is where the librarian goes to work. She looks, digs, discovers . . . and delivers all the available data, all the background material.

There are some 78 librarians and assistants in 22 GM libraries across the country. Their education, training and experience make them important people at General Motors.

making better things for you
program, the American Incentive to Read, a phonics reading program for children and adults. Radio and newspapers are the media being used during the test period.

- Excelsior Shirts Co., division of Kayser-Roth Inc., New York, has appointed Allman, Stoller, Chalk, that city, as its advertising agency, replacing Daniel & Charles, New York. Advertising plans have not been formulated.

- Lee Tire & Rubber Co., Conshohocken, Pa., has appointed Wyse Inc., Cleveland, which plans a new promotional program for the new Lee line of automobile, truck, farm, off-the-road and industrial tires.

- Daitch Crystal Dairies, New York, operators of a chain of 104 Daiteh-Shopwell supermarkets in New York and Connecticut, has appointed Mogul Baker Byrne Weiss, New York, on a fee basis. Daitch, which had previously handled its own advertising, estimated at $750,000 yearly, plans an extensive radio campaign in the New York area.

- Liggett & Myers Tobacco Co., New York, has appointed J. Walter Thompson, there, to handle advertising in Puerto Rico for L&M, Chesterfield and Lark cigarettes. JWT replaces West Indies Advertising Co., San Juan, P. R.

**Rep. appointments**

**Chicago festival includes TV**

Television film commercials have been included as a category of the newly proposed Chicago International Film Festival scheduled in that city Nov. 4-13 by its founder and promoter, Michael J. Kutza Jr., a freelance artist who has done some 16mm camera work for WGN-TV Chicago. Fairfax Cone of Foote, Cone & Belding is among agency representatives who will judge entries due Aug. 15. TV entry fee is $50. Prizes in all film categories total $10,000. Festival headquarters: Room 306, St. Clair hotel, 162 East Ohio Street, Chicago.

**Country Hall of Fame compiles record album**

Country Hall of Fame, through Martin Gilbert Inc., Los Angeles, is preparing a year-long radio-TV campaign using one million broadcast commercials to advertise a record album made by 25 top recording artists in the country music field. The artists, the various recording companies, the music writers, composers and publishers have all waived their royalties in the new album, titled "Famous Original Hits," so that proceeds may go to the Country Music Association, a national organization.

Martin Gilbert, who is president of Country Hall of Fame, which is producing the album, as well as head of the agency handling its distribution and advertising, said that he has made a donation of $25,000 to CMA and has given that organization a royalty guarantee of $85,000 for the album. Sales will be made by mail, Mr. Gilbert said. With orders generated from 7,000 TV spots a week on some 300 stations and 35,000 radio spots a week on about 500 stations. Most of the time will be bought outright; some will be placed on a per-inquiry basis.

A continuous visual news service for community antenna TV systems, using the radio-news wire reports of The Associated Press, was previewed last week for delegates to the National Community Television convention in Denver.

The service, to be sold by the AP through its subsidiary Press Association, evoked major interest at the convention—and at the same time aroused the resentment of a number of radio broadcasters who saw the service as competing head-on with radio news.

Though the 24-hour daily service is visual, not aural, it presents for the viewer the full AP broadcast report as it comes over the wire.

Press Association buys the special equipment, used in the service, from Telemation Inc., Salt Lake City, and installs and maintains it as part of its service to CATV clients.

AP officials in New York said the service, called "News Channel" is being offered in response to requests by broadcaster and newspaper owners of CATV systems. It is being offered by Press Association because that subsidiary deals with clients who are not AP members.

Starting in September, AP broadcast membership executive Fred Strozier, who also holds this post with Press Association, said the subsidiary expects the first operations of News Channel to be underway by Sept. 1, at which time, be said, the client total "may be as high as 10."

AP authorities indicated that News Channel contracts would be for the usual five-year term with the charges based on several factors including market size and possibly the number of CATV connections.

Although the AP refused to disclose prices for this service, it was learned it is charging the rate it would charge for a station in a comparable market. This fee runs, it's understood, from $87.50 to $125 a week, plus a $20 weekly charge for the printer-scanner. In addition, there is said to be a line-haul charge.

The new service has been tested over the past couple of months in Miles City, Mont., where Micro-TV Inc. operates a community antenna TV system (Ian A. Elliott is president and general manager. He is also general manager of KATL, Miles City).

According to Associated Press spokesmen, principals in the Miles City operation (Mr. Elliott and Robert J. Scanlan, publisher of the Miles City Star) believed the report well done and found most viewers enthusiastic and quite favorably disposed. From the newspaper publisher's point of view, it was said, "people are made more news conscious and the reports do not interfere with other news services in the community."

Radio, Too? AP officials intimated that the publisher viewpoint was germane in light of reported radio broadcaster discontent—though they said they hadn't heard of it last week—in that initial fear of competition would prove unfounded as the service becomes an adjunct to, and not a substitution for, existing news media.

A National Association of Broadcasters source noted that many broadcasters, particularly those in radio, appeared "very unhappy," viewing the development "as another step in the direction of origination" by CATV operators.

But AP executives in New York maintained that the news service had been designed for CATV operators who are not originating entertainment or news programming and that the technique
was designed to simplify operation.

A United Press International spokesman told Broadcasting that it had experimented with "similar devices on several previous occasions" in Arizona, California and in Florida.

"The problem appears to be lack of viewer interest in watching a Teletype machine for any length of time," the UPI spokesman added. UPI, he said, takes the position that Teletype machines are available from the news organization and camera equipment also is available "from any number of sources and UPI is ready to aid any broadcaster in such a project."

In the AP technique, a camera device is installed that "reads" news copy as it is printed by the newswire machine. The news file will be the regular service provided stations by the AP broadcast report.

Large Type - The characters on the page are printed larger than those by the conventional newswire Teletype used in radio and TV station newsrooms and in newspaper offices. The machine for CATV's is modified to give about 37 characters per line, or about half the number the ordinary Teletype prints across the paper.

A keying device can be triggered by a central operator to move the camera's focus away from the matter being sent.

When this is done the camera trains automatically on the last news summary sent. The camera remains in that position, repeating coverage of the summary until keyed to return to what is being run on the machine.

Such substitutions are planned for those times when advance news copy is being sent for later release, for market listings and for other tabulated material not easily read or understood.

The broadcast wire on weekdays regularly feeds stations with five-minute world news summaries some 22 times in a 24-hour period weekdays at five minutes to the half hour, and about 20 times on the half-hour on Sundays; spot summaries, preceded by headlines, hourly before the half-hour (except after the expanded five-minute summaries), and regional news for a like frequency, in 5-minute and 10-minute or longer summaries over the 24-hour period, usually following or bracketing the world news summaries. In addition, the wire service regularly provides market and business news, weather summaries and features, sports, features for women, commentary and analyses and special reports.

At present, there are no plans for audio feeds to accompany the video presentation of news. But AP officials noted that some CATV's envision the playing of music tapes or other sound effects.

**Equal time for debt adjusters**

FCC says KTLN hasn't lived up to fairness doctrine; reminds WGCN fairness doesn't mean purchased time

If a business is legal—and a controversial issue of public importance—broadcasters can't attack it without affording a spokesman for it time for reply.

The FCC made the point last week in holding that KTLN Denver had violated the fairness doctrine when it refused to make time available to a representative of the debt-adjusting business.

And, in another fairness matter, the commission issued a reminder that broadcasters can't meet their obligations under the doctrine if they make time available for conflicting views exclusively on a paid basis.

In the KTLN case, the station had broadcast a series of programs entitled The Gogers that was sharply critical of the debt-adjusting business, and had rejected a request for time for reply by one of the credit-counselling firms in Denver.

KTLN, according to a letter to the station that the commission made public, had argued that debt adjusters "were no more entitled to broadcast time than dope peddlers." It also said, the FCC related, that "if the commission requires that time be given 'to people engaged in what are obvious racket,' it will open the airwaves to the criminal and near-criminal element."

**Issue of Importance** - The commission said that following the station's series on debt-adjusting a bill to outlaw the business was introduced in the state legislature but was later amended to provide for regulation of the business. It was passed in that form. The bill indicates the subject is a controversial issue of public importance, the commission said.

And in presenting its views, the commission added, the station broadcast "personal attacks on the honesty, character and integrity of those engaged in the debt-adjusting business in Denver."

Under the circumstances, the FCC added, a spokesman for the business should have been given an opportunity for reply. "Debt adjusting, evidently a lawful activity in Colorado . . . cannot be equated with the unlawful activity of dope peddling or with other criminal offenses," the commission said.

Red Lion - The reminder that broadcasters may sometimes have to make time available at no charge in order to meet their obligations was contained in a letter to the Rev. John M. Norris, licensee of WGCN Red Lion, Pa.

The station had been the object of a fairness doctrine complaint filed by the Democratic National Committee, but the commission declined to pursue the matter because the committee had not responded to an offer to buy time (Broadcasting, July 19).

But, the commission, in a letter to the station that it made public, said the station's position raises questions as to whether it is conforming to the

**Other program gear for CATV's**

The digital-computer revolution came to CATV last week at the National Community Television Association convention when Ameco showed the first direct readout system for time-weather operation.

The device, called the "WeatherMatic," is an electronic visual display system for automatic programming on CATV, giving time, weather, wind direction and velocity, humidity and pressure. Weather data is gathered from sensors mounted on rooftop or mountain top, and conveyed to the readout cabinet for direct TV camera pickup for transmission on a special channel. Price is $8,000.

An additional unit for the display of news and other information is also available for $12,000-$14,000. That price covers a color conversion unit.

Other origination equipment shown at the NCTA meeting:

Sony showed its PV-120 U professional portable tape recording machine. Telemation featured an Ampex VR-660B at $12,500.

Various weather-time devices were shown.

Spencer-Kennedy Laboratories Inc., Boston, showed its fixed TV camera console which provides time-weather and public service notices through the use of an optical diplexer. Telemation Inc., Salt Lake City, showed its TMW-2B weather channel, and its junior grade "J.G." TMW-5.

R. H. Taylor Co., Wellington, Tex., showed Weather-Scan, Tri-Scan, and Roto-Scan, and Industrial Electronics Systems Inc. showed its Tele-Weather.

Prices ranged from $3,500 to $5,000.

Broadcasting, July 26, 1965
Republicans on TV: Soon ‘scarce as hen’s teeth’?

In response to a suggestion by FCC Chairman E. William Henry, Representative Catherine May (R-Wash.) offered evidence last week to support her charge that Republicans are short changed on major TV network public affairs programs.

For the first six months of this year, she said:
- CBS has presented only one Republican and 14 Democrats on its major public affairs program, *Face the Nation*.
- NBC has presented five Republicans on *Meet the Press*, compared to 12 Democrats, and its *Today* show has been running 3 to 1, Democrats to Republicans.
- ABC's *Issues and Answers* has presented six Republicans and 19 Democrats.

Representative May first raised the issue at the June 17 convention of the Maryland, District of Columbia, Delaware Broadcasters Association in Rehoboth Beach, Del. She said then that "if the trends continue, Republicans on television will be as scarce as hen’s teeth.” Something like Newton Minow's (former FCC chairman) proposal for four hours of prime time allocated to each major party the month before election day would, she observed, leave that month "in excellent hands. But . . . it is the 47 months that follow an election about which I am concerned."

Chairman Henry Replies - Later, Mr. Henry was asked by Metromedia Vice President Mark Evans during a Metromedia-wwtg(tv) Washington production of *Opinion in the Capital* if he was interested in Mrs. May’s charges.

He replied: "Well, not as such. We have a policy that says when you get into controversial issues, you've got to be fair about it. If you put on one side, you've got to put on the other, or you've got to make an effort to put on the other."

Mrs. May, a veteran radio news broadcaster herself, said she was not trying to embarrass Mr. Henry or criticize the broadcasting industry, but she is concerned over the "near silence imposed on Republican views . . . ."

She added that she is not talking about editorializing, which she favors, or regular news programs, but only the "opinion making" public discussion shows.

fairness doctrine. WOCA carries nine sponsored programs dealing with controversial subjects but has a general policy of making time available for conflicting views "only upon a paid basis," the commission said.

"Such a policy," the FCC said, "is inconsistent with the public interest," adding WOCA has the choice of presenting the controversial programs and has "the right to attempt to encourage presentation of conflicting viewpoints on a sponsored basis."

But, the commission said, "you cannot reject programming—otherwise suitable to you—solely on the ground that it is not sponsored, where you have not presented and do not plan to present the conflicting viewpoints in other programming. The paramount consideration is the public interest in an informed electorate—not the private interest of insistence in all events sponsorship."

The commission first enunciated that position two years ago in a case involving two Alabama stations (Broadcasting, Sept. 23, 1963).

CBS Radio shifts program schedule

CBS Radio last week announced several changes in its programming, all effective in the week of Aug. 9.

*The World Tonight*, a weekday news analysis program, will move from 8-8:15 p.m. EDT to 7-7:15 p.m. EDT, replacing *CBS Evening News*. In order to allow a 50-minute block of network news, sports and information programs, *The World Tonight*, will be offered stations as network optional time in place of *CBS Evening News*, which now goes to stations at local option. All other programs in the block are offered as network optional time.

Marvin Kalb will replace Alexander Kendrick as correspondent on *The World Tonight*, and on Aug. 9, Mr. Kendrick will begin a new weekday news series at 5:30-5:35 p.m. EDT.

Also on weekdays, *CBS Network News With Steve Rowan* begins on Aug. 9 at 8-8:10 p.m. EDT. In other changes, all beginning Aug. 14, *Saturday News* at 1 p.m. EDT will be extended from 5 to 10 minutes; *Drees on Sports*, featuring Jack Drees, moves from 1:05 to 1:10 p.m. on Saturdays, while the *Saturday News* at 5 p.m. will be extended from 5 to 10 minutes.

Directors OK merger and new contract

The membership of the Directors Guild of America has approved a new contract with the TV and radio networks and a merger agreement with the Screen Directors International Guild. DGA President George Sidney said Monday (July 19) at a news conference at the guild's headquarters in Hollywood.

The contract with the networks, a four-year agreement retroactive to Jan. 1, calls for a 5% increase for TV freelance and staff directors and another 5% increase on Jan. 1, 1967. The agreement also gives directors greater creative control over the programs under their direction and forbids direction by network executives. Other clauses give DGA jurisdiction over pay television, for both home and theater exhibition, and over satellite broadcasts as well. The pension plan was extended to cover NBC employes and is now applicable to work done under the videotape code.

The merger with SDIG, which has been discussed intermittently for eight years or longer, will add about 500 members to DGA's present membership of about 2,650, Mr. Sidney said. SDIG has approximately 550 members, but 48 of them are already members of DGA. The balance will receive membership applications for DGA membership and the merger should be completed in about 90 days. SDIG, New York based guild whose members have worked chiefly in the field of commercial and industrial films, will move its offices into DGA's New York quarters and will dissolve its own organization.

WIBW clears bridge area after collapse

Votes of confidence for media access to disaster areas have followed a bridge collapse and the subsequent radio-TV coverage in Topeka, Kan. Following failure of a span over the Kansas River in central Topeka swepting at least one and possibly several autos into the current, WIBW-AM-FM-TV Topeka rushed news teams to the scene.

Intensive reporting and frequent interruptions of regular programming by WIBW proved an invaluable service toward informing citizens, and in turn clearing the curious from the disaster area, authorities said. With live audio reports on radio and TV within 15 minutes and live cameras within two hours of the collapse, the stations provided information more complete than most individuals felt they could have gotten on the scene.

"There are many who feel that this type of coverage encourages crowds . . . but in this instance it had just the opposite effect," observed Thad M. Sandstrom, VP and general manager of the stations. Appreciation from Mayor Charles Wright of Topeka continued, "there is no question . . . but that your mobile equipment . . . greatly assisted us on advising the public . . . as well as informing the public to stay clear . . . to facilitate recovery efforts."

Reruns vs. new shows in a.m. schedules

A sharp difference in programing approaches was pointed up last Thursday (July 22) in separate announcements from CBS-TV and NBC-TV on changes in their morning schedules. CBS-TV is banking on re-run programs of network favorites in this period, while NBC-TV is relying on original series, primarily in color.

Effective Aug. 16, CBS-TV is adding selected replays of The Dick Van Dyke Show (which continues as a prime-time program) in the daily 11:30 a.m.-12 noon period. Continuing in the Monday-through-Friday morning slots on CBS-TV will be reruns of network staples: I Love Lucy, 10-10:30 a.m.; The McCays, 10:30-11 a.m.; Andy of Mayberry (retitled Andy Griffith Show episodes), 11-11:30 a.m.

NBC-TV reported it is adding four new color series to its morning lineup and is presenting a complete schedule of original (no re-run) shows. Changes are effective Sept. 27. Its new lineup on Monday-through-Friday is Fractured Phrases, a new game show in color, 10-10:30 a.m.; Concentraison, 10:30-11 a.m.; Morning Star, new dramatic series in color, 11-11:30 a.m.; Point Paradise, a new drama series in color, 11:30 a.m.-12 noon; Jeopardy, 12 noon-12:30 p.m. in color, and Let's Play Post Office, a new game show in color, 12:30-2:35 p.m.

WINS news format scores with adults

A representative group of advertisers and agency executives, briefed last week on Westinghouse Broadcasting's WINS New York all-news format, were told of a broadening appeal to adult listeners. The station converted from popular music to full-time, round-the-
clock news three months ago (Broadcasting, April 19) and Westinghouse's KYW Philadelphia is set to go to all-news later this summer (Broadcasting, June 21).

Joel Chaseman, wins general manager, cited a Trendex study of New York radio listening which he said indicated the station has moved to third position among stations there with appeal to adults (18 years and over) as a group.

Southerners prodded on civil rights

An aggressive eastern civil rights broadcaster last week urged southern stations to take a stronger editorial stand on racial issues, but admitted such boldness must be tempered to the local circumstances.

Speaking before Northwestern University's National Broadcast Editorial Conference at Evanston, Ill., David C. Horowitz, director of public affairs at WMCA New York, also praised a number of southern stations that have already "stuck their necks out" successfully on civil rights subjects.

Those he singled out included WDSU-TV New Orleans, WTVJ(TV) Miami, WTAR Norfolk, WSAC Fort Knox, Ky., and WSU and WAGA, both Atlanta.

Hoping that broadcasters in the Midwest, the South and the Southwest would venture more boldly into the civil rights fight, Mr. Horowitz admitted that "if toes have to be stepped on, it might be wise to tread lightly. A big brave stride makes fine sense in New York, but in more difficult markets it might make more sense to rub with the grain, not against it."

George Thiem, Pulitzer prize-winning reporter for the Chicago Daily News who now is an Illinois State Representative-at-Large (Republican), urged radio and television stations to become more active in the field of investigative reporting.

"I know of no good reason why radio-TV stations should not have investigative reporters digging for the stories that lie beneath the surface of local government," Mr. Thiem said.

Heart series available

The National Heart Institute is offering "Know Your Heart," 10 two-minute recorded spots for radio stations. The institute said its previous series had been requested by approximately 1,200 stations. The current series can be obtained free from the Heart Information Center, National Heart Institute, National Institutes of Health, Bethesda, Md. 20014.

This is the GATES VANGUARD I 1 tube, 1-KW AM Transmitter

You're looking at the first major change in AM transmitters in 20 years—both in design and engineering. Only one tube. Complete solid-state circuitry. More reliable. Less expensive to maintain, fewer components to go wrong. Gates has higher "color" fidelity. One tube—one KW—one per cent distortion range. Vanguard I is "on air" in dozens of broadcast stations across the nation proving day-in and day-out superiority. Investigate and you'll agree... here is "tomorrow's transmitter today".

The soundest sound in AM is the new sound of GATES

Shorter conventions on TV?
That's what CBS Inc.'s Salant wants—either through streamlined meetings or less than gavel-to-gavel coverage by the networks

The prospect of substantially shortened television coverage of national political conventions was raised last week by CBS. Whether the idea will gain support from NBC and ABC appears doubtful, however, from the first reactions of news authorities of those networks.

Richard S. Salant, vice president of CBS Inc. and former president of CBS News, sharply questioned the traditional practice of "simultaneous newsgathering." He contended that post-gavel, pre-gavel coverage in a speech at a political affairs seminar of the Kentucky Democratic Central Executive Committee (Broadcasting, July 19).

The politicians should decide how their conventions are to be run, he said, but TV newsmen should decide what will be covered and how. The question, he said, should be re-examined "radically and freshly."

"If the convention managers insist on devising their agenda to cadge a maximum of simultaneous free time on the networks for their strings of half-hour commercials, rather than to get on with the serious business of choosing candidates and illuminating issues, that is their business," he said. "But there is nothing that says we must go along with them and many things which say we should not."

Hour or Two * Mr. Salant said afterward that one possibility as a substitute for gavel-to-gavel coverage was setting aside an hour or two of prime time each convention night, say from 9 or 10 p.m., in which to present convention news highlights live and on tape.

Certain "hot news" events like balloting and acceptance speeches could be anticipated and covered live, he said, and meaningful developments that were not covered live could be presented or recapped on tape. Events after 11 p.m., he said, could be summarized or presented on tape later in the evening.

He said that viewers could be assured, if a selective approach to coverage were adopted, that "we're not going to waste their time with meaningless convention activities and that they could stay tuned in confidence that when news did occur they would see it."

Mr. Salant said CBS authorities were giving serious thought to the question of maintaining tighter editorial control of convention coverage. He also noted that in his speech he had recognized that this issue involves problems "of mechanics, of economies, of competition and of prestige" that are "not easy."

He thought there was a good chance that coverage innovations would be introduced at the 1968 conventions and that they would be "practically inevitable" by 1972.

Special Planned * In another development Fred W. Friendly, president of CBS News, also indicated CBS's concern with present convention coverage. In reporting plans for a CBS News presentation sometime this fall on the history of conventions, including "TV's role in them past and future," Mr. Friendly said:

"It behooves the broadcasting industry to investigate its own role and performance in reporting the conventions, and to allow political leaders and the American people to look at themselves. After all, the next conventions will be carried on Early Bird. It may be that Americans understand what's going on at these affairs but what about Europeans and Asians?"

At NBC and ABC, news authorities were less than enthusiastic about a significant reduction in coverage.

BROADCASTING, July 26, 1965
tion attempts—short of assault. On our side, it is our job to resist—not to permit ourselves to be used, or managed, or seduced. We must not permit our cameras to be participants or the stimulants because otherwise there is the appearance, but not the fact, of reality . . .

"But television news can go only so far in turning its back on events, even events which are intended for, or stimulated by, the presence of television. It will not do to suggest that if only we ignored Martin Luther King and stayed away from Selma, all the problems will be solved. They are news. But it will also not do for television to be actor and participant rather than mirror and illuminator."

Stage Managed • Mr. Salant said he would "not for a moment suggest" that conventions be planned to suit TV.

"But," he added, "I would respectfully suggest that there is something unappetizing about stage-managing a convention to take advantage of the time zones throughout the country in which television coverage appears, and that a filibuster designed to last beyond prime time in the East so that the real debate will come after easterners' bedtime is not consistent with high public policy."

"While I leave it to the party leaders to do what they will, or can, about conventions, I would suggest that conversely television editors and journalists must also now take a good, long, hard look at our practice of simultaneous three-network pre-gavel to post-gavel coverage. Are we really exercising our news judgment when we stay that long looking for stories to fill the air while the record tells us we are treated to a chorus of songs from congressional wives; while resolutions are passed thanking the golden girls; while the boy orators orate; while the favorite sons, who everybody knows will withdraw, are nominated and seconded; while there are six seconding speeches; and while the same people turn up in the carefully rehearsed, carefully orchestrated spontaneous demonstrations?"

"Little wonder that in our resolve to stay from beginning to end, we sometimes descend to trivia where our newsmen interview each other and trade jokes . . ."

He said CBS also is "disturbed about whether we are really serving the public when, in most areas of the U. S., viewers for those eight long nights must either watch the conventions or turn off their sets. Audience studies in New York, he said, showed that viewers were about evenly divided between the convention and independent stations' entertainment programing during the 1964 Democratic convention, and that the independents outdrew the Republican convention three viewers to two.

### Extensive pool for Gemini 5

**Plans call for use of ITT floating station and Early Bird; cost: $1.5 million**

Next month's coverage of the Gemini manned space flight is expected to involve the largest cooperative pooling effort yet undertaken by the TV and radio networks. And it could, for the first time, provide live pictures of a space capsule splashdown.

**ITT World Communications Inc.** last week put forth a plan to establish a floating station from which it would transmit TV pictures via the Early Bird satellite of the Communications Satellite Corp.

The television networks were planning a pooled color transmission of the rocket launch and of the White House reaction to the event.

The plan is a major departure from earlier space coverage in that pool facilities will have full responsibility for all network TV transmissions from Cape Kennedy, the Houston Manned Space Center and other remote locations such as homes of the astronauts.

**One-third the Cost • It was reported by one network spokesman that approximately $1.5 million was being budgeted by the three TV networks for the whole pool coverage effort. This, he said, would be the approximate amount each network would otherwise pay on its own for coverage.**

Following last month's Gemini 4 flight, news heads of the three TV networks met in New York to discuss expansion of pool efforts in later space flight programing (Broadcasting, June 14).

Management of the pool will rotate with each major space mission. Next month's flight is to be under the direction of John Lynch, overall pool producer, and editorial producer William Seams, both of ABC News. Participating will be the three TV and four radio networks.

The Gemini 5 mission is tentatively scheduled to begin Aug. 19 and is planned as an eight-day flight.

**Ready at Splash • ITT World Communications' plan to provide live pictures of the space capsule recovery would involve the construction of a "ground station" aboard a U. S. Navy carrier.**

At splashdown and recovery remote TV cameras in helicopters would send signals to the carrier-based station by microwave and they would be transmitted to Early Bird.

A number of problems would have to be solved before ITT could carry through its proposal. ITT's request to the FCC for authorization of the transmission was met by partial opposition from Comsat in another filing with the commission.

Comsat contends it should have primary responsibility for such an undertaking since the FCC has given it jurisdiction over earth stations used in connection with communications satellites. Comsat also noted that foreign users of the satellite would have to agree to give up their channels for the special TV use and specify rates they would charge.

During the Gemini mission NBC will be handling a pool feed from the Sealab project underwater in the Pacific Ocean. Astronaut Scott Carpenter and nine other men will be shown live during part of the month-long underwater laboratory test.
Recent Communications
Tower Installation

Rohn self-supporting towers are frequently used when self-supporting towers are deemed to be best suited for the situation. This frequently arises when installation of guy wires would interfere with the surrounding area.

Below is a perfect example of reference. Towers are installed here for an interstate highway communications system. In such cases, self-supporting towers are most practical.

A total of 7 Rohn towers are used in this system.

The Rohn tower below is erected to a height of 125 feet and supports one 6 foot microwave disk and two corner reflectors. Tower is capable of handling another 6 foot disk at a future date.

Whenever your situation demands a self-supporting tower, check out Rohn first.

ROHN Towers
Prove popular for CATV

One of the largest suppliers in the U.S.A. today for CATV towers is Rohn Systems, Inc., the installation, erection and engineering arm of Rohn Manufacturing Co.

This growing service field (CATV and allied broadcast uses) finds Rohn towers ideally suited for these purposes. In addition, these firms can have a "turn-key" package supplied to them, ready for instant use. Considerable economies are available, not to mention the value of experienced erectors and on-the-spot supervision. There can be no substitute for knowledge of the tower field, coupled with flawless, properly constructed towers. ROHN can supply both... best.

Daytime color series is sold in 21 markets

A new daytime color series, P.D.Q., has been sold in 21 markets which cover more than 46% of the U. S. television homes, Len Firestone, vice president and general manager of Four Star Distribution Corp., announced last week.

The five-day-a-week celebrity game show on tape has been bought by the five NBC-owned stations (WNBC-TV New York, KNBC-TV Los Angeles, WMAQ-TV Chicago, WNYC-TV Cleveland and WRC-TV Washington). In addition, it has been sold to WGR-TV Buffalo, N. Y.; WHDH-TV Boston: WRLW(TV) Cincinnati; WLW(TV) Columbus, Ohio; WLWI(TV) Indianapolis; WWJ-TV Cleveland; WTTV-Tv Milwaukee; WTVJ(TV) Miami; WLOV-TV Asheville, N. C.; WFLA-TV Tampa, Fla.; WBBM-TV Orlando, Fla.; KUTV(TV) Salt Lake City and the Skyline Network stations in Billings, Mont.; Great Falls, Mont.; Boise and Idaho Falls, both Idaho.

Mr. Firestone also reported that another tape show distributed by Four Star Distribution Hollywood a Go Go, has been set for a second cycle of 26 new episodes. The original group of one-hour programs was offered for sale in February of this year. Four stations have bought the second cycle; WPIX (TV) New York, WGN-TV Chicago, KTVM (TV) Dallas-Fort Worth and WTTG(TV) Washington.

Film sales...

Treasure (Bill Burrell): KPTV(TV) Portland, Ore.

Jump to Glory (Triangle): KCRA-TV Sacramento, Calif., and WSUN-TV St. Petersburg, Fla.

FCC rebukes WFUN for DJ's actions

The FCC was not amused last week by the actions of a disk jockey for WFUN South Miami, Fla., who, by a ruse, directed listeners to telephone the home of an announcer from a rival station.

Rounsaville of Miami Beach Inc., the licensee, said the disk jockey, Morton (Doc) Downey Jr., has been trying to attract listeners and improve his rating. But the commission, in a letter it made public, called the disk jockey's use of the station "irresponsible."

Mr. Downey had announced that by calling a certain telephone number listeners could reach a well-known team of recording stars. Actually the number was that of Charles K. Murdock Jr., an announcer for WQAM Miami.

Mr. Murdock complained that the calls harassed his wife, who was home alone and ill, that the disk jockey broadcast part of a phone conversation between Mr. Murdock and a third person, which had been recorded without Mr. Murdock's permission, and that Mr. Downey broadcast remarks that could be considered insulting to his wife.

'Popeye' popular in color too

King Features Syndicate reported last week more than $1.5 million billings in renewals of its Popeye cartoons, now in a total of 138 markets. According to Al Brodax, director of TV, 26 of the stations which originally bought the cartoons in black-and-white have switched to color prints, noting that the cartoons also are reaching new audiences since first they were offered to stations five years ago. New sales reported last week were WPSD-TV Paducah and WLEX-TV Lexington, both Kentucky, and KSHL-TV Chico, Calif. The syndicator also has newly placed in distribution two radio programs, Here's Heloise and Speaking of Your Health, the latter in one-minute segments (Broadcasting, July 19).

Special on midgets planned

Beacon Sports Network, Brookline, Mass., producers of athletic features for television and radio, will be covering the annual 'Mighty Midget' auto championship this year. Under the supervision of the Northeastern Midget Auto Race Association, the race will take place at Oxford Plains Speedway in Maine.

Beacon Sports plans to have a 90-minute Live & Lively special ready for release by Labor Day weekend in September.

To the uninitiated, a page of Gregg is so much Greek. But a secretary trained in the symbolism of shorthand's foremost authority can translate it into a meaningful communication. To a bus-driver, a page from the 1966 BROADCASTING YEARBOOK won't be very lucid either. But the men and women who make important decisions in broadcast advertising look upon this comprehensive volume as THE authority for a multitude of facts about television and radio...dependable facts they can translate into more profitable advertising plans. Nowhere is so much useful TV-radio information assembled within a single set of covers, or consulted so often day-after-day throughout the year. The 1966 BROADCASTING YEARBOOK, packed with more data about the broadcast medium than ever before, will be delivered to subscribers in mid-December. Your message gets a big bonus of attention and long life at regular BROADCASTING rates. Today's the day to reserve a good spot for it.

Deadlines? Sept. 21 if proofs are needed; Oct. 1, no proofs.
The all new Criterion tape cartridge system has become the new standard of the broadcasting industry. In broadcast installations all over this country and abroad, the Criterion system is supplying reliable tape information around the clock, day after day, year in year out. The all new solid state Criterion series has been designed to give the broadcaster the After Delivery Economies which mean more profits through superior performance.

- Completely transistorized.
- New direct capstan drive, quiet solenoid, plug-in connections and modules.
- Choice of one, two, three-tone and stereo operation
- Available in slide-out rack mount or slim-line, slide-out desk console.
- Conforms completely with recently adopted NAB standards.
Struggle for control of CATV hardware

Cable operators fear they may be forced off poles by phone companies moving in on their business

The pocketbook issue at the National Community Television Association convention in Denver last week was pole-line rights. The subject was discussed at various public meetings and panels; it was the dominant topic in corridor conversations and private meetings.

At stake is the physical base of community television: the ownership of the lines and associated hardware that make up the CATV plant, with its emoluments under the present tax structure—depreciation and amortization to add to cash flow, capital gains in sales.

Poised to puncture this economic base are the telephone companies—both the Bell system and independents.

Both have begun filing tariffs with state public utilities commissions offering to supply the communications channels required to deliver TV signals from headend on the mountain top to a household's TV set. Some telephone companies, principally independent, have also moved into the CATV business, furnishing CATV services directly to subscribers. Mostly this has been through subsidiaries.

From the inception of CATV, the local operator's own equipment has been strung on telephone and other utility poles. The CATV operator has paid a modest sum for this privilege—up until the last few years about $1.50 a year per pole. More recently this fee has climbed—to $3 or more a year; with telephone spokesmen calling for sums up to $10 per pole per year at this date.

In practice the increase in pole rentals has been matched by the addition of special charges—for each FM channel carried by the CATV system, for each channel used for local originations, etc. (Broadcasting, July 19, 12).

The purpose of these "restrictions," as CATV operators call them, is to force cable operators to lease facilities from the telephone companies, the CATV people say.

Action-Reaction * The parry offered by the CATV industry came last week at the Denver convention of the NCTA: Justice Department, litigation, legislation.

The federal moves commenced even before the convention. A communication signed by William Asip, Ameco, was submitted to FCC Commissioner Lee Loevinger early this month and was referred by him to the antitrust division of the Department of Justice. Mr. Loewinger is former chief of the Justice Department's antitrust division.

The Department of Justice acknowledged that it had received the complaint and that it is investigating.

The complaint charges that Bell telephone companies are violating a 1956 consent judgment signed by New Jersey Bell in a federal court. This decree forbids Bell to engage in any communications business that is not a common carrier function, according to the complaints. CATV is not a common carrier, they say. The complaint also charges that other telephone companies are offering CATV circuits for lease and dragging their feet in pole rentals or renewals.

Board Resolution * As the convention opened on July 19, the NCTA board took cognizance of the intense worry of its members on the pole-line situation and passed a resolution charging that Bell system and other telephone firms might seriously impair the future development of CATV as an independently owned industry. Expressing deep concern over the offering by telephone companies to provide virtually the entire physical plant for CATV systems at public utility charges, the board stated:

"Many system owners and prospective system owners view this development as an outright entry into the CATV business by the telephone industry and assert that this, together with the telephone companies' ability to restrict or prohibit use of utility poles for privately owned community antennas, could sound the death knell to future CATV development outside the control of the telephone companies."

"The NCTA board of directors has directed the association's staff to develop immediately all available facts regarding the plans, policies and practices of various segments of the telephone industry regarding the tariff

EIA figures for four months

Production of black-and-white TV sets was off slightly for the first four months of the year while color set production rose 78% above figures for the same period of 1964. An increase of 94% in monthly production of color sets was registered over April of last year. Total set production climbed substantially with the boost from color output.

Distributor sales of black-and-white sets declined through April but a significant increase in radio distributor sales yielded 807,078 more sets on the market this year. FM set production rose during the period from 517,828 to 858,734 and an overall increase in radio production of nearly 2 million was registered.

Production and sales over the first four months of 1965, as reported by the Electronic Industries Association:

offerings, the availability to independent companies of pole-line attachment space contracts, the rate of such contracts when available, restrictive provisions therein impairing the opportunity of privately-owned systems to compete, and all other matters pertinent to the problem including plans for direct entry into CATV.

“All appropriate measures will be taken to prevent the development of a telephone monopoly in the manufacture, installation and operation of new CATV systems and to protect the integrity of existing CATV systems as independent businesses.

“It is the intention of this association to maintain close liaison with Bell system and other telephone companies in the interest of working out arrangements which will accommodate the legitimate interests of both groups and result in the best and most economical service to the public.”

Jerseymen Object — On the same day, the New Jersey Community Television Association accused AT&T and New Jersey Bell Telephone Co. of “attempting to exercise monopoly control over the independent community antenna television industry.”

The filing of a tariff by New Jersey Bell violates the 1956 consent judgment, J. Phil Franklin, Entron Inc., president of the association, said.

“The telephone company’s so-called tariff offering,” said Mr. Franklin, “puts the Bell system squarely in the community television business which the federal courts and the FCC have ruled is not a public utility or common carrier business and is therefore barred to the Bell system.

“The public utility commission’s granting of Bell’s petition would be contrary to the public interest. It would set up an arrangement whereby Bell would then be in a position, through its control over the use of utility poles for the attachment of cable and amplifying equipment, to monopolize and control community television service as well as the manufacturing and installation of community antenna equipment,” Mr. Franklin said.

“This maneuver to get into community television through the back door of a leaseback arrangement,” he said, “plus the Bell system’s present power to assign or deny pole rental to community antenna television companies would enable the telephone giant to throttle free competition and to turn the community television small businessmen into puppets of the mighty Bell system.

“This is the most serious issue the community antenna television industry faces,” Mr. Franklin said.

Basic Case • The New Jersey PUC hearing began early this month and is considered one of the bellwether telephone-CATV cases in the country. The hearing is on New Jersey Bell’s proposed tariff to furnish CATV communications facilities to CATV operators from headend to drop-off. New Jersey Bell testified first, acknowledging that it wants to become the middleman between CATV companies and the home viewer (Broadcasting, July 5).

The pole line problem was a theme running through the remarks of several CATV speakers at the convention last week.

* Frederick W. Ford, president of NCTA: “It appears,” said Mr. Ford, “that the telephone industry has determined to use its power and the strategic position of its poles . . . to take over the community antenna television business.”

* Bruce Merrill, outgoing NCTA chairman: CATV will fight to maintain its “historic” right to put lines on utility poles, Mr. Merrill said.

* E. Stratford Smith, Washington lawyer and special counsel for NCTA: “After 15 years, the telephone companies want in,” said Mr. Smith. The pressure, he said, is through delay and refusals to renew or grant pole-line attachments. The basic question is whether CATV is a public utility. If it is decided that CATV is a utility, then the present industry is changed to one in which the CATV operator will solicit customers and collect monthly charges—most of which he will turn over to the telephone company,” Mr. Smith said.

11,312 rolls of wallpaper from now...

You’ll never recognize New York’s Warwick Hotel!

**Up-to-date CATV gear:**

Cable operators and many of their broadcast brethren found CATV equipment approaching a level of sophistication that ranked some of the gear with standard broadcast equipment.

Throughout all the exhibits at the Denver convention of the National Community Television Association, the emphasis was on solid state devices which incorporate the latest developments in amplifiers, splitters and tapoffs.

Also on display, with more interest being shown than before, were the microwave relay manufacturers, showing equipment especially designed for the increasing number of CATV operators who are, or will be, bringing in distant signals to their communities.

And receiving more than the customary cursory inquiries were two exhibitors who displayed equipment for underground installation of cable systems.

One noteworthy advance that was evident in the exhibit area was the number of manufacturers showing line amplifiers cascaded in series. Jerrold Electronics Corp., Ameco

Bill Jones of Ameco (l) shows James Peterson, KFDA-TV Amarillo and KRIO McAllen, both Texas, a main line distributor amplifier.

H. M. Diambria, Westinghouse Broadcasting Co. CATV chief (c) looks over microwave relay gear, flanked by Collins salesmen Don Mehl (l) and W. H. Veerman (r).

Viking chief engineer Donald Dworkin (l) explains a 12-channel output amplifier to James Y. Nishimura, Savannah TV Cable Co., Savannah, Ga.

Television veteran Paul Mowry (r), New York, observes new heterodyne receiver exhibited by Lenkurt. He is aided by Bill Green, company representative.

CATV operator Harry Levin of Ilion, N. Y. (l), examines one of Jerrold's new Starline solid-state trunk amplifiers. He is being helped by salesman Joe Conowall.

Broadcasting, July 26, 1965
Operators find new, useful industry hardware

and Kaiser Electronics featured this ability.

Featuring a solid state "up and down" converter was Entron Inc., Silver Spring, Md., which permits a single microwave system to multiplex two FM signals on one TV channel.

Jerrold Electronics showed its Starline series of solid state trunk amplifiers, capable of being cascaded up to a maximum of 50. It also showed for the first time its line of 4-inch high housing units containing amplifiers, automatic gain control unit and bridger, or any combination of these three devices. The Philadelphia manufacturer also featured for the first time solid state microwave relay equipment, and two new field strength meters.

Viking Cable Co. displayed its new solid state high level "Win-line" modular units, including main line amplifiers, with or without AGC, bridging amplifiers and line extenders. It also showed half-mile reels of seamless aluminum sheathed cable.

Splice Cover • One of the most interesting of the exhibits was that shown by Sigma Industries Inc., Menlo Park, Calif. Anticipating the day of buried cable CATV systems, Sigma showed a plastic, thick wall, heat shrinkable splice cover that molds itself around connectors and cable for a tight-fitting seal.

Superior Cable Co., Hickory, N. C., showed a line of fibreglass housing for burial cable, each of them color coded.

CAS Manufacturing Co. showed a new directional "in-line" multiple tap, housed in a hermetically sealed, aluminum housing. It features variable isolation and has a minimum of 20 db isolation between drops.

Among the busiest of the booths were those of the tower fabricators and construction firms. Showing their wares at the NCTA convention were Andrews Tower Inc. and Fort Worth Tower, both Fort Worth, Tex.; Rohn Systems Inc., Peoria, Ill.; T.C.A. Tower Co., Mableton, Ga.; Utility Tower., Oklahoma City, and Video Towers, Fort Worth.

Specialities for linemen were shown by Hunt-Pierce Corp., Milford, Conn., and Jack Pruzan Co., Seattle, Wash.

Edward M. Whitney, Entron vice president for sales, shows one of his company's new solid-state 'up and down' converters to Stephen Vaughan (l) of the West Alabama TV Cable Co., Fayetteville, Ala.

Robert Clark, Vumore (l), is being shown CAS's distribution gear by Gary Chandler, company salesman.

A new headend is shown by Robert Jacobs of Dynair (l) to Carl J. Meyers, WGN-TV Chicago (c), and Edward E. Benham, Los Angeles consulting engineer and former engineering director of Subscription TV Inc.

Explaining Sigma's waterproof cable sleeves to George McClanathan, Meredith-Avco, is Signal's Dan Weagant (r).
Support for UHF plan
NAB backs proposal for low-power TV's in small communities

The National Association of Broadcasters gave full support last week to an FCC rulemaking proposal which would establish a new class of low-powered TV stations designated for use in medium and small-sized communities.

The association, in comments filed Tuesday (July 20), said the proposal represents an extension of commission efforts made over the past few years, to provide additional free TV service tailored to local public needs. It added that the current proposal would further this objective and best serve the public interest by balancing maximum local outlets with broad national coverage.

The commission's notice of rulemaking, issued early last month, would reserve channels 70 through 83 for a new class of stations with a maximum power of 10 kw and a maximum antenna height of 300 feet above average terrain (BROADCASTING, June 14, 7).

The notice also stipulates that no specific channels would be assigned in advance to any community but would be available upon specific application where the assignment would comply with minimum mileage-separation requirements. Only one commercial and one educational station would be authorized to a single city.

Also commenting on the rulemaking last week were the Electronic Industries Association, Jerrold Electronics Corp., the Georgia State Board of Education and Midwest Program for Airborne Instructional Television Inc. (MPATI).

EIA, while commending the commission on its proposal for more effective use of the UHF spectrum, intimated that the current rulemaking should be abandoned.

The association also expressed the belief, according to the EIA official, that the FCC should discard its month-old UHF allocations table and institute an up-to-date technical study surrounding the present mileage-separation requirements and electro-magnetic propagation characteristics upon which the table is based, including channels 70 to 83.

Both the Georgia State Board and Jerrold Electronics, on the other hand, endorsed the proposal. The board, in offering a counter proposal, urged the commission to further divide the top 14 channels into a six-channel block (70-75) for commercial use, and a nine-channel block (76-83) reserved for educational use.

Jerrold, an equipment manufacturer and community antenna TV operator, urged the commission to include CATV owners among those eligible to be qualified applicants for the new community-type stations.

The company also asked that the commission liberalize its TV operator requirements to allow sharing of technical personnel for the new class stations and CATV systems, in the event the latter would be eligible to apply. MPATI, which was recently granted a five-year authorization to operate its airborne instruction program in the Midwest on channels 72 and 76, urged the commission to provide for interference protection in that area in the event the current rulemaking proposal is adopted.

The Joint Council on Educational Broadcasting said the FCC action represents "a major blow to the cause of educational television and education generally."

The council took particular issue with the unsaturated nature of the table. JCEB said that the reservation policy so vital to educational broadcasting becomes meaningless in an unsaturated table.

The council expressed strong dissent to the commission's policy of restricting the number of educational assignments for major cities to two, while commercial interests are allocated as many as nine channels in the same metropolitan areas.

The National Association of Educational Broadcasters has also called for a saturated UHF plan (BROADCASTING, July 19).

In a separate action last week, the commission extended the July 20 deadline for filing comments on the new class of stations to Sept. 20, and advanced the reply deadline from Aug. 5 to Oct. 5.

Seeking the extension were the Association of Maximum Service Telecasters, the National Association of Educational Broadcasters and the Tri-State TV Translator Association.

Technical topics . . .
All-channel reception = Blonder-Tongue Laboratories, Newark, N. J., has announced a new line of color-approved UHF-VHF accessories for home distribution systems. Included are UHF antennas, amplifiers, couplers, splitters, wall and feed-through plates. B-T officials said the all-channel, color-approved reception system costs about 10% more than a VHF-only installation but "does a better job more easily."

Light weight = Microwave Associates, Burlington, Mass., has introduced solid-state television relay equipment for mobile applications. The MA-2 system can be set up anywhere with a nominal power consumption of 60 w using 110 volts ac, or 28 or 12 volts dc.

EIA seeks delay = Electronic Industries Association has asked the Senate communications subcommittee to delay action on legislation (S-1015) proposed by the FCC which would empower the commission to regulate the manufacturing of electronic and electrical devices which might cause interference to radio and TV reception. EIA Executive Vice President James D. Secrest said the committee ought to postpone action on the bill, as well as five others, all requested by the FCC, but held the record open on S-1015 and another on common carrier interconnections.

Color coax = Jerrold Electronics announced it has begun delivery of its color coaxial TV antenna to General Electric under private label contract. Jerrold's color coaxial antenna uses shielded 75-ohm coaxial cable instead of the customary 300-ohm twin lead, and is said to reduce interference and weather effects.

Entron gets $1 million N.J. CATV contract

Announcement of a $1 million contract from Federal Electric Corp., a subsidiary of International Telephone & Telegraph Corp., New York, came last week at the National Community Television Association convention in Denver. Entron Inc., Silver Spring, Md., said it will supply equipment for a complex of CATV systems to be constructed by Federal Electric in New Jersey. The initial system to be built for Garden State Television Cable Corp. will serve 20,000 homes and probably be in service by early fall.

Entron is currently involved in construction worth over $1 million on CATV systems in Bridgeton, N. J.; Dover, Del.; Jacksonville and Laurinburg, both North Carolina; Utica, N. Y.; and Washington and Bridgeport, both Illinois, for Vencennes University. The firm said sales were up 15.7% to $2,284,399 in the year ended June 30 from $1,974,716 in 1964. Net income per share was 56 cents in the past fiscal year representing an increase of 24.4% over the previous period.
Group to defend free enterprise

Major TV owners form council to fight multiple-ownership restrictions; Ward Quaal will lead group

Another new broadcasting industry group—The Council for Television Development—came into being last week, its purpose to counter the FCC's restrictions on group ownership of major market television stations.

The major weapon: a broad program of research defending the free enterprise system of broadcasting, particularly the public benefits of group operations.

The council was formed in Chicago at a meeting of representatives of more than 100 group-owned stations and its doors were thrown open to all in the broadcasting business who might oppose the FCC's proposal to limit ownership in the first 50 markets to three TV stations, no more than two of them VHF (Broadcasting, June 28). The FCC policy is now in effect on an interim basis pending formal rulemaking proceedings.

Virtually every major group owner was represented at the meeting held Tuesday (July 20) and part of Wednesday (July 21) at won-tv Chicago. Invited but not present was Westinghouse Broadcasting Co. The networks as group owners were not invited. Last week's meeting was the second, an exploratory session having been held in January in Miami.

Although last week's session was chiefly of an organizational nature, it appeared the consensus was that the commission's new restrictions would hinder the full development of a competitive television industry and would result in greater concentration of control as well as less diversification of program sources.

Quaal to Head Group = Ward L. Quaal, president of WGN Inc., was elected chairman of the council's executive committee. Hubert Taft Jr., chairman of Taft Broadcasting, was named vice chairman while Roger W. Clipp, Triangle Stations, was named secretary-treasurer.

A research committee was established under the chairmanship of Hathaway Watson, RKO General, while W. Theodore Pierson of the Washington law firm of Pierson, Bal & Dowd, was appointed to serve as counsel to the executive committee. Mr. Pierson also will function as ex-officio member of the research committee.

The research committee membership also includes the following: Dwight Martin, WDSU-tv New Orleans; Thomas J. Dougherty, Metromedia; Wrede Petersmeyer, Corinthian Broadcasting Corp.; D. L. Provost, Hearst Corp.; John E. McCoy, Storer Broadcasting; Arch Madsen, Bonneville International; Frederick Gilbert, Time-Life Broadcasting; Lawrence H. Rogers, Taft Broadcasting; Frank Gaither, Cox Broadcasting, and T. Ballard Morton, WAVE Inc.

The committee is to meet Wednesday (July 28) at RKO General headquarters in New York to plan its strategy.

"The future development of all broadcast companies is seriously threatened by the pending proposals of the commission with respect to the multiple ownership of stations," Mr. Quaal said. "Our organization welcomes the participation of all television interests anxious to preserve and promote a dynamic and growing system of broadcasting by free and private enterprise," he added.

Montanans throw the book at NAB

A series of recommendations by the Montana Broadcasters Association board of directors takes the National Association of Broadcasters over the coals on: music licensing, community antenna TV, legislative action, super-power stations and copyright. In music licensing and CATV, the MBA resolutions call for NAB board members who have connections in either category not to vote on those subjects.

The MBA said the NAB "must take a more positive stand and must become directly involved . . . both financially and staff-wise" with the all-industry
committees working on music licensing agreements. The resolution adds that “NAB board members holding music copyrights or representing firms engaged in the manufacture or recording of phonograph records [should] be asked to refrain from voting when matters concerning music copyright are before the NAB board.”

Acknowledging CATV as one of the “most important issues” of the day, MBA requests the NAB board members “holding franchises or applications for franchises or interest in CATV franchises or representing firms holding franchises or applications for franchises” not to vote on “policies, matters or decisions” regarding CATV.

In the area of legislation and regulation, MBA said NAB should “cease operating as a defensive organization only and make an annual statement of purpose with clearly defined goals and a definite and aggressive plan of action each year. And that it initiate legislation and regulation beneficial to broadcasters rather than constantly being in a position of defending against legislation and regulations which are not in the best interest of broadcasting." Areas cited by the MBA board for NAB to take “a positive step forward for broadcasters” by seeking limitation or removal of effective or proposed FCC rules are: fairness doctrine, public inspection of records and “exorbitant filing fees.” It added that one of the first items for small-market TV stations should be gaining permission for remote control.

MBA said super-power stations are not in the public interest and said the NAB’s “milk toast approach” should be changed into one that is “affirmatively and aggressively” against such stations. “The NAB must protect its broad membership through an aggressive battle to do away with any possibility of super-power giants,” it added.

The composition of the “NAB-appointed copyright committee” was attacked by MBA as a “farce” because three of the five members represent networks “with vested interests in the recording business and the broadcaster has a minority voice on the committee.” MBA recommended changing the committee to afford better representation of broadcast stations.

**WBRT’s license reactivated**

The FCC last week rescinded a May 12 order which dismissed the license renewal application of WBRT Bardstown, Ky. Instead it imposed a $1,000 fine. The licensee, Lawrence W. Adams, was to be denied license renewal for failing to make annual reports and other material for over a four-year period, the commission said.

The station was to cease operation on July 21. The commission added that the WBRT renewal application will be held in a deferred status until technical problems are solved.

**NANA rebuts critics of its TV poll**

The North American Newspaper Alliance replied last week to industry critics of its polls on public attitudes toward television, and claimed its efforts are designed to help TV.

In an interview published in the July-August issue of The Viewer, a newsletter of the National Audience Board, and in a letter sent to the Television Information Office, John Osenenko, NANA’s executive vice president, pointed out that NANA critics had set up a “straw man” and “then proceeded to attack it vigorously.”

He said NANA had acknowledged in the first of its reports on TV last February that its polls were not a national cross-section of all TV viewers. He added that NANA had stressed that its answers were coming from the more adult and sophisticated viewer-reader, and added:

“We proceed to formulate questions that would elicit spontaneous responses written as well as statistical—that might actually serve as a bellwether for the TV industry in some of its nerve-wracking decisions in connection with the 1965-66 season. The responses to questions about commercials hold valuable clues for TV advertisers, we feel.”

NANA’s polls have been running in approximately 40 newspapers. Several months ago one poll claimed there was a growing disenchantment with TV among more “highly educated viewers.” TIO challenged the authenticity of the poll as well as another by Louis Harris, which turned up findings similar to those by NANA (Broadcasting, June 21).

TIO contended at the time that better educated households are watching television increasingly. It referred to an A. C. Nielsen report that for the first three months of 1965, these viewers set a record of six hours, 21 minutes per home, per day.

Distant Drums • In contrast to these figures, Mr. Osenenko said, are the “distant drums which the newspaper poll is catching.” He said he had offered NANA material to the networks which NBC, for one, had “turned down.” NBC had rejected the offer because it said it had “no confidence” in the NANA project which it called...
WHAS-AM-TV to get new building

Construction of a new $4.5 million studio and office building for WHAS-AM-TV Louisville, Ky., has been announced by Barry Bingham Sr., president of the stations. Work begins in the fall and should be completed after 18 months.

Designed by the architectural firm of Louis and Henry, Louisville, the building provides for FM facilities since WHAS has applied for such with the FCC. It will also double the station's present TV studio facilities and add local, color studio origination to network and film color.

The new structure represents the third major step in program expansion for WHAS. In 1964 it installed a new radio transmitter and last April WHAS-TV began transmitting from its 1,949-foot tower at Floyds Knobs, Ind.

"biased" and "highly misleading.")

Mr. Osenenko said he believed the industry could benefit from the survey results. He pointed out that the results of the poll showed, among other things for example, that some programs cancelled still have an audience; soap operas rate low in the drama category; stars should not do commercials, and viewers don't want government interference in TV.

Duluth applicants have merger plan

The FCC review board last week was asked to approve an agreement eliminating the necessity of lengthy comparative hearings among the three applicants for a new TV station, on channel 10 in Duluth, Minn., and could result in the station being activated by early 1966. The parties are Northland TV Corp. (formerly WM'T-TV Inc.), Central Minnesota Television Co. and Channel 10 Inc.

Central and Northland are seeking dismissal of their applications and a grant to Channel 10 Inc. Following this, Channel 10 Inc. and Northland would merge into a new company, Channel 10. Channel 10 Inc. stockholders would retain 53% of the new organization, and Northland's stockholders would have the option to acquire the remaining 47% interest. Central, which would have no interest in the new company, would be reimbursed up to $10,000 for expenses in processing its application.

Overmyer looks for New York staff

The Overmyer Communications Co., which is aiming to place seven UHF TV stations on the air over the next two years, has earmarked $10 million to cover land acquisition, construction, broadcast equipment, engineering, research and personnel requirements for the undertaking.

OCC's financial commitment and current planning were outlined last week by Robert F. Adams, executive vice president, in a progress report on the company's activities. He said corporations for each of the seven stations already have been established and engineering evaluations and planning are proceeding.

Mr. Adams said OCC now is processing applications for top-level posts to be filled at headquarters in New York. The company is seeking a financial executive to coordinate all finances and budgeting for the TV stations; a chief engineer; a national sales manager; a national research and sales development manager; a national program manager, and an executive assistant.

Construction permits have been approved by the FCC for WHIO(TV) Toledo, Ohio, WATL(TV) Atlanta and WNOP(TV) Newport, Ky.-Cincinnati, according to Mr. Adams. Applications are before the FCC for approval of the transfer of construction permits to

BROADCASTING, July 26, 1965
Wisconsin Valley Television Corp. is WGAR AM-FM Broadcasting which owns WTVH(TV) Madison, and WSAU-AM-FM-TV Wausau, both Wisconsin Valley TV is owned by five Wisconsin newspapers: Wausau Record Herald, Wisconsin Rapids Tribune, Marshfield News Herald, Rhinelander News and the Merrill Herald. Charles Lemke is an individual stockholder with 27% interest. The Rapids Tribune is owned by Wisconsin Rapids Tribune Co., owner of KFHR-AM-FM Wisconsin Rapids.

The KVTV sale is subject to FCC approval. KVTV telecasts on channel 9 with 288 kw visual and 144 kw aural. The FCC also last week approved the sale of WTVH(TV) Peoria, Ill., from Metromedia Inc. to Twelve-Ninety Radio Corp., owned by the Kankakee (Ill.) Daily Journal Co., for $2.2 million. Byrrell L. and Len Small are majority stockholders of the Kankakee Daily Journal with 42.47% each.

Changing hands

ANNUCED: The following station sales were reported last week subject to FCC approval:

KVTV(TV) Sioux City, Iowa: Sold by Peoples Broadcasting Corp. to Forward of Iowa Inc., for $3.5 million was announced last Thursday (July 22).

Peoples Broadcasting acquired the Sioux City TV station in 1957 for $3 million. KVTV has been in operation on channel 9 for 12 years and is affiliated with CBS-TV.

The Nationwide Mutual Insurance Co. is the major stockholder in Peoples Broadcasting which also owns WRED-AM-FM Columbus-Worthington, Ohio; WGAR-AM-FM Cleveland, and WNAV Yankton, S. D. Forward of Iowa Inc. is a wholly owned subsidiary of The Wisconsin Valley Television Corp.

KVTV(TV) sold, WTVH(TV) sale OK'd

The sale of KVTV(TV) Sioux City, Iowa, from Peoples Broadcasting Corp. to Forward of Iowa Inc., for $3.5 million was announced last Thursday (July 22).

Peoples Broadcasting acquired the Sioux City TV station in 1957 for $3 million. KVTV has been in operation on channel 9 for 12 years and is affiliated with CBS-TV.

The Nationwide Mutual Insurance Co. is the major stockholder in Peoples Broadcasting which also owns WRED-AM-FM Columbus-Worthington, Ohio; WGAR-AM-FM Cleveland, and WNAV Yankton, S. D. Forward of Iowa Inc. is a wholly owned subsidiary of The Wisconsin Valley Television Corp.

NCTA's growth

The steady pace of community antenna TV development was cited last week by NCTA President Frederick W. Ford in his address to the NCTA convention in Denver.

When he assumed office on Jan. 1, he said, association members numbered 483 systems in operation plus 44 systems under construction. Latest membership tally (July 1) indicates 565 operating systems and 77 under construction.

Generally accepted figures estimate a total of 1,600 CATV's currently operating across the country with a similar number (some estimates range as high as 2,000) systems in either application or construction stage.

old L. Vigue, Norman G. Gallant, Joseph R. Roy and Paul F. McClay, for $164,551. Mr. Gallant is general manager of WFAU-AM-FM. Messrs. Vigue and McClay are employed at WTVL Waterville, Me. Mr. Roy is engineer at WCOU-AM-FM Lewiston, Me. WFAU is on 1340 kc with 1 kw day and 250 w night and WFAU-FM is on 101.3 mc with 4.8 kw.

- WCOU-AM-FM Lewiston, Me.: Sold by Faust Couture and associates to John C. Libby and Harry Ferguson Jr., for $183,057. Mr. Libby has interest in WFAU-AM-FM Augusta. WCOU broadcasts on 1240 kc with 1 kw day and 250 w night and WCOU-FM is on 93.9 mc with 13 kw.

New TV stations

As of July 22 there were 124 television construction permits outstanding for stations not yet on the air. Of these 20 were commercial VHF's, 73 were commercial UHF's, 7 were educational VHF's and 24 were educational UHF's.

- WTWO(TV) Terre Haute, Ind., (ch. 2) Illiana Telecasting Corp., permittee, last week announced that Peters, Griffin, Woodward Inc., New York, will be its national representative. The announcement was made by J. T. Gelder Jr., executive vice president and general manager of the station, and Lloyd Griffin, president-TV of PGW Inc. WTWO plans to go on the air Sept. 1 with 100 kw visual and 19.5 kw aural. Mr. Gelder also said that construction of the station's 954-foot tower was complete. Channel 2 in Terre Haute will be a primary NBC affiliate and will carry some ABC programs. Station executives include I. R. Livesay, president; Robert B. Beall, commercial manager; Bill Evans, operations manager, and Nile Hunt, chief engineer.

- WHTV(TV) Syracuse, N.Y., (ch. 43) Educational Television Council of Central New York, permittee, has received permission of WNYE-TV Syracuse, Channel 9 Syracuse Inc., licensee, to mount its proposed antenna atop the WNYE-TV tower. Agreement was signed by T. Frank Dolan, treasurer and vice president of WNYE-TV and John G. McAllister of the ETV council. Also included is a WNYE-TV contribution of land for the ETV transmitter subject to the approval of the town of Pompey, N.Y. The ETV council is presently seeking FCC approval to broadcast on channel 24. The ETV group is also receiving legal, engineering and other services from WNYE-TV, WSYR and WHEN all Syracuse.

- WNYE-TV New York, (ch. 25), New York City Board of Education, permittee, last week awarded a $400,000 contract to RCA for cameras, tape recorders and other equipment. The new equipment will be installed during the summer and fall. James F. MacAndrew, director of broadcasting for the board, said WNYE-TV will offer programs for school viewing by pupils in kindergarten to the 12th grade as well as providing in-service teacher training.

New Yorkers explore market data, CATV

Broadcasters were urged last week by Stephen Dietz, executive vice president of Kenyon & Eckhardt, to provide advertising agencies with more detailed information on their TV-radio stations' audience compositions and on the relationship of this data to advertisers' requirements.

He told the New York State Broadcasters Association executive conference in Cooperstown last week that pinpointed information is required more than ever before with the segmentation of the broadcast media (radio, TV, FM radio, color TV, UHF, stereophonic broadcasting, all-talk radio, all-news stations).

The relationship between the national representative and the station was explored by Arthur H. McCoy, president of Communications Honolulu Ltd. (KONA-TV Honolulu) with particular emphasis on what a broadcaster may realistically expect from his rep. Mr. McCoy pointed out to broadcasters at the two-day session (July 19-20) that small market stations, particularly those in radio, can expect only slight support from a representative, but he outlined some suggestions that could strengthen the relationship. Mr. McCoy, until recently was president of the John Blair rep firm.

CATV Comments • A debate on the pros and cons of community antenna television featured James O. Marlowe, assistant to the president of WWLP(TV) Springfield, Mass., and William V. Rothrum, vice president of Newhouse Broadcasting Corp., whose company operates seven CATV systems.

Mr. Marlowe challenged sharply the practice of CATV operators who carry a TV program without regard to its origination, copyright protection or program ownership.

Mr. Rothrum asserted that CATV cannot be regulated out of business. The FCC, he said, is attempting to assert jurisdiction, but asked: "Can they legally?" He asserted that the public is demanding CATV and "they're going to have it."

EXCLUSIVE BROADCAST PROPERTIES!

GULF COAST—High powered, well equipped, fulltime radio station serving marketing area of over 150,000. Tremendous potential for owner-operator. Priced at $240,000 with $100,000 down. Contact—Richard A. Shaheen in our Chicago office.

SOUTHWEST—Long time owned, fulltime radio station priced so that it could pay its way out from present profits. Total of $300,000 with $87,000 down and the balance over ten years. Contact—DeWitt "Judge" Landis in our Dallas office.
Equal power for networks

FCC hints it may have to reduce facilities of New York O&Os

The 25-year-old 770 kc case is headed for the U.S. Supreme Court if the U.S. Court of Appeals' latest decision in the matter means what the FCC thinks it does.

The case involves the FCC's decision to permit Albuquerque, N. M., to operate on the frequency as a class I-B station—and ABC's battle to maintain the frequency as an inviolate clear channel for its key radio network station, WABC New York.

The U.S. Court of Appeals sent the case back to the commission in February in an opinion that, the commission said last week, appears to limit the commission's options (Broadcasting, March 1). The commission said it might have no choice but to require all network stations in New York to be duplicated by class I-B stations, in order to treat them all equally.

The commission said it would seek a clarification from the appeals court. And if the court's decision does raise questions "warranting Supreme Court review," an appeal to the high court will be pressed. The commission has already filed a request for review, conditioned on the clarification provided by the appeals court.

The commission, in a 1963 decision, held that, in view of the needs of the Southwest for radio service, KOB should be permitted to operate as a class I-B station on 770 kc. This would make both KOB and WABC I-B stations, with each required to protect the other's signal at night. The commission's decision in the clear-channel proceeding in 1961 provided for two I-B's on 770 kc.

ABC Appeals - ABC appealed both the 1963 decision and that part of the clear-channel order affecting 770 kc. The network argued that it would be placed at a disadvantage with respect to CBS and NBC, both of which have New York stations operating on clear channels.

The CBS frequency (880 kc) is to be occupied by a new II-A station in Wyoming under the action in the clear-channel proceeding, and NBC's frequency (660) has long been occupied by a class II station. Class II stations, however, are required to protect the dominant station at night.

The court held that the commission must provide comparatively equal channel facilities to the radio networks in New York unless "compelling public interest reasons" exist for unequal treatment. The court rejected the commission's argument that such a showing had been made.

The court directed the commission to reopen the case to determine whether class II operation by KOB would meet the needs of the Albuquerque area. The court also instructed the commission to give ABC a hearing on whether the frequencies occupied by the New York stations of CBS and NBC should accommodate two I-B stations, "to the extent that comparatively equal channel facilities may be provided for . . . the three networks in the manner most favorable to the public interest."

Case Reopened - The commission, accordingly, reopened the record last week to provide for the reception of updated data regarding the needs of the Albuquerque area. But it added that if it finds the needs to be unchanged, "as appears likely," it must be free to determine "whether the factor of flag-ship station equality" is outweighed by other public interest considerations.

The hearing will constitute an in-depth examination of the potential effect on ABC of class I-B operation by WABC, in view of the class I-A operations of WCBS and WNBC.

The commission also invited ABC to file suggestions as to other channels on which KOB might operate as a class I-B station, in the event a further hearing on an alternative channel is required.

But before proceeding with the hearing, the commission said it wants clarification of the court's order, which it said is ambiguous as to the course the commission would be required to follow in the event the Albuquerque area was still considered to need class I-B service.

The commission also said it wants to know whether equality of network facilities "is required per se without regard to any effect on the network's service to the public or ability to compete with other networks."

May Raise Questions - If the court's order does "more than require the commission to conduct the proposed proceedings," the commission said, "it raises important questions warranting Supreme Court review."

The case, which has been before the court three times, began in 1941, when the then WJZ New York (now WABC) was shifted from 760 kc to 770 kc as a class I-A clear channel station, and KOB was moved from 1180 to 770 kc with 50 kw on a temporary basis. The

Senate OK's Marks's USIA appointment

The director-designate of the U. S. Information Agency, Washington communications attorney Leonard Marks, was approved Tuesday (July 20) by the Senate Foreign Relations Committee amid warm congressional praise. Confirmation by the Senate itself followed on Wednesday (July 21) by unanimous voice vote.

Mr. Marks listed his long experience in broadcasting, his service as a director of the Communications Satellite Corp. and his contacts with other information media as qualifying him for the post. He said he believed that "the United States has a way of life that speaks for itself. We should extol but we must tell the truth." He cited as a major difficulty presenting an accurate picture of this way of life without distorting the news to do so. Educational television to reach people in underdeveloped areas and communications satellites to "bring communications to remote parts of the world" are among his ideas for improving USIA service. (Mr. Marks has been active in U. S. ETV circles; is on board of the National Association of Educational Broadcasters.)

The native Pittsburgher received bipartisan support from his home state's senators, Joseph S. Clark (D-Pa.) and Hugh Scott (R-Pa.). Several congressmen have praised Mr. Marks' nomination, including Senator Vance Hartke (D-Ind.), who said in the course of a long and complimentary speech that he "comes well equipped to carry out his new responsibilities." Senator Hartke concluded: "I would like to commend President Johnson for his nomination and congratulate the country on the appointment."

In response to questions, Mr. Marks told the senators that he has disposed of all his communications stocks except for a "minor interest in a little radio property" and the stock he and his wife, Dorothy, hold in the North American Newspaper Alliance. He doubted that either would constitute a conflict of interest and observed that they might be difficult to dispose of, but promised to try.
moves resulted from the deletion of 760 kc and 1180 kc as U.S. channels under terms of the North American Regional Broadcasting Agreement. ABC has been trying to have them ejected from 770 kc.

Commissioner Lee Loevinger dissent to that part of the commission order seeking clarification of the appeals court's order and the contingent appeal to the Supreme Court. He said the court of appeals simply wants the commission to "face squarely" the issue of whether ABC is entitled to have a New York station the technical equal of those of the competing networks.

The commission, he said, has never faced this question and has, instead, treated the case "as though it were simply a matter of technical interference and conflicting claims between two local or regional stations."

Community activity urged at Idaho meet

Activity of the broadcaster in community service, promotion and news at the local level was stressed at last week's (July 18-20) annual convention of the Idaho Broadcasters Association in Boise. Broadcasters also heard a plan for progressive community antenna regulation.

* Vincent Wasilewski, president of the National Association of Broadcasters, said a station that becomes a moving force in the community does not have to worry about "being shoved aside by satellite transmission, CATV, pay TV or any other development because you will be so necessary to that local community that its citizens will not permit it."

* Maurie Webster, vice president and general manager of CBS Radio Spot Sales, said favorable publicity at the local level can be achieved by "sponsoring community events, editorializing effectively, demonstrating civic leadership, introducing imaginative programs. . . ."

* Theodore F. Koop, vice president of CBS, Washington, discussed the forthcoming report of the All-Media Freedom of Information Committee, which he heads, on standards for mass coverage of news events. He said the report will be available on Aug. 7.

* FCC Commissioner Lee Loevinger said broadcasters and government officials should work together and adopt a progressive attitude toward expansion of TV and regulation of CATV's.

Mr. Wasilewski said it is "no secret that the real political muscle does not originate in Washington; it is developed in hometowns, counties and cities from which our national representatives come."

Referring to CATV's that desire to bring in distant stations, and the possibility of satellite-to-home transmissions, the NAB president said the decision to have stations serve cities, towns and areas will remain valid "only if local stations make real and meaningful contributions to the community interest" and the audience "must be convinced of that contribution."

Commissioner Loevinger repeated his eight-point program providing for an "expanding future for television" and a "progressive and expansive program for regulation of CATV's" that he described in Denver last month (BROADCASTING, June 14).

Microwave grants cause talk at NCTA

A little-publicized FCC grant of microwave applications to American TV Relay Inc. caused considerable talk among those attending the National Community Television Association convention in Denver last week. The reason for the talk—the distances involved.

American TV (formerly Antennavision Services Co.) was authorized to transmit the programs of four Los Angeles stations to community antenna television systems in Farmington and Silver City, both New Mexico—distances, respectively, of 600 and 575 miles.

CATV operators in Denver saw in the action a possible hint of commission thinking about the so-called leapfrogging question—that is, whether CATV's should be permitted to carry distant stations in preference to those of outlets that are closer.

However, the action was a routine one, taken by the staff, under delegated authority. And the grants do not set a record for distance. Western Microwave, a common carrier operating in the mountain states, has relayed the signals of Salt Lake City TV stations to CATV's near the Canadian border in Montana, a distance of some 700 miles, since 1960.

Harris cries:
Stop 'bickering'
At NCTA meet, he calls for
end of arguments; criticizes
FCC 'piecemeal' regulation

Representative Oren Harris (D-Ark.) urged broadcasters and CATV operators to compromise their differences and agree on basics to help Congress establish fair legislation governing the FCC's authority over CATV.

Speaking at the opening luncheon at the National Community Television Association convention (July 19), the House Commerce Committee called on broadcasters and cable operators to "get together and not have all this bickering back and forth."

In the course of his talk, which disappointed some members in his audience (who had expected him to announce new negotiations between broadcasters and CATV's), Mr. Harris chided broadcasters who are "fearful and even resentful" of CATV.

"They have attempted to enlist the aid of governmental bodies in the competitive struggle that is going on in the communications marketplace," he said. But, he warned in discussing freedom of choice of TV programs for the public: "This freedom of choice under no circumstances should lead to the demise of local broadcasters . . . nor undermine . . . policies which the commission adopted when it assigned frequencies for television throughout our land."

Scarcity of channels, he added, is one of the fundamental problems in the CATV-broadcaster controversy. Mr. Harris said he sees the FCC and broadcasters finding new methods, boosters, translators and others, to give to most Americans "an adequate free choice among available television."

And, he added to applause, "CATV should and will play an important role in achieving this objective."

FCC Partial - Although the FCC claims it has jurisdiction to regulate CATV, Mr. Harris said he does not believe the commission now does have the authority, and certainly not the power to pre-empt state and local laws.

It is incumbent upon Congress, the Arkansas Democrat said, to lay down a policy governing the FCC's determination of how cable systems should operate in relation to other segments of the communications industry, including, he emphasized, broadcasters and common carriers. The latter, is assumed to be a reference to the problems of CATV operators and telephone companies.

Criticizing the FCC for its "piecemeal" approach to regulation, Mr. Harris suggested that the FCC's bias against CATV may come from "overrepresentation by the 'ins'," which result, he said, in FCC rules and decisions reflecting the "fears and resentments of the 'outs' against the 'outs'."

N.D. stations form
broadcasting job corps

Community service is many things. Among others, community service can be a locally organized job corps aimed at introducing youth to constructive employment. North Dakota Broadcasting Co. (KXGO-AM-FM Fargo, and KXJB-TV Valley City, both North Dakota) has organized a summer program to familiarize area teen-agers with the broadcasting industry, and particularly broadcast sales. At company expense 20 selected trainees from 10 communities in North Dakota and Minnesota went to Fargo for two days to be lectured intensively on radio-TV facilities and sales techniques.

Under the guidance of general operations manager, Constance Blackstead, the students returned to their communities as apprentice broadcast salesmen retained on a standard commission basis.

Fines for three stations

The FCC last week notified three AM licensees of their liability for total of $1,850 in forfeiture for rule violations.

KAPI Pueblo, Colo., was fined $750 for failure to employ a full-time first-class operator or to contract the services of a part-time operator. Centennial Radio Corp., KAPI licensee, was also cited for failure to file an annual financial report for both 1963 and 1964.

KYOO Henderson, Nev., was fined $750, the FCC said, for failure to identify a sponsor and nine other violations including operations and logging. KYOO Broadcasting Inc. is the licensee.

KALO Little Rock, Ark., also received commission notice to pay a fine of $350. The FCC said the licensee, Glen Harmon Corp., permitted the broadcast of teaser commercials for 15 days last February. The broadcasts were aired 300 times during that period the commission added. Each licensee has 30 days to contest or pay the fine.

FCC after WEKY's license

The FCC last week told Tinker Inc., licensee of WEKY Richmond, Ky., to show cause why its license should not be revoked. The order was issued for what the commission said was an unauthorized transfer of control, failure to report stock transactions and other violations, including double billing.
Is Simon out to get ABC?

Denies plan to take over, but some Wall Street analysts doubt him

Continued buying of American Broadcasting Companies stock by financier Norton Simon has revived speculation that the multimillionaire industrialist will make an all-out effort to gain representation on the ABC board and, perhaps, eventually make a bid for control of the company.

ABC and Mr. Simon, now the company's largest single shareholder with 400,000 shares, or 9%, were keeping their own counsel last week with regard to the possibility that Mr. Simon would once again seek a voice in the affairs of the company.

Most Wall Street analysts questioned by BROADCASTING thought it doubtful that Mr. Simon is interested in ABC only as an attractive investment.

A high ABC official said Mr. Simon had not recently asked for board representation, meaning not since a year ago when the company had put a temporary end to his board membership ambitions by abolishing a cumulative voting procedure for directors. This means that if it comes to a proxy fight, a board candidate would need the support of 51% of voting stock to gain a seat.

Over one year ago it was understood Mr. Simon owned about 200,000 shares of ABC. His holdings are through Hunt Foods & Industries, of which he's the largest single shareholder, and McCall Corp., itself 30% owned by Hunt Foods. Mr. Simon sits on the finance committee of both Hunt Foods and McCall.

More Than Board = His 400,000 shares of ABC give him a greater share of the company than is held by all of ABC's current board members combined. Present board members own a total of 115,796 shares. Even when the 226,223 shares of the Edward J. Noble Foundation (controlled by ABC board members) are included, Mr. Simon still has personal control of more shares than all directors combined.

ABC director Alger Chapman is executive director and a trustee of the Noble foundation and Robert H. Hinckley, another ABC board member, is also trustee of the Noble shares.

One report last week suggested that Mr. Simon was negotiating to acquire the Noble foundation interest. Mr. Hinckley said he had no intention of advising the foundation to sell its ABC stock, or for that matter, of selling his own. He expressed confidence in present management "on the basis of its great performance." Mr. Hinckley has been intimately identified with ABC since its original acquisition from NBC by the late Mr. Noble, a close associate. He personally owns a substantial number of ABC shows.

It was reported from one source close to ABC that Mr. Simon had expressed a tentative interest in Noble foundation shares two years ago but that no recent overtures have been made.

Mr. Simon praised ABC's management last week, suggested that the company's affairs were running favorably, but was careful to add that things could change.

Wall Street analysts who doubted Mr. Simon would settle for less than eventual board membership pointed to his activities in other companies. In the words of one analyst: "He moves in quietly and then all hell breaks loose."

The Simon Pattern = Several pointed to the pattern he displayed in gaining control of Wheeling Steel. He's now board chairman of that company with approximately 10% of its stock. After initial small purchases of Wheeling stock in 1962 he gradually built his holdings to 7% of the company and asked for board representation, holding the threat of a special meeting of shareholders over management's head. He won his board seat, got other representatives onto the Wheeling board and eventually became chairman.

Some Wall Street observers thought Mr. Simon would be willing to remain outside of ABC affairs if the company continues its present rate of growth. Last week ABC reported record six-month earnings (see story this page).

The Ratings = Several analysts mentioned the importance of the ratings for ABC-TV programs in the future attitude of Mr. Simon toward ABC. One said: "I don't think Simon will move before the fall ratings." If the ratings take a tumble, he said, Mr. Simon might go into the open market and do more buying or even make an open tender for ABC shares.

ABC stock was trading around $55 last week, making the paper value of Mr. Simon's McCall-Hunt holdings approximately $22 million. At the $55 price it would take an investment of $127 million to gain 51% control of the company, $105 million more than Mr. Simon's present paper holding.

ABC earnings continue climb

Coming season TV business at highest for this time of year

American Broadcasting Companies Inc. last week said the firm reached record earnings during the second quarter and first half of the current fiscal year. Estimated earnings from operations during the second quarter exceeded those of last year by $920,000 during the same period. Net earnings, with capital gains, during the first half of 1965 exceeded those during the first half of last year by $2.23 million.

ABC said that TV network sales for the coming season are at the highest level ever for this time of year, adding that they are ahead more substantially and on a firmer price basis than last year. The reason for this stabilization

**FINANCIAL REPORTS**

**Is Simon out to get ABC?**

Denies plan to take over, but some Wall Street analysts doubt him

Continued buying of American Broadcasting Companies stock by financier Norton Simon has revived speculation that the multimillionaire industrialist will make an all-out effort to gain representation on the ABC board and, perhaps, eventually make a bid for control of the company.

ABC and Mr. Simon, now the company's largest single shareholder with 400,000 shares, or 9%, were keeping their own counsel last week with regard to the possibility that Mr. Simon would once again seek a voice in the affairs of the company.

Outlet splits stock

Stockholders of The Outlet Co., Providence, R. I., last week voted approval of a two-for-one stock split. The move, taken at a special meeting, increases the number of outstanding shares from 506,100 to 1,012,200.

The Outlet Co.'s board of directors had earlier revised the annual dividend payments of $1.20 with quarterly dividends of 25 cents and a 20 cent year-end dividend, to $1.25 on old stock and 62½ cents on new thus discontinuing the year-end extra dividend and increasing quarterly payments. The 1966 dividend will be equal to $1.30 on existing shares and 65 cents on new shares with quarterly payments of 16½ cents a share.

Diversification ups

Rollins net 94%

Rollins Inc., Wilmington, Del., announced last week that revenues, earnings and cash flow hit record highs for the fiscal year ended April 30. Rollins also predicted revenues for the first quarter of the new fiscal year would reach $18 million. The group-station owner with diversified nonbroadcasting interests disclosed that per share earnings have increased at a compound rate of 45.5% since the firm "went public" four years ago. Rollins' revenues for the first quarter of last year were $3.2 million, as compared to the present outlook of $18 million.

Revenues during the past fiscal year exceeded those of a year earlier by 369% or $33,683,364 while earnings were up 94% or $844,512 and cash flow increased 201% or $4,359,130. Per share earnings increased 87% or 27 cents per share comparing the two fiscal years. Rollins split its common stock 3 for 1 on January 25 of this year.

To begin the current fiscal year Rollins purchased Arwell Inc., Waukegan, Ill., pest control firm.

Who bought those

100,000 CBS shares?

Reports that conservative Texas millionaire H. L. Hunt had purchased 100,000 shares of CBS stock were denied last week by the brokerage house said to have handled the sale.

Mr. Hunt had been mentioned as a participant in a plan by a right-wing group, Medias Unlimited, to gain control of CBS Inc. and thereby direct the company's networks and stations to more conservative program policies. Medias Unlimited is headed by David Dye of Lubbock, Tex., who has initiated a plan under which a large number of people would purchase relatively small amounts of CBS stock and turn their proxies over to him (BROADCASTING. June 28, et seq.).

The Wall Street house of Oppenheimer & Co. acknowledged it had purchased 100,000 shares of CBS but disclaimed any connection with the Texas group.

Oppenheimer said "reports linking [us] with Texas interests purportedly attempting to gain control of CBS are without foundation. The firm did purchase 100,000 shares of CBS recently on behalf of one of its clients."

The brokerage house would not say whether the purchase had been made for an individual or an institutional client. An Oppenheimer representative did, however, deny the buyer is from Texas. CBS said it did not know who had bought the 100,000 shares.

At $35 per share a 100,000 block of CBS last week was worth about $3.5 million on the open market.

WIIC(TV) cited in Cox's

first-half earnings

Cox Broadcasting, Atlanta, reports first-half earnings are 42% ahead of the same period last year based on a 44% increase in gross revenues.

The group station owner says all of its properties showed increased earnings in the first half. The recently acquired WIIC(TV) Pittsburgh is reported to have contributed significantly to the profit picture.

Cox said that Buckeye Cablevision. Toledo, Ohio, of which it owns 45%, will soon begin construction of a community antenna TV system in Toledo. Plans for the system call for installation of 745 miles of cable.

New rates for Early Bird

They set shorter periods of use and longer time for off-peak charges

The Communications Satellite Corp. and four international common carriers have filed new tariffs with the FCC covering charges for use of the Early Bird satellite for trans-Atlantic television. They are schedule to be effective today (July 26).

The new tariffs, by providing for shorter minimum periods of use and longer periods of off-peak time, meet some of the objections the networks raised against the tariff originally filed by Comsat on May 28 (BROADCASTING, May 31).

Comsat told the commission that the cost to the users will be lower than they would be under the May 28 tariff, even though Comsat's new rates are somewhat higher on an hourly basis.

Comsat's rates will be paid by four carriers temporarily authorized to offer satellite TV services. The carriers' rates are paid by the broadcasters using the international system.

The carriers, which filed a joint tariff, are American Telephone & Telegraph Co., ITT World Communications Inc., RCA Communications Inc. and Western Union International Inc. The commission authorized them to provide service on a rotating basis pending a determination as to which company should be designated as a carrier for TV signals.

Meanwhile, Comsat's original tariff, intended to apply to the company authorized to deal directly with it, remains under study at the commission.

Markup: The carriers' tariff contains a markup on Comsat's charges and contains costs for transmitting signals between New York and Early Bird, via the station at Andover, Me.

The European members of the communications system were expected to announce charges for use of their part of the system on Friday (July 23).

The new rates filed by the carriers provide for a minimum time use of 10 minutes and for increments of consecutive individual minutes. The original Comsat tariff provided for a minimum time period of 30 minutes and for 15-minute increments.

The networks had complained that they would not normally require Early Bird for 30 minutes at a time— that most of their trans-Atlantic programs would be short news programs. The Europeans are expected to make available 10-minute TV services on their leg.

The tariff provides for a charge of $2,150 for the first 10 minutes of one-way, black-and-white service during nonpeak hours. Each additional minute will cost $45. Two-way black-and-white service in off-peak hours will cost $3,250 during the first 10 minutes and $65 for each additional minute.

The cost of peak-time use is $3,500 for the first 10 minutes of a one-way black and white service and $60 for each additional minute. Two-way black and white service during peak hours will cost $5,300 for the first 10 minutes and $95 for each additional minute.

Off-peak-hour transmission of color service one-way, will cost $3,150 for the first 10 minutes and $60 for each additional minute. Peak-hour costs will be $5,200 and $90.

Peak Hours: Off-peak hours will be 5-7 a.m. and 4-9 p.m., Monday through Friday, and 5 a.m. to 9 p.m. on Saturday and Sunday. Peak hours will be 7 a.m. to 4 p.m., Monday through Friday.

In Comsat's original tariff, peak hours during the week are limited to 8 a.m. to 2 p.m. But Saturdays and Sundays were also listed as peak periods.

In a letter to the commission accompanying the tariff, Comsat said the new rates "will result in some minor increases and decreases in charges, depending upon the length of use," but overall, because of the shorter minimum time period, charges will be lower.

The carriers, in filing their joint tariff, stressed that their proposed charges are based on limited knowledge of costs and problems involved in providing trans-Atlantic TV service by means of a satellite. They noted, accordingly, that the rates "will be reviewed after sufficient experience has been gained."

Who should control CBC's French networks?

French-language radio and TV networks of the Canadian Broadcasting Corp. should be controlled by the Quebec provincial government, rather than the Canadian federal parliament, delegates to the French-Canadian Junior Chamber of Commerce decided at Quebec City earlier this month.

A resolution was passed by a large majority to ask the Quebec provincial government to establish a state board under the Quebec Minister of Culture to run French-language radio and TV in the province. The French-Canadian Junior Chamber of Commerce was formed about a year ago when the Quebec section of the Canadian Junior Chamber of Commerce split from the national body.

BBG head to stay on job

Dr. Andrew Stewart, chairman of the Board of Broadcast Governors, the Canadian regulatory body, has agreed to continue as chairman until new legislation on broadcasting goes into effect. According to Prime Minister Lester B. Pearson, Dr. Stewart's term of office was up this year. The government expects the report of the Royal Commission on Broadcasting this fall. Legislation based on its recommendations will be introduced after Parliament reassembles on Sept. 27. It will probably be early next year before new legislation on broadcasting becomes effective.

BROADCASTING, July 26, 1965
Hoopla begins for fall TV season

ID'S, SPOTS USED IN ON-AIR

At a rate conceded by those involved to far surpass previous efforts, the three TV networks have begun to promote their 1965-66 prime-time schedules. The extensive on-air summer promotions, officials agreed last week, were being used in the light of two main situations: the close ratings in the season just passed; and the same opening week (Sept. 13) in the fall for all the networks.

NBC-TV got off to a head start, beginning its on-air promotion on July 5 and using a theme of "NBC Week." All available minutes in programs this summer are being filled with one-minute promotion announcements, and 9-10 second promos are slotted between network programs. The saturation campaign for the new season on NBC-TV, said one spokesman, will be interrupted only by occasional recognition of the Gemini-Titan 5 manshot scheduled next month, of the fall football projects (National Collegiate Athletic Association and American Football League) and Tonight show, among other special programming aspects.

Similar to NBC-TV's approach, CBS-TV and ABC-TV will fill whatever unsold one-minute time remains in network programs. By August, there'll be teasers and trailers on all CBS programming set for the fall. ABC-TV, which declined to give details, indicated it expected all of its on-air promotion to be "at least" comparable with that of the other networks.

High Value • Promotion personnel at the networks said they could not peg costs for the saturation effort, noting that the periods in prime time alone represented an incalculable dollar value. Production costs, it was indicated, are above the levels of previous pre-season outlays.

The 10-second network identification promo carries along the NBC Week theme, with a series of 10-second ID's also emphasizing a "count-down" of so many weeks left before the start of the season. The one-minute spot features the programing for each night of the week. All NBC promo's are in color. In addition, radio spots have been sent to affiliates, along with the TV promo's. CBS-TV and ABC-TV both began their promotional activity around July 15 and will step up the intensity as the summer wanes and the new season approaches. CBS by Aug. 9 will be sending affiliated stations about four promotional kits daily. The kits include films, slides and photos for on-air promotion locally. Some promo's prepared by CBS are in color (for shows which will be shown in color on CBS in the fall). Theme of the CBS on-air push: the tune of "Hey Look us Over" with special lyrics and art work for visual effect.

WCKT(TV) gives its reps some fun in Miami sun

Instead of the rep wooing the station, WCKT(TV) Miami congratulated its station representatives on exceeding the July and August sales goals with a weekend of "fun in the sun." However, there was a second reason for the 12 men representing Harrington, Righter & Parsons, New York, and Bomar Lowrance, Atlanta, going to Miami: WCKT wanted to prove that with the thousands of tourists visiting Miami and the percentage of resident viewers higher than at any other time of the year, there is no reason to have business drop off in the summer.

Among the weekend festivities: fishing, golf and two dinner parties.

Hurricane booklets available

What do two square red flags with square black centers mean? Persons living near great bodies of water would know this if they had a copy of WTV (TV) Tampa-St. Petersburg, Fla., booklet, "1965 Hurricanes." The 34-page booklet describes hurricanes' causes, where their greatest damage may be, how the most deaths will occur and how to prevent injury. It gives maps of the most common areas for hurricanes and the geographic coordinates throughout the area for tracking. The booklet, in its eighth year of publication, is distributed throughout the Tampa area.

Drumbeats . . .

Team support • Last Friday (July 23) KTVH(TV) Hutchinson-Wichita, Kan., sponsored the U. S. National Team Track and Field Meet to help defray the team's expenses for their trip to Kiev,
Broadcast Advertising

Hearing cases

**DESIGNATED FOR HEARING**

- Commission designated for hearing application by Abram Rosebrock, tr/isa Jeffery Radio Co., for license to cover CP of KABE Westwego, La. Issues include determination of facts and circumstances with respect to financing construction and operation of station, whether permittee excused adequate supervision thereof or needed control for commission consent, and whether filings with commission relative to financing and operation of station contained misrepresentations or omissions of facts. Chief of Broadcast Bu- reau was ordered to review and determine particulars to applicant setting forth basis for issues. Action July 14.

- Commission designated for consolidated hearing following applications for only FM channels in eastern area, for which new permittee excused adequate supervision thereof or control, five AM’s, one FM and five newspapers in Pennsylvania: Huntingdon Broad- casters Inc., Huntingdon, Pa., channel 296 (166.1 mc), and CLEA- derdale Clear- field Corp., channel 276 (166.1 mc), and Clearfield Broad- casters Inc., channel 228 (83.5 mc). Issues are to determine whether grant would create concentration of control of mass media communication and whether Huntingdon proposal represents efficient channel use. Commissioners Hyde and Lee dissented. Action July 14.

**OTHER ACTIONS**

- By order, commission denied application by Hartford County Broadcasting Corp. for renewal of WMPF’s permit to extend operation of station which had been denied in 1958 for failure to show need for renewal. Action June 24.

- By order, commission granted application by Abacoo Radio Corp. for renewal of Brookville FM station, which had been denied in 1960 for failure to show need for renewal. Action June 24.

- By order, commission granted application for change of call letters for WMPF from WMFB, New Haven, Conn., to WMPF, New Haven, Conn. Action June 24.

- By order, commission granted application for change of call letters for WMPF from WMFB, New Haven, Conn., to WMPF, New Haven, Conn. Action June 24.

- By order, commission dismissed action for renewal of license of WOKS Milford, Del., and changed issue 4 to add “and rea- sons for failure to file annual financial report for 1964.” Action July 19.

COMMUNITY ANTENNA FACILITIES ACTIVITIES

The following are activities in community antenna television reported to Broadcasting through July 21. Reports include applications for permission to install and operate CATV's and for expansion of existing CATV's into new areas as well as grants of CATV franchises and sales of existing installations.

Indicates a franchise has been granted.

Wbens, Ala.—Athens TV Cable Inc. (William L. Schmidt, owner) has applied for a franchise. Subscribers will pay $25 monthly and a $1,000 comb, annual. Holladay also gave alternative of $1,227, $262. Salt Lake City; add 247. Salt Lake City already has FM channel 861. (July 7.)

Carrollton, Ky.—Titan Broadcasting Corp. has applied for a franchise to install and operate CATV's and for the operation of motion picture theaters. The firm will use the facilities of Illinois Bell System. (July 7.)

Petterson, Ill.—General Electric Cablevision Corp.,subsidiary of GE Electric Co., has applied for a franchise. The firm, through WPRL-AM-FM Freeport and WREX-AM-PM (Wilton, Ill.), is a subsidiary of the Gannett Co.

Mattoon, Ill.—Prisma Amusement Co., operator of the local moving picture theaters, has applied for a franchise. The firm currently operates CATV in Effingham, Ill. (July 7.)

Peoria, Ill.—Peoria Cable Television Inc., represented by William A. Hays, has applied for a franchise. The firm, through KPIX-TV (Westinghouse Broadcasting Co.) and KRON-TV (Chronicle Publishing Co. [San Francisco Chronicle]), both San Francisco.

San Bernardino, Calif.—City council has rejected an application of Empire Cable TV Co. and Storer Cable TV Inc. (Storer Broadcasting Co., a subsidiary of General Electric) Inc. has applied for a franchise. Subscribers will pay $20 monthly and $250 annual for installation, and will receive 3% of annual gross receipts. (July 7.)

Contra Costa county, Calif.—Franchises have been granted to Cable Vision North, Crockett Cable TV System and Walnut Creek Cable TV Inc. Applications have also been filed by KPIX-TV (Television System) Inc. and KRON-TV (Chronicle Publishing Co. [San Francisco Chronicle]), both San Francisco.

Pruitt's Col.,—Community Television Inc. has been granted a 10-year franchise. Service must be available within one year or the ordinance will be void. (July 7.)

Goodland, Kan.—Robert E. Schmidt, Hays, Kan., has applied for a franchise. Mr. Schmidt has a 40% interest in Keys Inc. Stations (KLOE-AM-TV Goodland and KLOE-FM Hays). Proposed system—Proposed system, which will bring in at least seven TV signals, would cost an estimated $100,000. (July 7.)

Beaver Dam, Ky.—See Hartford, Ky. (July 7.)

Maglewood, Ky.—Clearview TV Cable Co., Russell, Ky. (William H. McNichols, president) has been granted a franchise. The firm will receive the city $4600 outright and 3% of the annual gross receipts or $2500, whichever shall be the lesser. Proposed system—Proposed system—Proposed system, which will bring in at least seven TV signals, would cost an estimated $100,000. (July 7.)

Hartford, Ky.—Western Television Co., 100 College St., Bowling Green, Ky., has applied for a franchise in Beaver Dam and Hartford. The company also plans to build three CATV's in Russell. (July 7.)

New call letters requested

Roanoke, Va.—Roanoke Telecasting Corp. Requests WRTF-TV. (July 7.)

Duluth Television Corp. Requests WDVU-TV. (July 7.)

WPTV-ABC West Palm, Fla.—Horse- tooth Broadcasting Co. Requests KFMY. (July 7.)

WCTA-FM Andalusia, Ala.—Andalusia Broadcasting Systems Inc. Requests WRRC. (July 7.)

WJMJ Philadelphia—Rust Craft Broadcast- ing Co. Requests WPPG-TV. (July 7.)

WJMJ-FM Philadelphia—Rust Craft Broad- casting Co. Requests WPPF-FM. (July 7.)
Spot TV’s whirlwind salesman

During his 13 years in the broadcasting business, Ted O’Connell has held seven different jobs. His assignments have shuttled him several times back and forth between New York and Chicago.

But Mr. O’Connell is by no means a “job-hopper” in the conventional sense of the phrase. His entire TV-radio career has been with the CBS organization, which has a penchant for testing young men-to-watch in a variety of different posts before elevating them to top-rung executive positions.

Apparently, Mr. O’Connell has acquitted himself most creditably in what has come to be known as the “CBS farm system.” Last October, short of his 36th birthday, he was appointed vice president, CBS Television Stations National Sales, the group that represents the five CBS-owned TV outlets for spot business.

Importance of Spot TV • He speaks easily and knowledgeably of spot TV’s role in the advertising community, and is confident that the medium will continue to flourish despite certain competitive developments.

“For some time, the TV networks have been selling aggressively to advertisers who had been regular spot customers,” Mr. O’Connell pointed out. “There have been increased uses of regional networks and expanded use of piggyback commercials. All of these factors have tended to keep us on our toes.”

Mr. O’Connell stepped into his current post at a time when his sales and executive skills were to be tested most strenuously. It’s axiomatic that a key consideration in spot business is the TV network with which stations are affiliated. Last fall and winter a close battle developed among the three networks for audience supremacy with CBS-TV, NBS and ABC-TV virtually tied in the national ratings.

“But I’m happy to say that spot business at our stations nevertheless continued to be good,” Mr. O’Connell commented.

Spots and Color • He is optimistic regarding prospects for 1965-66. He believes that the move to color on the local and network levels will be a catalyst for expanded business on a long-range basis.

The proliferation in color programing and advertising on the networks, he said, will be accompanied by a build-up in color at stations throughout the country. An informal survey by his organization indicates that spot advertisers are planning to widen their participation in color.

“The best estimates we have after checking leading advertising agencies and advertisers throughout the country is that by this fall there will be 160 advertisers using color on a national and regional spot basis,” he reported. “By January 1966, the number of companies planning to use spot advertising in color should rise to about 290.”

Mr. O’Connell noted that the five CBS-owned TV stations will be able to transmit color by this fall. They will be equipped to originate local live color by the fall of 1966.

“We feel confident that the increase in local color is going to offer more opportunities for local and national spot advertisers,” Mr. O’Connell ventured. Aside from planning for an upsurge that color hopefully will engender, Mr. O’Connell, along with other spot TV executives, maintains a busy schedule aimed at bringing new advertisers into the medium and keeping old-line customers signed on the dotted line.

Busy Schedule • “Since the first of this year, our organization has had talks with and made presentations to 70 out of the top 100 advertisers,” he reported.

In recent weeks CBS Television Stations National Sales has been concentrating its efforts on the automobile industry. He believes that the auto business, which in recent years has invested the bulk of its color dollars in network, is a logical area for development by the spot field, and adds:

“We have been stressing to car manufacturers that through the use of spot TV, they can develop a better reach and frequency pattern on a market-by-market basis. The outlook seems promising in this field, particularly since the growth in color will give us another dimension to sell auto companies as well as other advertisers.”

Mr. O’Connell is pleased with the sales pace in daytime periods, which continues to be “good,” he remarked. His staff has been devoting considerable time and energy to keeping prime time sold, with particular emphasis on 10, 20 and 30-second availabilities.

“Prime-time minutes, of course, are in heavy demand and there is no problem here,” he explained. “Selling the shorter-length time periods has been more difficult, but I can say that we have been relatively successful.”

Mr. O’Connell noted improved business during the past year from retailers and described this category as one that “shows promise of continued growth.” His organization is stepping up its sales presentations to retailers throughout the country to consolidate the gains that already have been made.

Traveling Executive • Colleagues confide that Mr. O’Connell maintains a whirlwind travel schedule, leaving his New York headquarters frequently for business trips to CBS-TV National Sales branches in Detroit, Chicago, St. Louis, San Francisco and Los Angeles. Outside of secretarial help, Mr. O’Connell supervises a staff of 35 executives involved in sales, research, promotion and related services.

“Ted has shown growth potential in every job he has held with CBS,” an executive who has been close to him over the years reported. “He has tremendous drive and energy, though he is not a super-talker.”

“He is a thoughtful man and thinks before he talks and acts. But when he does, he moves quickly. He has shown too that he can get along extremely well with both people in the CBS organization and with clients and prospective clients.”

WEEK’S PROFILE

Broadcasting, July 26, 1965
Moment of truth

If the 44-man board of the National Association of Broadcasters had attended the annual convention of the National Community Television Association in Denver last week, a swifter solution of the CATV problem would be possible.

Most broadcasters would have seen themselves in another era—when they were younger, leaner and hungrier. It was the era during which they were seeking to establish themselves as members of the communications elite, against the onslaughts of many newspapers, do-gooders and advocates of government ownership. And when newspapers were told: "If you can't lick us, join us," many did in droves.

There were about 1,500 in Denver for the NCTA 14th annual convention—about the number that attended NAB conventions two decades ago. Included were many broadcasters of the first flight, and a good many ex-broadcasters. There were also numerous lawyers and bankers, possibly following the thesis that money goes where money is.

There was an uncommonly interesting exhibit of equipment that excited cable operators and prospective operators. Advances in equipment quality and design, including an around-the-clock news channel using AP radio wire service, piqued imagination as to the future in programing over cables.

Enlightened cable operators realize they're in a fight, not only with television broadcasters but with copyright owners and syndicators and with various telephone companies. They are shooting for more than they can possibly hope to achieve, but they are confident the public wants their service and that the public won't be denied by Congress, the FCC or the courts.

They know that an important segment of the public is willing to pay a fee for good diversified television service. CATV operators won't be able to get all they want—and shouldn't. Nor will their opposition be able to legislate or regulate them into oblivion.

The prudent, sensible, tidy way of meeting what now is a stalemate would be for the NAB and NCTA to promptly resume their interrupted negotiations and come forward with a plan under which each can live and benefit. It is a job for cool heads.

If an accommodation cannot be reached, the outlook is bleak indeed. There will be litigation, legislation and inevitable regulation from which neither side can benefit, nor can the public.

Wall-to-wall boredom

Dick Salant, vice president of CBS Inc. and former president of CBS News, has raised a point about television's coverage of political conventions that is valid and, regardless of competitive considerations, ought to be faced and settled before the 1968 conventions come around.

It is time, Mr. Salant suggests in a speech reported elsewhere in this issue, for television to re-examine its convention coverage practices and decide whether gavel-to-gavel preoccupation is justified.

The politicians who arrange and attend conventions want maximum exposure on TV. Because television is a regulated business their whims probably get more attention than nonbroadcast news media would give them. But coverage of some of the "programming" they concoct in their efforts to get maximum exposure is defensible possibly on entertain-
Get great pictures...week after week...without fiddling or fuss

Here's a new system of matched RCA film equipment, planned with an eye to automated operation. Each element has been system-designed to perform to best advantage with all the others. RCA-designed projectors, camera and multiplexer make up the ultra-stable film island. Entirely new camera circuitry takes over the normal daily manual adjustments, so that once set, it can be forgotten—for a long time. It's ideal for turning out top quality film programs, promos, announcements and commercials, and includes the following:

**TP.66 AUTOMATED FILM PROJECTOR.** Cues itself, automatically changes burnt-out projection and sound lamps, can't ever lose a loop. Fully transistorized for top reliability. Offers conveniences for creative production including instantaneous start, projection of still frames, and reversing of film.

**TP-7 SLIDE PROJECTOR.** Provides for semi-automatic operation. Holds to a total of 36 slides. Dual-drum design, it projects standard 2x2 inch slides with excellent optical resolution and contrast. Single lamp source assures uniform image brightness.

**TK-22 TRANSISTORIZED CAMERA.** Works week after week without adjustment, for production of finest pictures. Latest technical features include 1½ inch big-picture vidicon tube, with electrostatic focus for ultra-stable performance. Automatically maintains control over black level, white level and gain. Modular construction affords fast service, greater reliability.
