HASTA LA VISTA BABY!

Terminate your Search for a Handi-Counter™.
We're going to blow you away with this offer!
*$100. off our full range Model 2810.

*Limited time only, no discounts and no trade ins. Made in the U.S.A.

$159.

Don't Wait,
This Offer Can't Last!
Reg. Price, $259

- Full range -10Hz to 3GHz.
- LCD display (daylight visibility).
- True state-of-the-art technology with the high speed ASIC.
- NiCads & Charger included.
- Ultra-high sensitivity.
- 4 gate times.
- Extruded metal case.
- Compatible with MFJ207.

Suggested options

TA100S:	Telescoping Whip Antenna	$ 12.
CC30	Vinyl Carry Case	$ 14.
BL10:	LED Backlight	$ 15.
BL28:	El Backlight for use in roomlight and low light	$ 45.
BG28:	Bargraph Signal Level Indicator	$100.
TCXO 30:	Precision ±0.2ppm 20 to 40°C temp. compensated time base	$100.

Universal Handi-Counter™ Model 3000, $375. and Bench Model 8030, $579. Both offer frequency, period, ratio and time interval.

MONITORING TIMES

December 1991

60 Years of Vatican Radio

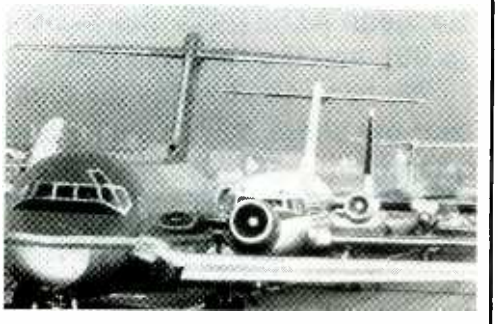
by Larry Miller **8**

It's a Christmas tradition at many houses — Mom and Dad surrounded by ribbons and wrapping paper and tags on Christmas Eve, listening to midnight Mass celebrated by the Pope with all the pomp and circumstance. But for thousands of people throughout the world, the live broadcasts by the Pope have been a daily source of inspiration, thanks to Vatican Radio's sixty years of broadcasting.

Flying High

by David Sutcliffe **12**

Seasoned aero listeners know there's no predicting VHF aircraft communications. There is no limit to what you might hear; Even the Space Shuttle has been heard hailing an old friend at a local airport on a Unicom frequency! This feature will decipher aircraft transmissions so you can practice monitoring routine communications. Then, when the great catch comes along, you can follow right along with the action.



My First Shortwave

by Salvatore Emma **18**

What a waste of a Saturday. Sal Emma vividly remembers the day he had to sort through all the hand-me-downs and clean out the closet: The day he discovered The Radio.

COVER PHOTO: Cloud photo by Harry Baughn

www.americanradiohistory.com

How to Start a Local Club

by Wayne Heinen **22**

It started with a handful of hobbyists, a sponsor, and a meeting place. Through trial and error, the Rocky Mountain Radio Listeners has grown in numbers, gained direction and increased in enthusiasm. What this club has learned along the way they now pass on to other aspiring clubs. Tip Number One: Be realistic and learn the pitfalls from others!

Monitoring Times 1991 Index **24**

And Much More ...

Did you hear about the unlicensed broadcast station sponsored by the Department of Defense? It's WKDT, "The Only Alternative," on the campus of West Point Military Academy. For prospective young officers, it's also "the only opportunity" to experience a brush with broadcasting (p.50).

If you enjoyed the article on aircraft communications and want more, you're in for a special treat as Plane Talk profiles Delta Airline communications (p.48). And the mysterious military traffic at the Las Vegas McCarran Int'l Airport receives more speculation this month at the hands of Federal File readers (p.46).

You'll find a super project this month in Experimenter's Workshop: an S-meter which can be utilized with virtually any receiver. And you can build it yourself if you'll turn to page 102.

Two respectable new receivers are reviewed this month: the Sangean ATS818CS shortwave portable cassette receiver (p.96), and the Realistic PRO-37 handheld scanner (p.98).

We hope you'll enjoy the time conversion wheel printed on the tear-out sheet. With a little assembly, UTC should never defeat you again!

LETTERS

What a year it has been! We thought it would be hard to surpass 1990 for drama, but the events of 1991 have proven the surprises aren't over yet. Still, few of us can sustain our global consciousness with ear glued to three radios for long. Eventually local concerns and daily living will impose themselves upon us once again.

And in that daily world with its mundane frustrations, you'd be surprised how many folks still get disgruntled trying to understand how UTC time relates to their local time. So behold our Christmas gift to our readers—a time conversion wheel. Credit for the original diagram goes to E.J. Gaspard of Creole, Louisianna, who donated it to Grove Enterprises. Use the wheel (which will be much more durable if encased in plastic) with our sincere wishes that all your times with radio are good ones.

Indulging in a bit more nostalgia, a letter from Leslie Edwards of Doylestown, Pennsylvania, starts out, "What an event it was to hear you and Judy and Bob Grove, interviewed by Kim Shippey of the Christian Science Monitor World Service at the Monitoring Times Convention in Knoxville on October 5. To hear the voices of people that I had only known through the pages of the magazine was a delight, and the expressions of support for shortwave radio were encouraging."

My mind was cast back to Knoxville not only by Leslie's kind comments, but also by a story from the *Knoxville News-Sentinel* sent by a couple of readers. The Knox County Enhanced 911 center, toured by many MT Convention attenders, has been plagued with problems since it was installed in 1987. Authorities suspect it's the work of "techno dweebs" (first cousins of computer hackers) who appear to do mischief just to prove that they can. But it is no laughing matter. Knoxville resident Hugh Winfrey worries that such shenanigans "may result in regulations that will hurt us all."

Mark Lefler of Athens, Tennessee, speculates that the latest concern arose after two deputies were shot in a remote section of the county. "Apparently their radios would not work in this area and they were unable to call-in for back up help."

The fact that unauthorized persons have access to both radios and programming software could pose a serious safety and security problem for the state-of-the-art system. Both the FCC and the FBI have been consulted.

Mark, however, is not so quick to blame radio problems on deliberate interference. He says, "When Motorola installed the system in 1987, they recommended that six towers/repeaters be installed. Knox County only installed four, so there are considerable dead spots."

A constant stream of such newsclippings come through the *MT* office. If there weren't so much at stake at times, it could be entertaining to watch our cumbersome legal system go into contortions to try to cover new knowledge and technology. Take, for example, this ruling from a Manhattan court reported in the *New York Law Journal* and sent by Paul Mitchell: Radio waves and the equipment that generate them are tangible property and therefore may be protected against criminal mischief and tampering; while the speed with which they travel — the frequency — is not tangible and therefore is not so covered.

The decision, though potentially controversial, shows some logical thinking. Not so learned was the lawyer who charged the defendant with "damaging the frequency" of the plaintiff.

"Obviously, whoever drafted the papers for New York State didn't read *Monitoring Times*," chuckled Paul.

So far Canada does not have an Electronic Communications Privacy Act to forbid monitoring of cellular communications, but Lambert Huneault of Windsor says that may change. He enclosed clippings from *The Windsor Star* which indicated that for the first time a judge in Canada has said a cellular phone conversation is subject to the wiretap provisions of the Criminal Code.

"Personally," says Bert, "I think this is a terrible ruling, as cellular phone conver-

RF SIGNAL DISTRIBUTION

Multiple signal monitoring in the .1 to 1000 MHz range

Increase your S/N before receivers using WI-COMM low noise (NF3dB) multicouplers
RC06 with better linearity
RC24 with better noise figure

Having (paging) interference problems while monitoring your scanner frequencies? Then consider WI-COMM super linear (IP55dBm) multicouplers
CRC11 for 30 to 500 MHz
CRC43 for 30 to 900 MHz

- 115/230VAC power supply
- 4-32 ouputs to receivers
- Rx-Rx isolation 20 dB
- Fixed gain 3-12 dB
- 19" rack mounted enclosure
- BNC/TNC/N/SMA connectors

LETTERS
continued

sations are radio communications — and if they are not scrambled there should be no expectation of privacy. The defense lawyer indicated that the ruling will probably be appealed...I'll keep you informed. But for the time being...the monitoring of cellular telephone conversations appears to have suddenly become illegal in this country."

Moving on to more cheerful communications, Bert says, "I am still quite active in shortwave monitoring, especially with my meteorology hobby. As you will note from the photograph, I now have Radiofax as well as RTTY monitoring facilities. The Universal M-900 decoder does a super good job of decoding RTTY and SITOR communications as well as printing excellent weather maps and satellite cloud pictures with the Seikosha 9-pin printer."

How are you doing on your reception reports this year? Back in the fall, Debra Emrie of Springfield, Missouri, asked if there was software available for translating reception reports. Evidently there is, because The Radio Collection has a software package called "The Language Assistant" in Spanish, French, German, or Italian in their catalog. I'm sure they'd be glad to give you more details on the program. Last month we inadvertently left out The Radio Collection's ad for the *World Radio TV Handbook*, so be sure to check out their ad and address on page 7.

Gordon Trigg of New Zealand writes with some good cautionary advice for Debra or anyone trying to use a dictionary for a word-for-word translation. Take translating English to the Philippine language Tagalog, for example. "The result would be unreadable, as the text would not make sense. There can be several suitable words to use for one English word, so which one do you use? Worse still there are English words not even covered in the other language."

Even with sophisticated computer software, Gordon reminds us that one's printer imposes severe limitations on what can be printed. If it can't print the alphabet, then Chinese, Japanese, Russian, and Arabic are all out of reach.

Gordon's best recommendation for language translations is to find someone who speaks the language. He writes out his report in English and then "I pay a visit to some of the Asian take-away shops. If you are a regular customer they are normally very willing to assist you... I find this is the safest way of sending a report or a letter as it avoids insults, has perfect or near as possible grammar, and where required, script. It also gets noticed at the other end where the receiver may not know English or may only have a limited grasp of English."

Thanks for those good tips, Gordon. "Asian take-away shop?!" Is that a repossession agency or a Chinese carry-out? You make a good point; the difference could be important!

Philip Ross of Allied Electric Supply Company in Southfield, Michigan, doubted a newspaper report we picked up about a "bullet" which zapped illegal cable boxes in Queens. So we checked it out and sure enough, American Cablevision snared 317 such boxes last April. They fired what they termed an "electronic bullet" which only disabled the illegal chip that had been enabling viewers to receive the premium channels. It seems the company obtained one of the illegal chips and took it to Tocom, the company that makes their converter. Tocom designed the electronic impulse to target that chip. When the customers brought their boxes in for repair, the company held the boxes for use as evidence in court.

Are you in a Christmas mood? From time to time we receive requests for the *Monitoring Times* from folks who are unable to purchase it themselves. *MT* readers and clubs have already shown their generosity, so we make this offer: If you are interested in sponsoring a DXer, write to *MT*. We will be glad to send you a copy of correspondence from anyone who has requested help. These are primarily from overseas, but not always.

Robert Bennett is a beginning radio

Cellular Ban Update — There's Still Time to Write!!

The proposal to ban the manufacture of scanners with cellular frequency coverage is now before the Senate. House Bill HR1674 passed without a dissenting vote. The Senate version of the Bill, S1132, does not contain the proposal to ban such scanners--yet.

But John Windhausen, counsel for Senator Ernest "Fritz" Hollings (D-SC) who is chairman of the Senate Commerce Committee deliberating the wording, feels that such a ban would enforce the Electronic Communications Privacy Act which makes it unlawful to listen in on mobile telephones.

If you have not yet written to your Senators, refer to last month's Closing Comments and write to to your two Senators, c/o U.S. Senate, Washington, DC 20510, and to the Senate Commerce Committee, 227 Hart Senate Office Building, Washington, DC 20510, urging them to reject the cellular frequency ban amendment in the House version of the Bill.

Barbies on the Air

Five year old Veronica Harrington is the country's youngest full-fledged ham radio operator. So says the respected *National Inquirer*. In a recent article, writer Joe Mullins gushed, "the tyke has ham operators far and wide chuckling when she's on the air gabbing away about her...Barbie dolls."

"I talk about my three Barbie dolls and about our neighbor's cat who brings me dead mice..." says Veronica. The precocious little rag-chewer is on the air for a half an hour a day.

Rosalie White, American Radio Relay League educational activities manager, says "we think [Veronica's] great! There are three other 5-year-olds that have their novice license but Veronica is the youngest to have a technician's tag which has a Morse code requirement."

Alleged Scam Rips Broadcasters

Law enforcement officials are on the lookout for Jerry Kautz, president of Imperial Transmitter Worldwide. According to *Radio World*, broadcasters were asked for a 50% deposit on used transmitters — amounts ranging from $1,000 to well over $10,000 — and then promised that the units would be delivered by company truck.

The trucks, as of press time, never arrived. Ironically, Kautz recently authored an article on used equipment for *Radio World* in which he warned broadcasters to "be careful about sending money." Three months later, says *Radio World*, "Kautz has disappeared and state and federal authorities are investigating the man and his business."

Detective Ike Brown of the McCook, Nebraska police department would not discuss the case but did confirm that he had received formal complaints of theft by deception or fraud against Kautz and his firm. Brown also indicated that a number of other complaints had been filed against Kautz for "misuse of financial transaction instruments" — primarily credit cards.

VOA Broadcaster Kidnapped

A Voice of America broadcaster was apparently abducted in broad daylight from the parking lot of the station recently. A group calling itself the Salvadoran Patriotic Directorate claimed responsibility.

According to reports, Isidro Olace, a Mexican citizen working for the VOA, left the station Sunday at 12:10 in the afternoon. Fifty minutes later Olace was on the phone to the Voice, telling them that he had been abducted. Shortly thereafter, the VOA received two letters demanding that the station broadcast a number of statements in return for Olace's release.

The VOA declined to read the manifestos over the air. "We of course don't do that," said spokesman Joseph O'Connell.

The FBI began looking for Olace until the following weekend when, on Saturday, he telephoned his wife to tell her that he had been released at National Airport and was taking the Metro to his home in Montgomery County.

The FBI says that it is "investigating ... aggressively" in cooperation with the D.C. police.

Giant Shortwave Transmitter May Save Earth

It sounds like an old Japanese "horror" movie from the 1960s but the Japanese Ministry of Posts and Telecommunications was quite serious when it signed an agreement with the University of Alaska to build a giant shortwave transmitter that could save the planet.

The Japanese PTT and the University will conduct joint experiments on using radio waves to protect the ozone layer. Under the agreement, a high-powered shortwave generating facility will be built in Alaska. The giant transmitter will then beam its signals some 40 to 100 kilometers above the earth.

According to officials in Kyodo, experiments have shown that when ozone-damaging chlorofluorocarbons (CFCS) are irradiated with short burst of high-powered shortwave, their chlorine atoms become chlorine ions, which do not affect the ozone layer.

There is no word on how the giant shortwave generator will affect shortwave reception or if the Japanese PTT will QSL.

I Won't Be Home For Dinner...

Journalism can be dangerous to your health. According to the Swedish newspaper *Sydsvenska*, some 36 journalists died last year. As of late October, 1991, (the most recent date for which figures are available) 41 journalists are known to have given their lives in pursuit of their professional duties.

Sydsvenska goes on to say that these figures may be misleading in that they represent only those reporters *known* to have died. "If a reporter from a major newspaper, news agency, television or radio network is missing, news of the

www.americanradiohistory.com

COMMUNICATIONS

MT Welcomes Your Input!!
Clippings should be addressed to Communications, c/o Monitoring Times, P.O. Box 98, Brasstown, NC 28902-0098.

disappearance is quickly spread around the world. Representatives of smaller organizations disappear in silence."

The most dangerous assignment in the world today is Yugoslavia where a French and a Swiss journalist hit a mine in Zagreb recently. A total of eight journalists have died in Yugoslavia alone.

ICOM Releases R7100

ICOM is now selling their new R7100, smaller than the venerable R7000, but with better specs including: higher sensitivity, 900 memory channels in 9 banks, 10 programmable search ranges, 24 hour clock/timer with 5 on/off times, eight tuning steps (0.1/1/5/10/12.5/20/25/100 kHz) and "Window Scan" (a programmable dual-function cycle).

Watch for a full review of this VHF/UHF receiver.

Radio Warning: Ghost Soviet Research Station

Ships plying the waters north of Alaska have been receiving radio messages from the Coast Guard, warning them that an ice floe carrying an abandoned Soviet research station and hundreds of drums of potentially hazardous chemicals is lost somewhere in the Arctic Ocean.

The island of ice broke loose from the Soviet coast during the summer and was last reported 56 miles north of Barrow. The Soviets have promised to remove the chemicals and buildings from the floe but bad weather has been making it difficult to locate by satellite or airplane.

"It's called `needle in a haystack' time," says Randy Crosby, director of search and rescue for Alaska's North Slope borough.

Intelligent Life? Not at This Office

Next October, after 30 years of searching the skies for signs of intelligent life in the universe, NASA will begin a decade-long search for radio transmissions in the 1,000 to 3,000 MHz range.

NASA's Search for Extraterrestrial Intelligence (SETI) project will use state-of-the-art receivers in a systematic, long-range observing program. In the first few minutes of the project, says a NASA spokesman, more searching will be accomplished than in the combined total of all previous SETI's.

In a complementary search, a sky survey will use the 34-meter antennas at NASA's Deep space Network (DSN) to scan the sky from 1,000 to 10,000 MHz. NASA promises to let us know if they are able to ring anyone up.

Ham Pizza

The FCC is reportedly contemplating a rule change that would allow hams to use their radios to conduct business on a no-interference basis. According to the *W5YI Report*, FCC Private Radio Bureau Chief Ralph Haller startled listeners during a recent speech when he said he was receptive to permitting a third type of non-amateur communications on the ham bands.

Haller suggested that frequency usage be arranged so as to give precedence to priority or emergency communications, as is the current practice. Primary communications would be normal ham operations and the new category, called secondary, might even give hams the right to conduct personal business, "including ordering pizzas."

Currently, ham radio is restricted to "self-training, intercommunications and technical investigation carried out by duly authorized persons interested in radio technology solely with a personal aim and without pecuniary interest."

Vatican Radio

Answering to a Higher Authority

By Larry Miller

It is officially called "Christian Messaging from the Vatican" but the news media quickly dubbed it "Dial-a-Pope." The Vatican, it seems, has authorized a fund-raising 900 number. "Now," according to promotional literature, "the Pontiff is available at any time of the day or night, in the privacy of your own home." Organizer Michael Fahringer crowed that he had "invented the world's first electronic collection plate."

While Mr. Fahringer, a former copy machine salesman, may indeed have invented the world's first electronic collection plate, his boastful balloon might have been deflated a bit if he had known that innovation is practically the Vatican's middle name.

When shortwave stations began taking punches from the worldwide recession, they cut back. English programs were taken off the air, staffs were reduced and some station vanished altogether. At the Vatican — itself in something of a financial straightjacket — they put their heads together, sighed, and began selling compact discs (CDs) of classical and sacred music. This, along with some prudent, but hardly noticeable belt tightening, once again turned the wolves from the door.

Nothing Vatican Radio does is second class, its $13.00 CDs included. When Pope Pius XI decided in 1929 to build a radio station, he turned to "the Father of Radio" himself, Guglielmo Marconi. Marconi set a high standard for Vatican Radio by personally constructing the station's first transmitter.

According to writer Erik Amfitheatrof, the idea that the Vatican should have its own radio station "was shaped by the violent events of 1870 when troops from the newly united Italian army invaded the Papal States, which covered most of central Italy."

"The Pope's troops were routed," relates Amfitheatrof, and the Pope, Pius XI, became "a prisoner of the Vatican." The tension continued until February 11th, 1929, when Benito Mussolini and the Vatican signed the Lateran Pact, establishing the 108.7 acre Vatican City-State.

Once forced to live within the bounds of St. Peter's Basilica, Pius XI now felt the need to step beyond Rome and reach the world itself. Less than two years later, the Pope — with Marconi looking on — was on the air. Stiffly and in Latin, Pius launched the inaugural broadcast in Old Testament style, saying "Hear and listen... oh distant peoples." Immediately, aides began translating the text of the speech into the world's major languages for broadcast later that same evening.

Vatican Radio journalist doing an interview.

The world did hear. In America, the *New York Herald* told its readers that "few events can match the impression of hearing the message of that the head of the Roman Catholic Church broadcast to the entire world." One man even wrote from Prague, Czechoslovakia, to say that, although deaf, he was able to hear the Pope's speech by running a wire from his radio to his teeth.

Some of Vatican Radio's initial programs were somewhat dry. One of the first was called "Scientiarum Nuncius Radiophonicus," a Latin report on the activity of the Pontifical Academy of Sciences. This was not totally unexpected. From the beginning, Vatican Radio had been staffed almost exclusively by Jesuits, traditionally the Church's intelligencia. But as the years wore on, the normally neutral, non-controversial Vatican Radio began to bravely face off against the Fascist government in Italy — the very government on which the station depended for such vital supplies as electricity to run its transmitters!

By 1938, Pius XI established the "Catholic Information Service" in an effort to combat what he saw as atheistic propaganda coming out of shortwave stations in Germany, Italy and the Soviet Union. As a result, Vatican Radio became an important source of information during World War II, "not withstanding the protest of the German diplomats, disturbances and censors." Goebbels himself, says official Vatican literature, "had sworn to silence Vatican Radio." He was never able to fulfill his vow, although over a dozen priests perished in concentration camps across Europe for collaborating with the station.

Vatican Radio did provide a number of services during the war. It claims to have been the first station — despite its reputation for neutrality in secular state affairs — to denounce the Nazi concentration camps. On January 23rd, 1940, an American Jesuit named Coffey reportedly told the world that "Jews and Polish prisoners are being enclosed in new ghettos, tightly sealed..."

During the following six years, the Vatican became a clearinghouse of information between prisoners-of-war, displaced families and their loved ones, transmitting some 1,240,000 personal messages. Broadcasts of Vatican Radio were transcribed and secretly distributed by the French resistance.

Like a teenager who takes on heavy manual

www.americanradiohistory.com

labor for the summer, Vatican Radio emerged from the war years with some serious muscle. Now it was a major powerhouse, both in terms of transmitters and number of languages. By 1949, it was broadcasting in 19 languages and, in order to accommodate this growth, began the construction of a new transmission center.

Located some 20 miles north of Rome, the Santa Maria di Galeria transmitter center is located on a 4.5 acre plot originally owned by St. Ignatius and set aside for the Jesuits. It was inaugurated in 1957 and by 1958, the year in which Pope John XXIII was elected, was putting out broadcasts in 39 languages. To this day, it remains the starting point for virtually every signal that Vatican Radio sends out.

Reaching Out to the Faithful

Many people begin their day at 0630 UTC by listening to the Holy Mass, celebrated by priests who work at Vatican Radio. The Mass itself is still celebrated in Latin, the official language of the church, but the scripture readings are alternated in 13 different languages. The day ends with the Holy Rosary, broadcast live every day at 7:40 UTC.

In between, however, almost anything goes. The range of music alone is astounding, encompassing everything from Brahms to—no kidding—Elvis Presley.

In Rome, listeners can find any one of four Vatican Networks on the air. One, known as "Studio A," offers programs of light and classical music. In the evening, from sunset to sunrise, the station can be heard throughout Europe on 1530 kHz mediumwave (AM). By far, however, the bulk of Vatican Radio's audience listens to the "General Service" on shortwave.

According to the latest schedule, there is but one English transmission officially targeted to America. It is at 0250 UTC and can be heard on 9615 and 11625 kHz. Other English broadcasts to Africa, some of which can also be heard in America, are scheduled for 0500 UTC on 11625, 15090 and 17730 kHz; 0630 UTC on 11625, 15090 and 17730 kHz; 1730 UTC on 11625, 15090, 17730 kHz and 2100 UTC on 9645, 11625 and 15090 kHz.

Transmissions to Asia and the Pacific contain four English programs the enthusiastic listener can try for. These are scheduled at 0145 UTC on 11935 and 15090 kHz; 1345 UTC on 9615, 11830, 15090 and 17535 kHz; 1545 UTC on 15090 and 17865 kHz and 2245 UTC on 11830 and 15105 kHz.

Vatican Radio's 1st and 2nd Program (networks) are directed toward Europe almost around the clock. The 1st Program offers programs in a rainbow of the world's languages, each a snippet of news, information or music lasting between 10 and 15 minutes per language.

The 2nd Program concentrates more on the languages of the Baltics and the Soviet Union. Here you are likely to pick up programs in Byelorussian, Latvian and Armenian. Both networks are carried on shortwave and, with patience, can become a rewarding experience for the skilled shortwave listener.

Much equipment is required for remote broadcasts.

AM/FM DXING

SUPERADIO II

HIGH PERFORMANCE - LONG RANGE AM/FM PORTABLE RADIO

* Long - Range Reception
Air-gang tuning capacitor with tuned RF on AM and FM
976mm (38") swivel whip FM antenna
200mm (7 7/8") ferrite rod AM antenna
AM and FM external antenna terminals
* Station Selectivity and Seperation
Ceramic IF filter plus 3 IF Tuned Circuits on FM
4 IF Tuned Circuits on AM
AFC (Automatic Frequency Control) defeat switch for fine tuning adjacent FM stations
* Sound Quality
Two-way Speaker System - 6 1/2 "High - Sensitivity Woofer, 1 1/2 " Piezo Tweeter, 700 mw RMS audio output. Seperate Bass and Treble controls
* Other Features
Two-way Power - AC or DC operation (6 "D" cells/ batteries not included), 3.5mm Headphone jack, fold down carrying handle, One Year Limited Warranty, Dimensions:12.5"W x 10.5"H x 4.5"D

Only $54.95 + 6.50 Shipping/Handling

CHILTON PACIFIC LTD.
5632 Van Nuys Blvd., #222
Van Nuys, California 91401

Why buy a TNC?
PC HF FAX + PC SWL $119

SPECIAL COMBINATION OFFER

For a limited time, if you order PC HF FAX $99 (see our other ad in this issue), you can add PC SWL for only $20 instead of our regular low price of $99.00.

PC SWL contains the hardware, software, instructions and frequency lists needed to allow you to receive a vast variety of digital broadcasts transmitted over shortwave radio. All you need is any IBM PC or compatible computer and an SSB shortwave receiver. The product consists of:

Demodulator
Digital Signal Processing Software
80 Page Tutorial Reference Manual
World Press Frequency List
Tutorial Audio Cassette with Samples

PC SWL automatically decodes Morse code, Radio Teletype, FEC (forward error correcting code), SELCAL (selective calling transmissions), and NAVTEX.

PC SWL lets you tune in on world press services with up to the minute news, meteorological broadcasts, ham radio operators, coastal shore stations, aviation telex and much more digital action on the shortwave bands. Find all the utility station action you have been missing. PC SWL software uses the processor in your PC to do the work, why pay for another expensive box when a simple interface and your PC and do the job?

ADVANCED FEATURES:
Tuning Oscilloscope
Digital Waveform Presentations
Auto Calibration and Code Recognition
Continuously Tunable Filter Frequencies
Variable Shift
Adjustable CW Filter Sensitivity
Unattended Capture and Printing

Software Systems Consulting

www.americanradiohistory.com

The 1st Program is on 6245 kHz from 0150 to 2010 UTC when it changes over to 6185 kHz. Throughout the day, check other frequencies like 7250, 9645, 11740 and 15210 kHz. The 2nd Program can most often be found on 7365 or 9755 kHz between 0210 and 2100 UTC. Also check 6185 and 11715 kHz.

And so it is that after 60-plus years of operation, Vatican Radio "feels surprisingly young."

"We are happy," says Director General Fr. Pasquale Borgomeo S.J., "to proclaim faith in Christ, to promote unity within the church, and to serve the cause of man." "Perhaps," he continues, "this sense of energy and enthusiasm can be attributed to the springtime in Europe. The contribution that Vatican Radio made to ending Eastern Europe's long winter is known only to God."

Still, despite this buoyant statement of faith, Fr. Borgomeo expresses some apprehension. "We admit that Vatican Radio's future depends on the generosity of all those who want it to continue serving the Church and man." The Director General toasts the station's 60 years, saying "Ad multos annos! (*And many more!*)" but adds that "All those who join in making this wish...know that they can do something to ensure it comes true."

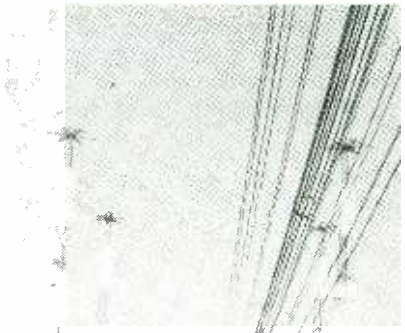
Pick up the phone and dial.

mt

Site Improvements

During the last ten years, the equipment at the S. Maria Aleria transmission center has been updated. The Vatican now boasts four 500 kw shortwave transmitters. A twin pair manufactured by Asea Brown Boveri (ABB), have a high rate of efficiency which reduces power consumption. They use Pulse Step Modulation (PSM), utilize solid state Gate Turn Off (GTO) devices and are equipped for Double Side Band (DSB) as well as Single Side Band (SSB) operation.

Three new curtain antennas were put into operation last year. Each uses optic fibers in the radiators, making it possible to give computer commands via a special coupling system, adapting them to the desired frequency and angle of radiation. This year, the Telefunken Company has begun installation of three more fixed band curtain antennas in an effort to improve the quality of transmissions to Eastern Europe, West Africa and Central America. — *Vatican Radio*



CHRISTUS VINCIT

The "Christus vincit," has been Vatican Radio's interval signal since January 1, 1949.

COMMUNICATIONS ELECTRONICS INC.

Emergency Operations Center has expanded to our new two acre facility and World Headquarters. Because of our growth, CEI is now your one stop source for emergency response equipment. When you have a command, control or communications need, essential emergency supplies can be rushed to you by CEI. As always, for over twenty three years, we're ready, willing and able to help. For 1992, we're introducing new products from Uniden, Shinwa, ICOM, Ranger Communications Inc., Grundig, Sangean, Magnavox and RELM.

NEW! Shinwa SR001-B

List price $799.95/CE price $479.95/SPECIAL

Continuous coverage from 25.000 through 999.995 MHz.

If you're looking for an excellent synthesized scanner designed for mobile surveillance use, the new Shinwa SR001 scanner offers features never before offered at such a low price. When you purchase this wide band scanner from CEI, you'll get a free infrared wireless remote control that allows you to control your scanner from over 20 feet away. Selectable frequency steps of 5.0/10.0/12.5/20.0/25.0/50.0 or 100.0 KHz. are available. Dual antenna inputs terminating in an "N-type" and "BNC" connectors are included. Other features include 200 memory channels grouped in 10 banks of 20 channels, easy to read multi color LCD display, lithium battery for memory back-up, 35 channel per second high speed scanning, priority, timer and even an alarm to alert you to transmissions on your choice of one special frequency. We even include a mobile mounting bracket. The SR001 can be used for base station use with the purchase of the ACS-B 12 volt DC power supply for only $34.95 each. A great sounding external speaker #SPE-B is available for only $24.95.

SHINWA POCKET PAGERS

The fire department hazardous materials response teams and police department SWAT crews that need reliable radio alerting systems, stake their lives on Shinwa. We offer a two-tone pocket pager with monitor feature and even a voice storage option at an affordable price. To order, we need your paging frequency as well as tone reed frequencies. For other configurations or two-way radio information, please fax us your specifications to 313-663-8888 or phone 313-996-8888.

ICOM ICR1-B

List price $799.95/CE price $529.95/SPECIAL

Continuous coverage from 100 kHz through 1.300 GHz.

The ICOM ICR1 keeps you in touch with the world when you're on the go. The palm-size ICR1 is equipped with AM, FM and wide-FM modes to fully answer your monitoring needs. With 100 memory channels and a dual frequency selection system, you get a top-class communications receiver. Not only can you program scan searches only for signals within a specified frequency range, it's also possible to write frequencies of received stations automatically into memory. In addition, unwanted frequencies can be skipped. Order ICBC72-B battery rapid charger for $99.95 and a BP84-B 1,000 ma. battery pack for $74.95.

ICOM ICR100-B

List price $799.95/CE price $579.95/SPECIAL

Continuous coverage from 100 kHz. through 1856 Mhz.

Now you can bring a wider world of broadcasting, VHF air and marine bands, emergency services and many more communications into your vehicle. Icom's advanced ICR100 fully covers all the stations worth hearing with up to 100 memory channels and a multitude of features.

Bearcat 200XLT-B

List price $509.95/CE price $239.95/SPECIAL

12 Band, 200 Channel, Handheld, Search, Limit, Hold, Priority, Lockout
Frequency range: 29-54, 118-174, 406-512, 806-956 MHz.

Excludes 823.9875-849.0125 and 868.9875-894.0125 MHz.

The Bearcat 200XLT sets a new standard for handheld scanners in performance and dependability. This full featured unit has 200 programmable channels with 10 scanning banks and 12 band coverage. If you want a very similar model without the 800 MHz. band and 100 channels, order the BC100XLT-B for only $179.95. Includes antenna, carrying case belt loop, ni-cad battery pack, AC adapter and earphone. Order your scanner from CEI today.

Bearcat 800XLT-B

List price $549.95/CE price $239.95/SPECIAL

12-band, 40 Channel, Nothing excluded in the 800 MHz. band.
Bands: 29-54, 116-174, 406-512, 806-956 Mhz.
If you do not need the 800 MHz. band, order the Bearcat 210XLT-B for only $178.95.

Magnavox® Satellite Phone

CE price $48,880.00/Special order - allow 45 days for delivery. When war broke out in Iraq, you heard all the action because CNN had a satellite telephone. When a disaster such as an earthquake or a hurricane strikes your community and communications are disrupted, you can depend on instant reliable communications, just like CNN did using your Magnavox MagnaPhone. Inmarsat communication satellites are in geostationary orbit along the equator. They beam two-way voice and data transmissions between your satellite phone and fixed earth stations. In most instances, telephone calls are dialed directly once you have selected the satellite serving your location. No matter where you are on the planet, the MagnaPhone automatically selects the Land Earth Station (LES) nearest the destination called. This makes placing a call as easy as using a standard telephone. Dual ID numbers permit a separate Inmarsat telephone number to be used to route calls to one of the external telephone ports which could be used for a fax machine or a computer data line. For telephone, telex, fax and data communications anywhere in the world, the new MX2020P MagnaPhone is the most compact Inmarsat-A, Class 1 terminal available today. Like a cellular phone, airtime will be billed to your account. The new MagnaPhone weighs just 47 lbs (21 kg), including the antenna. Add the optional ruggedized case (only $950.00) and it can travel as airline baggage on commercial carriers. When you arrive at your destination, installation can be done in less than 5 minutes. For more information call our Emergency Operations Center at 313-996-8888.

VHF Aircraft Communications

by David Sutcliffe

"Baltimore approach control, Cessna 5345 Alpha."
"Cessna 5345 Alpha, Baltimore approach go ahead."
"Cessna 5345 Alpha Liberty reservoir at three thousand five hundred with information Bravo, landing BWI."
"Cessna 45 Alpha squawk 4231 and ident."
"Cessna 5345 Alpha."
"Cessna 45 Alpha radar control contact twenty four miles northwest, turn right heading one four zero vectors to runway three three right, descend to two thousand."
"Cessna 45 Alpha right to one four zero, descend to two thousand."
"Cessna 45 Alpha traffic 1 o'clock four miles northbound altitude unknown."
"Cessna 45 Alpha traffic in sight."
"Cessna 45 Alpha position five miles south of BWI, contact tower 119.4."
"Cessna 45 Alpha."
"BWI Tower, Cessna 5345 Alpha five miles south for landing."
"Cessna 45 Alpha enter left base to runway three three right, number two behind the King Air on two mile final."
"Cessna 45 Alpha."
"Cessna 45 Alpha cleared to land runway three three right, caution wake turbulence United DC-8 heavy on short final three three left."
"Cessna 45 Alpha."

The interchange you have just read landed a Cessna aircraft at Balitmore-Washington International Airport.

Most modern scanners have the VHF aircraft band (118-135.975 MHz) included in their coverage. There is plenty of exciting radio traffic to hear, from the routine, to the dramatic, to the humorous. However, if you are not a pilot or an air traffic controller yourself, you can get stuck before you get started. How do you determine the active frequencies in your area? And how can you make sense of what you hear?

This article will explain how to find those frequencies and decipher that aviation jargon. For an example: "Mayday" is widely understood as the term for "Emergency!" But if you hear "Pan" (usually repeated three times) over the air, that means trouble, too. Urgent, but not quite bad enough to declare an emergency.

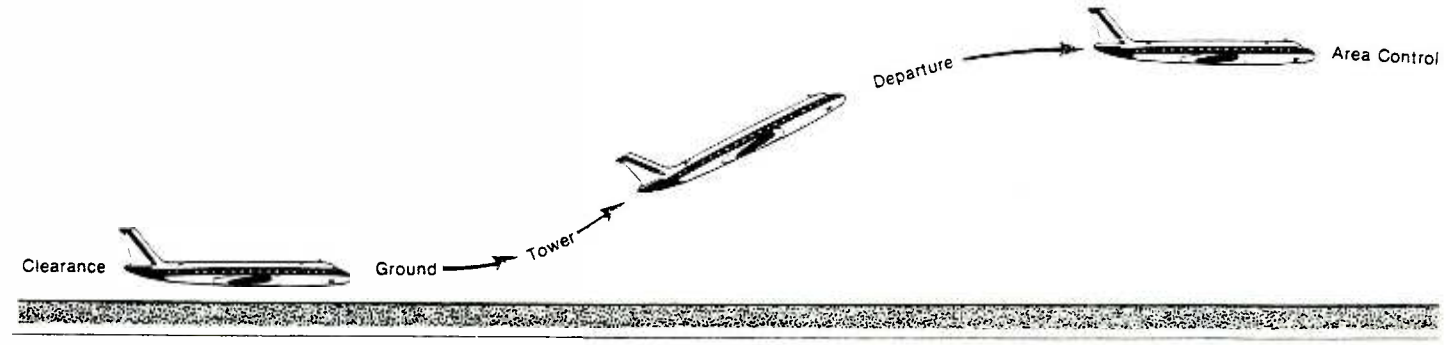

Figure 2: Air Traffic Control Flowchart

CLEARANCE DELIVERY FREQUENCY

• Information on assigned flight route, altitude and other details are provided the pilot on this frequency. At busy airports, this is usually the first channel on which pilot and controller communicate.

GROUND CONTROL FREQUENCY

• Instructions to the pilot for movement of the aircraft in the airport other than on the active runway are communicated on this channel. Clearance information is also given on this frequency at less busy airports.

TOWER FREQUENCY

• Also called "local control," this channel is used to communicate with departing and landing aircraft. When ready to take off, the pilot calls tower prior to turning onto the active runway. Tower is responsible for sequencing and safe separation of aircraft within a specified distance from the airport.

DEPARTURE CONTROL

• Provides separation and sometimes revised route and altitude information for the portion of flight between airspace controlled by Tower and Air Route Traffic Control Center. Departure control is primarily for aircraft flying under Instrument Flight Rules (poor weather and most airline operations) and in crowded airspace.

AIR ROUTE TRAFFIC CONTROL CENTER

• The safe and orderly flow of IFR flights and some aircraft operating under Visual Flight Rules (good weather - mostly non airline) is the responsibility of the "Center Controllers." Most airspace throughout the world is divided between these centers.

During a flight a pilot is typically told to change frequencies as he passes through different sectors (a center's assigned airspace is divided into areas and sectors). Where possible (ie. not in the middle of an ocean), aircraft are followed by radar.

www.americanradiohistory.com

The international emergency frequencies are 121.5 MHz (civil) and 243.0 (military). These are worth programming on your scanner. But most "Mayday" and "Pan" situations are not broadcast on 121.5 or 243.0 MHz. Most of the time, a pilot already has his radio set to an active communications frequency that is monitored by an FAA facility, airport operations desk or other aircraft. In a tight spot, the flier has enough to do without having to change radio channels.

What frequency the radio is tuned to depends on the phase and circumstances of the flight. If taking off from a small airport that does not have a control tower, or if the tower is closed (very few towers are staffed 24 hours a day), the channel used for that field will be a "Unicom" frequency. Unicom is a general aviation air to ground communication service. The most common Unicom frequency is 122.8, but the following advisory frequencies may also be used: 122.7, 122.725, 122.975, 123.0, or the Multicom frequency 122.9.

Relatively few airports have a control tower. According to the Aircraft Owners and Pilots Association (AOPA), of the 12,946 airports in the USA, only 693 had towers as of 1989.

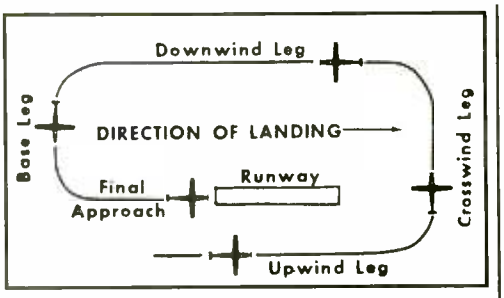

Figure 1: Standard Traffic Pattern

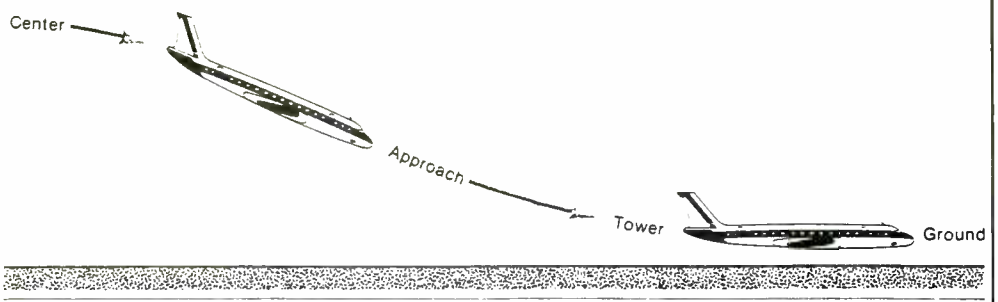
When flying from a field with an operating control tower there are a series of frequencies used. After listening to the Automatic Terminal Information Service (ATIS) frequency to get current weather and other data, a pilot departing a busy airport will transmit on the "clearance delivery" frequency.

Next is "ground control" for taxiing instructions from the "ramp" to the "active" (runway in use). When actually ready to take off, but before entering the "active," the "tower" frequency is used. In reality, all of these channels come from the control tower and sometimes the same controller covers more than one channel (when things are slow).



APPROACH CONTROL FREQUENCY

• Approach control is similar to departure control in function. In fact, sometimes the same controller at the same radar scope handles both functions. So-called "hand-offs" between all controllers in the system are done mostly by telephone lines between tower, approach/departure control and center facilities.

TOWER FREQUENCY

• A flight is handed off to tower by approach control at a predetermined point in the flight (decided by the approach controller). Most non-airline and other VFR flights will call tower directly about 10 or 15 miles from the field.

These flights have not been handled by approach/departure control or center controllers. Very busy areas such as Terminal Control Areas are an exception. All aircraft operating within this congested airspace are required to be in communication with approach/departure control for safe separation.

GROUND CONTROL

• After the plane lands and just as he turns off the active runway, he is switched over to ground control. When traffic is light, the same controller may handle both tower and ground control positions. Clearance delivery, ground control and tower controllers are all located in the control tower cab, usually right next to each other.

NOW YOU'RE TALKING!

The Code-Free Ham License is Here

Enjoy all Amateur Radio privileges above 30 MHz without having to pass a code test. All you have to do is pass a 55-question exam on basic radio and the FCC regulations. ARRL's new book, **Now You're Talking** makes understanding what is required on the test a snap! And there are exams given all over the country every weekend.

Just think how much fun you'll have communicating through repeaters, enjoy Sporadic E skip and worldwide communications on six meters when conditions are right. There's satellite communication and you can even talk to Astronauts and Cosmonauts in orbit. Enjoy friendly local communication both direct and through repeaters. Help with disaster drills and the real thing! Sound like fun? It is! Order your copy of **Now You're Talking** below: Enclosed is $19 plus $4 for shipping (a total of $23) or charge $23 to my ( ) VISA ( )Mastercard ( ) Discover ( )American Express

At some point during take off, "tower" will have the pilot change to another frequency. It could be "departure control" or he could say "freq change approved." This means the aircraft is outside his airport traffic area and the pilot is free to go to any channel he chooses.

When operating under Instrument Flight Rules (IFR), the radio traffic flows from "departure control" to Air Route Traffic Control Center ("center") to "approach control" for the destination airport. IFR is required for most airline flights or during poor weather flying, or when operating at or above an altitude of 18,000 feet.

Visual Flight Rules (VFR) are used for all other flights. However, many pilots will tune to "departure control" or other air traffic control channels even when flying VFR. This is a good way of keeping track of other planes near you. When they are not too busy, controllers give traffic advisories based on radar information to VFR flights (on request).

Figure 1 shows the standard traffic pattern flown at airports. Most of the time, planes enter on the downwind leg, turn base and then final approach.

A handy graphic showing the flow of Air Traffic Control (ATC) communications from take off to landing (for IFR flights) is shown in Figure 2.

Runways are identified by a number corresponding to the magnetic heading of the final approach course of the landing aircraft — but with the final digit omitted. So runway 22 is aligned with the magnetic heading of 220 degrees. Where there are parallel runways, there would be runway 22 right and 22 left (and even 22 center). Runway 05 would be aligned with the magnetic heading of 5 degrees. The other end of runway 22 would be its reciprocal, runway 04.

Finding Local Frequencies

The first step is to determine what large and small airports are within about 50 miles from your location. VHF being "line of sight," 50 miles is about as far away as you will be able to receive ground stations. If you have a great scanner, an excellent directional antenna such as Grove's Scanner Beam, and no major obstacles such as mountains or tall buildings between you and the airport, your chances of picking up more distant signals is greater. You will be able to hear planes from farther away when they are at higher altitude.

A good place to start looking for airports is with a road map and the Yellow Pages. Look for listings such as "Aircraft Charter, Rental & Leasing", "Aircraft Dealers" or "Aircraft Schools."

With the names and locations of the local airports, you now need to refer to aviation charts (maps) and other sources for the frequencies. The most basic is the *Sectional Aeronautical Chart* for your region. The sectional chart gives control tower, ATIS and Unicom frequencies for airports it covers. These and most other materials you might want are available from one of the places you found in the Yellow Pages. New charts are published every six months.

If you live too far from the airport (or just don't feel like driving over there) everything you need can be obtained from Sporty's Pilot Shop (Clermont Airport, Batavia, OH 45103). They will gladly mail you a free catalog with a toll free call to 1-800-LIFTOFF (543-8633). You will also find there a world of flying toys and necessities that are mailed the same day (phone orders accepted with a major credit card). If you don't know which sectional or other chart you need, call their "Chart Doctor" at 1-513-732-0856 and he will be happy to help.

The single best source for all frequencies in use at airports, the phone numbers of flying services and much more is AOPA's *Aviation USA*. This "gold mine" of information is available from Sporty's as well. The book contains a glossary of all aviation terms you will likely hear over the air, a section listing all aircraft (except big jets and military) with specs and prices and a similar listing of the "avionics" (two way radios, navigation systems, weather radar, etc.) on the market. These days, the "avionics" on a small plane may be worth more than the plane itself! The book costs $25.00 but is well worth it.

The "bible" of aviation is an FAA publication called the *Airman's Information Manual*. It covers everything from emergency procedures, Pilot/Controller roles and responsibilities, to radio communication phraseology and techniques. The *AIM* is also available at most flight schools and always from Sporty's. They are updated periodically; my last one cost $7.95.

A bargain, where frequencies are concerned, is the *Airport/Facility Directory* for your region. Also worth considering are the *Terminal Procedures Publications* (commonly referred to as "approach plates") despite being printed in booklet form on newsprint quality paper, and *Terminal Area Charts* (available for 29 high density traffic areas like New York, Chicago and Los Angeles).

Understanding the Jargon

Now that you know how to find the frequencies, what about understanding the lingo? A busy controller seems to talk faster than an auctioneer. Having some idea of what he or she is supposed to be talking about definitely helps.

Aircraft are identified by the name of the carrier and flight number for airliners. But bear in mind that of the 225,179 active civil aircraft registered with the FAA (as of 1989), fewer than 6,000 are airliners. All the rest are General Aviation. They identify themselves by make and/or model of plane and a series of numbers and letters that make up their registration number.

General Aviation is everybody besides airlines and military aircraft. The AOPA points out that General Aviation flies 120 million passengers per year to more than 14,000 airports. Airlines serve fewer than 300 locations, concentrating 75 percent of their flights at 48 major airports.

Photo: FAA

General aviation is everyone besides airlines and military aircraft, and they are to be found everywhere, even in downtown Chicago.

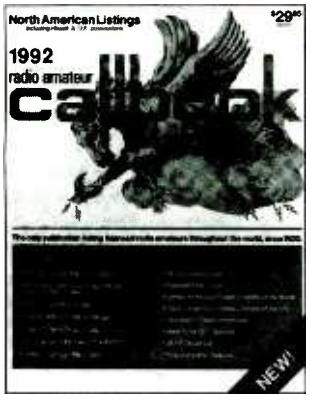
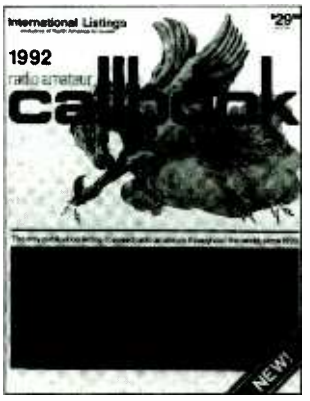
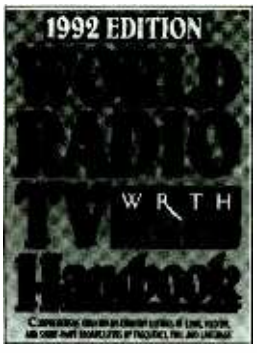
COVERING THE COMPLETE RADIO SPECTRUM...



1992 Radio Amateur Callbook: North American Edition
The North American Callbook lists the calls, names, and addresses for more than 500,000 licensed amateurs in all countries of North America from Panama through Canada, including Greenland, Bermuda, and the Caribbean islands, plus Hawaii and the U.S. possessions. 1,592 pages. 8 3/8 x 10 7/8. Item #087123. (paper) $29.95



1992 Radio Amateur Callbook: International Edition
The International Callbook lists more than 500,000 licensed amateurs in countries outside North America. Its coverage includes South America, Europe, Africa, Asia, and the Pacific area (exclusive of Hawaii and the U.S. possessions). 1,720 pages. 8 3/8 x 10 7/8. Item #087115. (paper) $29.95



World Radio TV Handbook, 1992 Edition
edited by Andrew G. Sennitt. "The authoritative reference book for anyone seeking information on radio and television around the world."—Radio Australia. Features country-by-country listings of long-, medium-, and shortwave stations by frequency, time, and language; a guide to worldwide broadcasts in English; plus much, much more. 608 pages. 5 3/4 x 9. Item #059235. (paper) $19.95

The Traveler's Guide to World Radio, 1992 Edition
edited by Andrew G. Sennitt. Especially designed for the business or recreational traveler, this book offers—in a handy size and graphic format—details of English radio broadcasts accessible in major international travel destinations. 128 pages. 7 1/2 x 3 3/4. Item #077675. (paper) $9.95

Available from your local electronics dealer or book store.

General Aviation is not just small planes either. It includes large cargo jets and helicopters; air ambulance, business and personal transportation, emergency rescue, law enforcement, news reporting, forestry and fire fighting, express mail and package delivery, crop dusting and pipeline patrol are all General Aviation.

By the way, air ambulance flights and even airliners with an ill passenger aboard all use the term "Lifeguard" as part of their ID on the air.

On the initial call to an ATC facility, the pilot should always use his full ID. For example, "Piper 1234 November" or "Cessna 567 Charlie Charlie" (CC is used for many Cessna Citation business jets). See Figure 3 for the IACO alphabet and number pronunciation.

In subsequent transmissions, the last two or three numbers and/or letters may be used to acknowledge transmissions instead of saying "Roger." This helps the controller and pilot be sure the right plane got the message.

Besides control towers, centers and approach/departure control facilities, the FAA operates nearly 200 Flight Service Stations (FSS) throughout the USA.

These FSS's are in business to provide pilots with weather briefings, assist lost aircraft, handle emergencies and more. They are usually are located at airports, but mostly pilots communicate with them by radio or over the telephone. When calling a Flight Service Station over the air, the pilot uses the location of the station and "radio" (i.e., "Miami Radio).

One FSS frequency worth monitoring is 122.0 MHz. This is the En Route Flight Advisory Service channel. Mostly you will hear pilots reporting bad weather conditions(unless you live close to the transmitter site — VHF is line of sight).

One thing you will hear a lot on the air is "squawk." This has nothing to do with complaints. "Squawks" are transmissions from airborne radar beacon transceivers that identify the "target" on a controllers' radar scope. If you hear a controller say "Squawk 1420" he is telling the pilot to enter that number into his transponder (that airborne radar beacon referred to above). This code identifies that plane on the radar/computer system.

"Squawk Ident" means the pilot is asked to press a button on his transponder that sends out a special signal causing his blip to flash on the radar scope— a quick means of identification for a busy controller. Most planes are equipped with transponders and most transponders are Mode C (meaning they automatically transmit the aircraft's altitude when placed in that mode).

Getting in on the Action

Folks who have a hand held or mobile scanner can have a real adventure visiting an airport and hearing both sides of each transmission. At some fields it is possible to park where you can see the runways. Larger airports usually have some sort of observation area in the terminal.

Check the *Airport/Facility Directory* or AOPA's *Aviation USA* to get all the frequencies (ATIS, Clearance Delivery, Ground Control, Tower and Approach/Departure Control) for that field. Start by listening to the ATIS which will give current weather and operational data. A new letter will identify the message each time it is updated by the tower. When the pilot makes his initial call (whether to Clearance Delivery or Approach Control if he is inbound to the field), one of the things he will say is "with Echo" or whatever letter represents the latest ATIS data.

Suppose Aunt Millie (whom you have kindly offered to drive to the airport) is departing on Delta Flight #123. You will be able to hear her flight's transmissions from initial call up (probably to Clearance Delivery or Ground Control) right through Tower and Departure Control. For inbound flights, you can monitor Approach Control through Tower and Ground Control right up to when the plane parks at the gate.

At small airports you monitor Unicom (the frequency is on the sectional chart). That way you hear the planes call in for the "active" (runway in use) and announce their position in the traffic pattern. It adds interest to watching take offs and landings.

For a very special occasion, treat yourself to a demo ride in a small plane. Arrange for a four seater if you plan to take a spouse, friend or children along. If you want to, the pilot may even let you "drive" for a while. I took my first flying lesson at 16 years of age. For me the experience of flight is enormously exhilarating. It's just not the same in an airliner. Every pilot's first solo flight is an experience he will never forget.

Warning: listening to (and flying) airplanes can be habit forming!

EEB NATION'S NUMBER ONE RADIO DEALER

Minutes From Washington D.C.

HAPPY HOLIDAYS from Electronic Equipment Bank

SONY ICFSW77 NEW

From the genius of Sony, the world's most advanced portable Receiver. Factory programmed, 100 of the most popular SWL stations which you can reprogram yourself.

- .15-30MHz AM/CW/SSB
- 76-108MHz FM (Stereo)
- Station Name Tuning
- 160 Memory Pre-set
- Synchronous Detection
- Wide-Narrow Filters
- Multi Function Scan
- Multi Function Clock/Alarm
- 120VAC Adapter Incl.
- 10.8x6.8x1.8 in. Wt. 52oz.

List $624.95 **EEB $499.00** + sh.

It's Time To Upgrade!

SONY ICF2010

Big Receiver performance in a portable, take with you package. Thousands of satisfied users make the ICF2010 Sony's Biggest Seller!

- .15-30MHz AM/CW/SSB
- 76-108MHz FM Band
- 116-136MHz Air Band
- Synchronous Detection
- 32 Program Memories
- Direct Keyboard Entry
- Multi Scan Functions
- Multi Clock Functions
- 4.5 VDC (3D) & (2) AA not incl.
- 120VAC Adapter Incl.
- 6.25x11.3x2.2 Wt 48 oz.

List $429.95 **EEB $349.95** + sh.

A True Classic!

SONY ICFSW7600

This is our number one selling mid-sized portable. Explorers and travelers will love the versatility of the ICF SW7600.

- .15-30MHz AM/CW/SSB
- 76-108MHz FM Band
- 10 Station Memory
- Full SW Coverage .1-30mHz
- Dual Conversion
- AN61 Antenna Incl.
- Clock, Timer, Alarm
- AM/SSB/FM/FM Stereo
- Direct Keyboard Entry
- Power (4) AA Not Incl. AC adptr. incl.
- 7 1/4 x 4 3/4 x 1 1/4 wt. 22 oz.

List $399.95 **EEB $219.95** + sh.

#1 Compact Portable!

SONY TCM38V

Turns your scanner into a logging receiver. Let the TCM38V run unattended. Play back later. You won't miss any action.

- Logging cassette recorder
- CH1 audio, ch 2, time date
- Records date, time & play back to LCD readout
- Ideal for scanner monitorin
- VOR voice/audio auto start
- Auto record level
- Built in microphone or Ext.
- Power (2) AA not incl.
- Opt. AC adapter PA3N 13 $9.95
- 3 1/2 x 5 1/4 x 1 1/4 wt. 10 oz.

List $129.95 **EEB $99.95** + sh.

NEW Innovative Recorder!

JRC NRD535D NEW

The NRD515 then 525 now 535D. Each generation has introduced state-of-the-art features to satisfy the most discerning listner.

- 1-30MHz AM/CW/SSB/FM
- New Exalted Carrier
- New Selectable Sidaband (ECSS)
- Phase Lock Detection
- Variable Bandwidth Control (BWC)
- Tuning Steps 1Hz DDS (10Hz readout)
- 100dB Dynamic Range
- 200 station memory
- RTTY Demod Option
- 4 Filter Position 3 Supplied .1,2,6kHz
- 13x5x11 in. Wt. 20lbs.

List $1999 **EEB $1599** + sh.

ICOM R71A

Setting World Standards! Versatile, Reliable, Rugged. Our Top Selling Desktop Receiver!

- .1-30MHz AM/CW/SSB Opt. FM
- Pass Band Tuning
- 100dB Dynamic Range
- Filters 6 & 2.4kHz Opt. CW 500Hz
- 120/240 VAC Opt. 12VDC
- 32 Programmable memories
- Dual VFO
- Multi Scan Functions
- IR. Remote Option
- Computer Control Option
- Many EEB Filters & other Options
- 11.3x4.3x10.9 in. Wt. 16.5 lbs.

List $999 **EEB $849.95** + sh.

DRAKE R8 NEW

Getting Rave Reviews From The Experts! EEB welcomes Drake back to the shortwave market. The R8 promises to be a big hit with the serious listeners.

- .1-30MHz AM/CW/SSB
- VHF Opt. 35-55/108-174MHz
- 100 Memory Channels
- Synchronous Detection
- 5 filters .5, 1.8, 2.3, 4, 6 kHz
- All Mode AM, CW, SSB, RTTY, FM
- Band Pass Tuning
- RS232 Serial Interface
- Dual Antenna Inputs
- 13.2x13x5.25 in. Wt. 13lbs.

EEB $979.00 + sh.

My First Shortwave

By Sal Emma

I found my first shortwave radio. Literally found it, in the bottom of my bedroom closet.

It was a Saturday in the summer of my 12th birthday. Kind of warm, hazy, and New Jersey muggy. The kind of day that makes even a 12 year old want to avoid work of any kind.

The grass was mowed. I was safe from that particular job. Saturdays in my house, however, were cleaning days. Vacuuming, dusting, scrubbing — a 12-year-old's living nightmare.

I think Mom made her vacuum cleaner selection based on which one was loudest. To this day she fondly remembers her old Kirby upright. When you plugged in the braided cloth-covered power cord you were ready to wake the dead with one touch of the toe. It was powered by a Pratt-Whitney rotary piston engine. At least that's what I thought it sounded like when I was 12.

Usually I was awakened on Saturdays by the ceaseless whine of the Kirby upright getting closer and closer to my room, louder and louder, until the iron sucking machine began banging the bottom of my bedroom door.

In my dreamy morning sleep, the Kirby upright was a Corsair F4U fighter, trying to take off with its brakes stuck. I finally roused with a start, rushed the door ready to verbally lash my sister for waking me up, flung it open with a bang, and it was Mom.

My tongue lashing was prematurely silenced. She hit the Kirby's switch with her right toe and we both waited patiently for the Pratt-Whitney to wind down to a cough and die.

"Well, good afternoon, young man," she said with a sarcastic edge in her voice. "Get dressed."

She turned and wheeled the squeaking machine back down the hallway. She stopped, poised her toe, and said, "Before you get involved in one of your projects you're going to clean that closet."

Not the closet. Anything but that. I'll mow the lawn again. I'll mow the neighbor's lawn. I'll weed the garden. I'll paint the porch — anything but the closet.

You see, as the youngest of four kids and one of the youngest cousins in the family, my closet was a dark tangle of ill-fitting, unstylish hand-me-downs, most of which were purchased in the late 1950s. I hated them. I hated the closet. I hated everything in it and about it. I hated the doors. Stinking, ugly, vinyl tri-fold things that never opened or closed right. Piles of old shoes, the wrong size, handed down to my closet where they slept a long sleep. None of it mine — well, really mine — but I had to clean it out. Why not get the brothers and uncles and cousins who unloaded the junk to clean it out? I inherited the mess. I'm not going to clean it up. I was starting to sound like a new president.

Man, what a waste of a Saturday.

www.americanradiohistory.com

The closet was my nemesis. the day looked as black as it could look to a 12 year old.

I brushed my teeth and dressed at the pace of giant tortoise. The slower the better. Maybe Mom would forget about the closet. Maybe, I thought as I ate my Cheerios one at a time, I could sabotage the Kirby. Sugar in the fuel tank maybe. Forget it. It would never work. I would get at least "grounded for a week" for killing the Kirby. I guess I'll be cleaning out the closet today. And tonight. And tomorrow. And Monday.

Man, what a waste of a Saturday.

As a result of her fondness for loud vacuums, Mom developed an amazing repertoire of facial expressions, all which my siblings and I could read instantly. I knew I had better get a move on.

I trudged to the room. The tri-fold doors glared and laughed at me. "C'mom, make my day," the closet jeered. I opened the doors with a grunt and planned my attack. Hangers first. Then floor.

I started looking for the junk I had inherited but never wore, and never would. Flood pants, western shirts, polyester ties, leisure suits — all went in a pile in the middle of the floor.

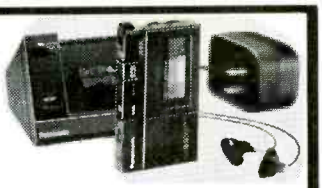
I knew this activity was pointless. Later, when Mom came in to check my progress, she would put it all back, reminding me how my generous relatives had parted with these priceless items just for me. I was left with the things I really wore. Two pairs of bluejeans and six flannel shirts. I knew I was in for it.

The floor next. First pull out the single mateless shoes. Then the leaky rubber boots Uncle Sam handed down. The cowboy boots that never fit, the wayward shoes without heels or soles, laceless vagabonds — all out to the pile.

As I sifted through old moldy sneakers and hairballs, I saw something I could not identify in the dim closet light. A box, about the size of a kid's lunch box, maybe two stacked lunch boxes. I grabbed it and lifted it out of the dark closet. It was heavier than it should have been. Real substantial. It had a rough, textured feel. I got it into the light. It was grey-green with a dusty leather covering, like the cover of an old book. And had weird knobs and dials and what looked like skinny light bulbs inside. Soon it dawned on me that I was looking at a radio. But a radio like none I had ever seen.

It had two big dials, for starters. One labeled "tuning," the other "bandspread." I

World's Smallest Recorder



This is an Amazing little recorder. Small enough to fit in a pack of cigrettes, packed full of features. Comes with recorder, docking port w/speaker, earphones, padded case, AC adapter and more. This very high quality recorder is use by the hundreds in federal agencies. Built by Panasonic to the highest standards.

Only $299.95

We'll let you in on a little secret...

MONITORING TIMES is the fastest-growing radio communications magazine around! Put MT in your stocking today and open up a new world of listening!

www.americanradiohistory.com

It was sloppy, noisy and inaccurate. And I loved it. It was the greatest radio ever built.

had never heard of bandspread. Between the big dials was stenciled in white letters: "Explor-Air." Four knobs marked "antenna." And what's "RF gain?" This was the weirdest, coolest thing I had ever found in my possession. But where did it come from? It was sitting in the bottom of my closet behind old shoes. For how long?

My closet nemesis was quickly forgotten. "Mom, Mom, where did this come from?" I yelled, clutching the Explor-Air and running toward the roar of the Kirby. She saw my mouth moving and assumed I had some important business. She toed the Kirby and waited for the monster to grind to a halt.

"What?" asked Mom.

"This radio thing. Where did it come from?" I replied, displaying the Explor-Air.

"From your room, by the looks of it."

"Yeah, but . . . ."

"Is it yours?"

"I guess. I dunno."

"It was in your room, right?"

"Yeah."

"Well, then it must be yours. You better get that closet done. I'm coming in there to check on you." She was finished with this little exchange and gave the Kirby her toe to restart its gargantuan engine.

I returned to the closet before the Kirby had reached top speed. I sped through the rest of the job, dying to plug in the box to see what it would do. What a find! I finished my chore trying to imagine where the box came from. I must have gotten it with a load of old clothes and shoes from one of my cousins. I picked up the clothes from the pile and hung them up, silently thanking each cousin for his thoughtful donations. I straightened out the shoes and filled a brown bag with stuff for Goodwill. I was finished. In record time. Now, plug in the Explor-Air.

Man, what a Saturday.

I plugged it in, half expecting a shower of sparks and flames. Okay. It's in, safely. Now, switch it on.

Click. I heard noises coming from inside the box. Not radio noises but physical noises. Tiny clicks, like metal heating. Then the smell. The unforgettable smell of old dusty vacuum tubes warming up for the first time in 10 years.

At the time I was not so sentimental about that smell. In fact, I considered yanking the plug to prevent the thing from burning up. Then the smell sort of subsided, or maybe my nose just got used to it.

Then, nothing.

I turned up all the knobs. Of course I couldn't turn up the "antenna" knob since it just spun and spun without beginning or end.

Then I turned the big dials. Nothing. I clicked the band switch. Nothing but a lot of dirty-contact noise. Damn. All that excitement for nothing. I hadn't given up, however, and continued to tweak. Suddenly, some music. I didn't know where I had tuned the thing since I had no way of knowing how to read the dial. Then an announcer. A familiar voice. It was Phil Allen on WBUD, 1260 AM. Wait a minute. WBUD was about half a mile from my bedroom. Again disappointment. The thing wouldn't hear any more than my crystal radio.

The Explor-Air nagged me as I thought about it. It did not seem right. If it heard WBUD, then it should at least hear WFIL, WIP and other Philadelphia stations. Maybe even WOR and WABC in New York. I tweaked. No soap. I tweaked again. As I twisted the "antenna" knob, I was struck by lightning inspiration for a 12 year old.

My crystal radio experience told me I could not even hear WBUD without an antenna. I turned the Explor-Air around and peered at the back. Hey, those light bulb things are lit up. Just faintly, kind of red. Cool. Very cool.

I scanned the back panel and saw a black plastic protrusion. Next to it, stamped in the tinplate, ANTENNA.

I scoured my room for — what? What kind of antenna did the Explor-Air want? I had to make a decision. Not difficult considering that I had little more than scraps of wire in my room. "A scrap of wire," I proclaimed to the little green box. "You shall receive a scrap of wire." After all, a scrap of wire always worked for the crystal set.

I stripped the end of the first scrap of wire I scrounged, with my teeth of course, and stuck it in the hole surrounded by black plastic, forgetting I had tweaked the volume to full.

The Explor-Air screamed and so did I. I wasn't sure what to do at first, so I pulled the wire out of its hole. Silence. I turned down the volume and stuck the wire back in.

I turned up the volume and heard, for the first time in my life, that whistling, hissing, rushing sound that fills the space between stations on shortwave bands.

I tweaked and clicked. Suddenly from the noise came a voice. In some foreign language. WOW! Very, very cool. I tweaked some more, and heard more voices. Many languages. Then, one in English. A man. He sounded as though he was a million miles away. Inside a big coffee can. I listened. He was talking about I don't know what. Goods. Economy. Stuff I didn't understand. Then: "You are tuned to the North American Service of Radio Moscow."

What? Moscow, like Russia? USSR? CCCP? The Reds? I was aghast. Amazed. Astonished. A very excited 12 year old.

The Explor-Air was a miracle of modern science. Russia. Right in my bedroom in Trenton, N.J.

I would spend hours to come with that little green box. It was an abysmal radio, but I thought it was the cat's meow. Later, when I learned the difference between a megacycle and a kilocycle, I realized you couldn't really tune the Explor-Air since the tuning knobs had no stops. The dial was marked in 180 degrees and the dials rotated 360. I could pull the knobs off and replace them in a different position. I listened to WWV and CHU all the time, but didn't know I could use them to calibrate the rig.

It was sloppy, noisy and inaccurate. It tuned WBUD everywhere on all bands. And I loved it. It was the greatest radio ever built.

I was hooked.

My love of radio is ceaseless. I'm a writer now, but I can attribute at least part of my career to the Explore-Air, since I started my career writing — in radio. I studied radio in college and started out as a news director in a small market station, writing my news and reading it on the air. It was a gas.

Of course, I'm still hooked. I collect vacuum tube receivers the way some people collect stamps, much to wife's bewildered amusement.

And most of them run on a scrap of wire.

Some things never change.

Starting A Local Radio Monitoring Club

(Some tips to help you along)

By Wayne Heinen

Many readers have written letters to *MT* with a request to publish their name and address so that other radio hobbyists in their area can contact them. Radio monitoring, be it shortwave, scanning or broadcast band, just seems to be more fun when it's shared with others. *MT* is a great vehicle, but wouldn't it be great to have friends locally to share the hobby with? Here's what some of us tried in the Denver area. For us, it works.

Ron Downing, Rodney Johnson, Rob Harrington and myself actually started the club. Over the years Rob had gleaned names and addresses of area hobbyists from many DX club bulletins and publications. Occasionally, a gathering was held at someone's home. Out of these gatherings Rocky Mountain Radio Listeners was formed in late 1985.

No one in the group wanted to see a dues-oriented club. Dues would mean bookkeeping, a bank account and headaches for at least one of us. What we needed was a sponsor. We found a local radio dealer who showed enthusiasm and interest in our idea. We would prepare a newsletter and he would pay for the printing and postage. The newsletter contained information on the club and our sponsor's advertising.

We found two cooperative libraries, one on each side of metropolitan Denver. Many libraries have meeting rooms and will make them available to hobby groups for free or for a nominal fee. At the time, both libraries offered the rooms free of charge. We scheduled our first meeting and mailed our first newsletter. Fifteen people attended.

We began scheduling monthly meetings on the third Saturday in the west and the third Sunday in the east. The monthly newsletters were sponsored for three months when our first pitfall was encountered. The dealer who had been very optimistic lost interest in the venture. Evidently he expected to sell lots of radios to this new-found clientele and when the sales didn't meet his expectations, he withdrew his financial support.

Tip Number One: *Be realistic in your expectations.*

A monthly newsletter is going to be too expensive for any sponsor of a local club. A calendar of the meetings for the remainder of 1986 was mailed out. The printing and postage was around $35. It was paid for by a few of us who wanted to keep our club going.

The following year we approached another local radio-oriented business. With our new-found knowledge, we made a deal with Electronic Bits `n' Pieces. This store, located at 1462 Ida St., Aurora, CO 80010, specializes in used equipment, new and used electronic parts and various periodicals. Owner Bub Barber pays for the printing and mailing of our calendar, which also contains advertising for the store. Bud has been our sponsor since 1987.

In our effort to find other radio hobbyists, we sent copies of our calendar to ANARC member clubs, shortwave broadcasters with DX programs and *Monitoring Times*. The cooperation we received from them was excellent. We've received many inquiries that began, "I heard about your club on Glenn Hauser's `World of Radio.'" or "I read about Rocky Mountain Radio Listeners in *Monitoring Times*."

The best way to reach other radio hobbyists is through the groups and businesses that serve them. Our calendar is also posted at Bits `n' Pieces and in a few other radio oriented businesses.

Tip Number Two: *Advertise where hobbyists will find it.*

Getting together with other monitors can add a whole new dimension to your hobby. Present at this meeting of the Rocky Mountain Radio Listeners were from left to right—Standing: Curt Mann, Simon Byrd, Wayne Heinen, Jim Nelson, John Pirnat. Seated: Andy Kovschak, Frank Mezak, Rob Harrington, Les Dickenson. Paul Origlio took the photo.

www.americanradiohistory.com

Jim Nelson

Our display in the Aurora Central Library was one way of reaching out to the public by making ourselves visible.

Our meetings are open affairs and the interests of those who attend varies from DC to Daylight. We have at least one person representing each area of monitoring that you normally find in an issue of *Monitoring Times*. The meetings are gab sessions where everyone shares the latest news of their particular area of the hobby.

It was at these open free-form meetings that we encountered our second pitfall. We had a gentleman who enjoyed hearing himself talk, regardless of the interest of the others or the accuracy of his information. After only a few months, we noticed newcomers never returned and some of our long-time members stopped attending.

Tip Number Three: *No one can dominate.*

Although we felt sorry for him, we eventually dropped his name from our mailing list and he stopped coming. Our attendance returned to its previous level and meetings were fun again.

Our west side Saturday meetings were discontinued in 1988. Saturday afternoons didn't fit most members' schedules and there wasn't an available Sunday meeting room on that side of town. We ended up with monthly Sunday meetings in Aurora.

Tip Number Four: *Beflexible. If something doesn't work find an alternative that will.*

This was a compromise that cost us a few regular members, but was necessary to keep the club intact and eliminate meetings that few attended. We found, if only a few people showed up for a meeting., it was hard to generate any excitement or increase the attendance.

The Aurora Central Library meeting room was free until this year. Due to Aurora City budget constraints, we were asked to either pay rent or make some kind of donation to the library. After negotiations with the library's meeting services coordinator, who was very helpful, the club agreed to donate $1 per member per meeting. This arrangement allows us to avoid dues and the attendant headaches while continuing to use the facility.

Tip number five: *Negotiate with your facility.*

Some members made jokes, some wanted to go elsewhere, and some may have been legitimately upset about the fact that money would have to change hands. But in the end, we were able to keep meeting without an extensive search for a new location.

Keeping your local club going after its initial meetings does require some volunteer effort. The mailing list must be entered and maintained on computer. Someone has to negotiate with the library for the use of the facilities; and the yearly calendar must be prepared for printing.

One of the newer members thought that it would be nice if we could go see Denver's FAA Air Traffic Control Center and he arranged for a tour. As new members became comfortable with the club, they began to volunteer ideas and time to help make the organization better. We're now planning a tour of the new City of Aurora Police and Fire dispatch. These kinds of activities create an atmosphere that encourages more people to volunteer to do more things, and the fun multiplies.

Tip Number Six: *Keep it interesting.*

Recently, several of us volunteered to fill the library's display case with a display on radio monitoring. We wrote articles on our favorite areas of the hobby and gathered items to display. One member let us use some of his standby equipment, Al's Electronics of Brighton lent us a DX-440, and Electronic Bits 'n' Pieces gave us books and copies of *Monitoring Times*. The library appreciated the display and we hope their patrons enjoyed the glimpse into our hobby.

Tip Number Seven: *Involve your members and reach out to the public.*

The support of various organizations is important in maintaining your no-dues club.

FCC NO-CODE
AMATEUR RADIO LICENSE

The FCC recently passed Docket 90-55 which for the first time allows a new codeless entry ham radio license of technician grade. Privileges 30 MHz and above - ALL modes! (Send SASE for copy of R.E. article)

Tip Number Eight: *Remember to say thanks.*

This can be by letter, certificate of appreciation or in person. Rocky Mountain Radio Listeners thanks those at Monitoring Times and Glenn Hauser's "World of Radio," the ANARC member clubs, our calendar sponsor Electronic Bits 'n' Pieces and our meeting facility, the City of Aurora Central Library. Without their support we would no longer exist. When you start your club keep in mind the national and local support that is out there and remember to publicly thank them at every opportunity.

Rocky Mountain Radio Listeners has been meeting regularly since 1985. I have made new friends and have been exposed to many other aspects of radio monitoring that I may otherwise never have explored. When we started the club, I was almost exclusively a broadcast band DXer. Now, I listen regularly to world-band broadcasts and have a scanner to monitor my local public safety bands.

Tip Number Nine: *Have fun with your club.*

Hopefully, our experience with Rocky Mountain Radio Listeners will give you some ideas on how you can form your own local radio monitoring club.

mt

Editor's Note:

Over the years compliments from *MT* readers have invariably ended with the words, "the only way *MT* could get any better is by coming out twice a month!"

That's not going to happen, but you have the equivalent of an issue of *MT* right within your own neighborhood. At a monthly meeting of fellow enthusiasts, there is a wealth of information on local frequencies, reception conditions from your locale, experienced advice on equipment—all specifically geared to your region. Especially if you're a beginner, comparing notes with others can be invaluable, and there's nothing like talking to someone face-to-face. Why else do you think we started the *MT* Convention?!

To find a local group, turn to our new "Club Circuit" on page 108. If there's no club listed for your area, why not start one?

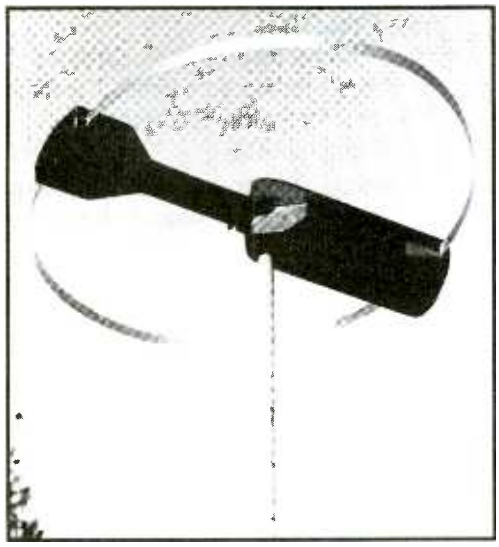
AEA is the...

Shortwave Solution



The IsoLoop 10-30 HF antenna is designed to work in limited space applications — apartments, condos, etc. Don't be deceived by its compact size (43" diameter) — it really works! Features include: Continuous coverage from 10 to 30 MHz; narrow bandwidth to suppress out-of-band signals; comes fully assembled (no mechanical joints); much more.

For complete information on these or any other AEA products, call the toll-free InfoLine at (800)432-8873.

The PK-232MBX is a must for the digital Shortwave Listener. By far the most popular multi-mode controller ever, it can receive seven different types of data signals including Morse code, Baudot, ASCII, TDM (Time Division Multiplex), WEFAX, NAVTEX and Packet. It also features: The indispensible SIAM which automatically identifies many types of digital signals; superior software support for PC compatible, Macintosh and Commodore 64 and 128 computers.

AEA-FAX is simply the best way to demodulate multi-level grey scale fax images received by your general coverage receiver. All necessary hardware and software is included in the package which also features: On-screen tuning "scope"; Autolist feature for unattended image capture and save-to-disk; "Daisy-chain" external RS-232 input allows AEA-FAX to share a COM port with a PK-232MBX or other Hayes-compatible device; up to 16 grey levels (VGA); also supports EGA, CGA and Hercules formats; prints to HP LaserJet or Epson compatible printers.

1991 Monitoring Times Index

January

Features:
New Year's Resolutions
Wings: Civil Air Patrol
Monitoring Cuba: To and Fro
Changing Partners (maritime frequencies)
Korean Time Station HLA

Departments:
Utility World: Maritime monitoring
Scanning: Scanning skills test; MT in prison?
What's New?:Review: LF Eng L-3201 preamplifier
Beginners: Mailing Overseas
Fed File: Nellis AFB and Nevada/Utah desert area
High Seas: Canadian Ice Advisory Service
Ham Bands: Handicapped code; ham nets
Outer Limits: Death of Comandante David
Below 500 kHz: Lost and found beacons
RTTY: Cleaning out the shack; RTTY in Arabic
Satellite TV: DBS scramble scanning SCPC
Bandscan: CFOB, Rainy Lake, Ontario
Below 500: Lost and found beacons
Magne tests: Realistic DX-350
Scanner Equip: PRO2006 mods — Lescom
Demaw: Direct-Conversion Receivers
Workshop: Improving receiver audio
Antenna Topics: Beverage beam
Ask Bob Tip: Kenwood TS711 frequency expansion

February

Features:
Tahiti: Myth and Reality
Drug War Monitoring: Part 1
China's Shortwave Voices
No-Code Hamming
Fire at Stapleton Int'l Airport

Departments:
Utlity World: Cosmos sats; 89th Air Wing
Scanning: New York transit systems
Beginner's: Guide to soldering
Fed File: USAF Cloudcroft Oberservatory
Plane Talk: Aero terms A to D
Ham Bands: Handicapped waivers; hams in space
Outer Limits: Baghdad Benny and the VOA
Below 500 kHz: Loggings from Medina, OH
RTTY: USIA and VOA RTTY
Satellite TV: Weather satellites
Bandscan: WSBS, Great Barrington, Massachusetts
Below 500 kHz: Fish net beacons; GWEN delay
Magne: Haverhills Rodelvox portable
Scanner Equip: Uniden BC855XLT (inc cell mod inst)
Demaw: Innovate and cut the cost of parts
Workshop: Cooling off your receiver
Antennas: Multiband SW antenna; paperclip antenna
Ask Bob Tip: Full freq coverage on Magnavox 2999

March

Features:
War in the Middle East
Drug War Monitoring: Part 2
Cellular Phone Hopping
Man: The Human Receiver
Radio Japan's Rika Kobayashi

Departments:
Utility World: FAX, weather FAX frequencies
Scanning: The aborted NBC interview; COMNET
What's New Review: Ace spectrum analyzer/logger for AR3000
Beginners: Guide to batteries
Fed File: Desert Storm frequencies
High Seas: Private 2 MHz freqs; VHF Ch. 13
Bandscan: KAYN, Nogales, Arizona
Satellite TV: Changes coming up in 1991
RTTY: Computer-decoded DSP
Magne: Grunding Cosmopolit
Scanner Equip: Pros and cons of preamps
Demaw: Broadband amplifier
Workshop: Ten-Tec Argonaut modifications
Antennas: Easy antennas

April

Features:
Crackdown by the FCC
49 Meters at 0100
The Legendary CKLW
Tuning in the Trains

Shortwave Broadcasting

Glenn Hauser
Box 1684 - MT
Enid, OK 73702

ALBANIA National domestic service, ex-5057, now regular on new 6100, off a few Hz with a slight het. ITU lists at 0600-1700, and I often hear final hour. Programming much zippier and more westernised than the last time I heard it on SW! (Dave Kernick, England)

AZERBAIJAN Baku still has transmitter problems, wandered away from 4785 and settled on 4673, strong signal but poor modulation with domestic first program (ibid.)

BOTSWANA Radio Botswana heard 1800-2000 on both 4830 and 3355 (not 3356) in parallel (Vashek Korinek, RSA, via Dario Monferini)

First two of four new VOA shortwave transmitters may go into use after December 7, tentative schedule: English 0300-0500 on 7265, 0300-0430 on 11940, 1600-2200 on 15445; other languages: 0430-0500 on 15370, 1630-2300 on 17705. Special QSL will be available only from Washington. Tests on other frequencies may be carried out before this schedule becomes regular. (Dan Ferguson, VOA)

BHUTAN BBS, 5025.0, so good I cannot call it DX any longer, English at 1415 with news, 1420 clear ID, 1430 various music, 1450 fading, 1500 sign-off (Ron Howard, CA, *Fine Tuning*)

BRAZIL New station in Aquidauana, Mato Grosso, is A Voz do Pantanal, 4795.0, heard at 0916-0930, ID again at 0958 (Julian Anderson, Argentina)

CANADA Morale at RCI is at rock-bottom. Aldo Marchini is doing traffic reports on CBC Montreal (Larry Shewchuk, Manitoba, World of Radio) Wojtek Gwiazda is filling out paperwork for freelancers, answering phones (Jackie Poulet, RCI, RFPI Costa Rica) Lobbying efforts continue, however, with some encouraging signs (Gwiazda via Rachel Baughn)

AM source of 6005 in Montreal has new calls and format, CIQC, country (Daryl Rocker, Howard Box, Richard Urenya, Stanley Kolodricki, *W.O.R.*) SW call of CFCX was tied to the former AM call, CFCF, so is there a new official SW ID on the books, or on the hour?

CHINA (non) Voice of China, 15280 via CBS Taiwan at 2100-2200, announces new address, copied through jamming: P.O. Box 11696, Berkeley CA, 94701 (Toru Yamashita, Radio Japan)

COLOMBIA Radio Catolica, 3579.94v, heard 2330-0515 sign-off with two versions of national anthem, one choral, one instrumental; but has Ecuadorian music programs, ads for Ibarra, and *curanderos* (witch doctors); very picturesque and rustic unofficial station; announces 3500. Other pirates at times relaying different legal stations or networks are on 3500, 5530, 5873.54, the latter with relays from Narinyo. La Voz de la Selva, inactive on 6170, heard on 3270.77, third harmonic of mediumwave (Juan Carlos Codina©, Peru, via Dario Monferini)

CUBA (non) La Voz de la Federacion de Ex-Presos Politicos Cubanos, heard again after two months, on 7082.77, UTC Saturday at 0043-0054 (Juan Carlos Codina©, Peru, via Dario Monferini, *W.O.R.*) In mid-October, Radio Miami Internacional resumed heavy schedule of Cuban exile programs via WRNO, now in the 0100-0400 period on 7355; lots of clients including Brigade 2506 and Alpha 66 anticipate the coming collapse of Castro's Cuba.

Gale Reed, head of RHC's English service, says 70% of staff are Americans, 10% Canadians, rest Cuban (Marty Delfin, TX) Reed was profiled on ABC during PanAm Games coverage—came to Cuba in the *Venceremos Brigade*. Remains American, visits parents in Chicago without problems.

RHC's SSB broadcasts a total failure—strong signal but unable to clear up in SSB or AM (Dick Trost, CA) Agreed, 5965 at 0030-0600 often modulated only on audio peaks, extremely annoying; long periods of dead air, presumably during soft music. But now 5965 has replaced 15140 as early as 2300 and may be used in regular a.m.

ECUADOR Radio Juventud-Uno, or Radio-Jota-Uno, La Voz de la Juventud, with same echo-effect jingles as 9 years ago, heard at 2222 on 6501.24 varying to 6501.79 (Juan Carlos Codina, (C), Peru, via Dario Monferini) See also COLOMBIA.

Radio Central, Riobamba, heard on harmonics 2340, 3510, 4680 around 1125; many IDs. Espejo still off 4680. Radio Popular, Cuenca, nominal 4800, a mess on 4774 with bits of modulation, excellent strength at 1159. Radio Centinela del Sur has been staying on 4899, not hopping to 4890, when checked at 1100 (Rich McVicar, HCJB *DX Partyline*)

HCJB has started a regular weekly call-in program, UTC Tuesdays 0130 on 9745, 15155, 21455, *Open Line* with Ken MacHarg; will have different topics and guests. Calls from the US average less than $1 a minute; 011-593-2-241-560 (HCJB)

HCJB will be on the 20, 15 and 10 m ham bands starting Dec. 6 at 2100 for 30 hours to celebrate 60th anniversary, using callsign HC60JB, on 14225, 21300, 28500, with their own antennas and transmitters at reduced power, presumably on USB (ANARC SWL net via Daryl Rocker)

HCJB will be moving their worldwide headquarters from Opa Locka, Florida, to Colorado Springs in June 1992 (Rob Harrington, NONNI, Denver, *SW Echo* via Kirk Baxter)

ESTONIA Radio Estonia, Tallinn, has English Mondays at 2130-2200 on 5925, with new DX program the first week of the month. Also has used 9560 for this service, and plans to add English on Thursdays in 1992 (BBC Monitoring)

GUAM AWR-Asia is adding more Soviet languages. All AWR stations are issuing a 20th anniversary commemorative QSL. DX Asiawaves is heard Saturdays at 1615 on 11980, 2315 on 15610, UTC Sundays 0215 on 13720 (Bill Matthews, Radio Korea) Program is produced by Australian Radio DX Club, additionally on Sundays at 1815 on 13720; and Saturday time is 2330. ARDXC offers its own QSL for this (Bob Padula, *Australian DX News*)

GUIANA FRENCH Swiss PTT is to buid a 500-kW transmitter at RFI's Montsinery site, to be on air by late 1994, when it will replace relays via Brazil and Gabon for SRI (Mick Ogrizek, Holland, *ADXN*)

HONDURAS Radio Miami International's station in Tegucigalpa has been assigned calls HRJA, and allocated 9950 and new 15670 with 1 kW (Marcel Rommerts, DSWCI *SW News*)

HUNGARY Radio Budapest shows 0200-0300 but it really shifted to 0300-0400, on 11910, 9835, and 6110 (or 6100? both are blocked). Concluding each Monday hour, repeated Thursday and Saturday are music features: Dec. 2, *Music and Mozart "Authentick"*; Dec. 9, *Music and the Animators*; Dec. 16, *Music and Eating Out*; Dec. 23,

www.americanradiohistory.com

Shortwave Broadcasting

Music and the Seasons; Dec. 30, *Music and the Year End* (via John S. Carson, OK)

INDONESIA Mystery intermittent Christian station on 4881 around 0900-1200 is solved! It is Radio Suara Kasih Agung (Voice of the High Friend), in Jayapura, Irian Jaya, which I heard in the early 1970s on 2400 kHz as Suara Kasih (Geoff Cosier, Australia, DSWCI *SW News*)

INTERNATIONAL WATERS Radio Caroline has obtained a licence from a Third World country not in the ITU to operate an international service from the *Ross Revenge*. Bob Geldorf would invest in the project to promote famine relief. Station would then be legal enabling offices and supplies in Britain (Radio Caroline via WDXC *Contact*)

IRAN VIRI began English to North America Oct. 15, 0030-0130 on 15260, 9765, 9022 (BBCM) One evening played nothing but interval signal on 9022 (Joe Hanlon, OR) Another seemed to be open carrier, and when modulated unreadable on 9022, blocked on 9765, and of course BBC is on 15260! (gh, OK) Fair with commentary on Palestinians, Koran (Harold Frodge, MI)

(non) Voice of the Mojahed from 0125 music, 0130 sign-on, 4750, 6160, 7150, not even jamming on 4240, 3560; and 8500 dropped. Again from 1530 on 7150, 6150, 5635, 4750, no 8500 or other previous channels, until 1830; down from maximum of 11 transmitters. Keeps shifting + 10 kHz to avoid jamming (Asanta Sirimanne, Sri Lanka, *Union of Asian DXers*)

ISRAEL From Nov. 3, Israel Radio resumed English news at 0500 but only on 11588; also at 1100-1130 only on 17545; the 1800 and 2000 broadcasts to Africa on 17575, at the expense of Asia and Pacific, no longer targeted; "damage repair" (IBA and via Joe Hanlon, PA)

LATVIA Latvian Radio, Riga, English is Saturday 1830-1900, repeated Sunday 0700-0730; also has weekday English/German at 2130-2140, all on 5935 (BBCM)

LITHUANIA Radio Vilnius, 0000-0030 on 17690, 17605, 15180, 9710, 7400 (BBCM)

MOZAMBIQUE (non?) Last active 7-1/2 years ago as Voice of Free Africa on 62 meters, clandestine Voice of RENAMO is now heard on 9990 at 1500-1600 and 0500-0530 in Portuguese and Chissena (BBCM via RNMN)

NEW ZEALAND Contrary to expectations of listeners and some programmers, RNZI did not shift its external programs one hour earlier by UTC for local summer time, so *Mailbox* stayed alternate Mondays 0430; *Calling Pitcairn/Norfolk, Tokelau, Around the World* with Rudi Hill rotating 4-weekly Fridays at 0430 on 17770. Tony King kept promoting his February two-week guided tour of NZ including radio facilities, but never gave the price on the air; brochure reveals it's US$3157 including airfare from Los Angeles, plus a $540 penalty for those travelling single (*W.O.R.*)

OMAN Caution with Arabics on 17725; Libya signs on around 1115, but before then Oman is heard on both 17725 and 17735 (Dave Kernick, Caversham, England, *W.O.R.*)

PERU 3800.28, Radio Oyon, usually heard mornings 1100-1200, once in two months at 2338-2359.

4140.93, Radio Gran Pajaten normally here in evenings; for two days was on 4555 instead.

4438.00, varying + 30 Hz, Radio Lider, town unknown in Cuzco area, could be harmonic, 2200-0200.

4553.30 varying to 4553.60, Radio Uno, Huanuco at 2330-2350; next day 1130-1200 around 4545; formerly on 4370.

5269.55, Radio Ruder, new station at 2344-0400, in province of San Ignacio de Cajamarca, town sounds like Chinchas, mentions it's on Ecuadorian border. A few days later on 5269.68 from 0000 past 0030, conflicting with next station...

5271.77, Radio Nororiental, Rodriguez de Mendoza, big carrier but weak modulation, opening at 2355, echo-effect ID claims "6570," went off at 0026, perhaps letting Ruder know the frequency is occupied.

5361.15, Radio Jauja, 4th harmonic around 1200.

5619.29, Radio Ilucan, Cutervo, very rarely active, heard with mass on a Sunday at 1200, but not the following week.

6599.38, Raido Futura, 0030-0200 on a UTC Friday and said would be back next week. (Juan Carlos Codina©, Lima, Peru, via Dario Monferini, *W.O.R.*)

POLAND Last active 7-1/2 years ago, Pathfinders station is back on 7205 until 1700 (BBCM via RNMN)

QATAR Doha on 21555.6 at 0707-1707, 11910.7 at 1707-2130 (Wolfgang Bueschel, Germany, DSWCI *SW News*) Always notable by the heterodyne (Noel Green, *DSWCI* Ed.)

RUSSIA Radiostudiya Dvizheniye (Traffic Radio Studio) is a new station in Yekaterinburg (formerly Sverdlovsk), from morning until 1300 on 9695 (RMWS via BBCM) Was 0530-0700 on 9695, but to have been replaced by 9670, 7200 or 6090 (Fyodor Brazhnikov, Irkutsk, via Jorma Mantyla, Finland, SW Echo via Kirk Baxter)

Radio DVR (Far East Russia) not heard since Oct. 8 on 4060, 5965, 9560, but doubt it is closed, as planned to install 100 kW transmitter (S. Aoki and Y. Kato, Radio Japan)

Radio Moscow in French at 1700 on 29680, not an image; my only guess is the 4th harmonic of 7420 (Mike Schulsinger, OH)

Radio Vedo, 13710, 1810-1901 in Russian, English and French (Hans Johnson, MD)

Radio Tikhly Okean, 7490 apparently reactivated, tentatively at Birobidzhan, heard several nights around 0800-1100 with drama, comedy, light music (Harold Frodge, HI)

Raido Alla, new private station sprang up in St. Petersburg, with traditional folk music, 0730-1600 on 7400, 1630-0700 on 5040, 0700-1200 on 11925, 1200-1500 on 11920, 1530-0700 on 6055 (BBCM) Heard much better than Tbilisi on 5040, 0045 (Dave Kernick, Caversham) The 7400 transmitter is in St. Pete, the rest in Kaliningrad (Radio Sweden *Mediascan*) Named for folksinger Alla Pugachova. Studios are in Moscow at the Gosteleradio address, Pyatnitskaya 25. Except for 7400, transmitters are at Kalilin, near Moscow (Andrei Nekrasov via Dario Monferini) Not to be confused with the Russian enclave west of Lithuania, Kaliningrad, which some consider a separate radio country.

Shortwave Broadcasting

New Deutsche Welle relays via Russia monitored: English 0200-0250 on 17620, 1600-1650 on 9875. Pashto 0300-0350 on 17620, Dari 0800-0850 on same. Urdu 1430-1515 and Hindi 1515-1600 on 9875. German 1000-1400 on 11730, 2200-2400 on 9885. Japanese 1100-1150 on 15560. The last one is a regular Radio Moscow frequency via Irkutsk. Chinese 1200-1320 on 15525 from Novosibirsk, surrounded by Radio Moscow Korean service (S. Aoki and T. Yamashita, Radio Japan) Also heard in German at 1400-1800 on 11655 (Don Rhodes, *ADXN*)

RWANDA RRR plans to get a 100 kW Swiss SW transmitter to cover Africa/Mideast with two channels (Reuter via *DX Partyline*)

SARAWAK Raido Kuching, Malaysia, not found in *MT* logs, but on 4950 at 1330 in native language, 1400-1430 local and world news in English, heard several times since July (Dennis Harrington, CA)

SOUTH AFRICA Radio RSA has an interesting program, *The Editors*, roundtable discussion with journalists from local and foreign media, Sundays at 1630 on 15270; one was about right wing hit squads (Larry Shewchuk, Manitoba, *W.O.R.*)

SWEDEN Nomenclature news: Radio Sweden's magazine program is now called *60 Degrees North*. The moose mascot is Gustafsson. *Sweden Calling DXers* has become *MediaScan*. The new one-hour English program at 1930 on 15270, 9655, 6065, seems to be the first show of the program day, which means that *MediaScan* repeats run into UTC Wednesday at 1345 on 17740, 21570, and 1545 on 17870 and 21500, where *SCDX* formerly appeared on first and third Tuesdays. Plans were for additional *MediaScans* to appear only during the second half of the 1930 broadcast on other Tuesdays, but it also shows sometimes on the half-hour repeats.

TAIWAN (non?) Voice of Taiwan, clandestine, heard on 9990 Oct. 23 at 1305 in Japanese, 1322-1333 in English, music until 1353; 1400 in Chinese dialect--Amoy?, 1434 Chinese, 1500 Japanese, 1525-1600 English repeating previous day's transmission. Strongly opposes ruling KMT (or GMD) party and some policies of the Democratic Progressive Party. Seems to be run by Taiwan local people, who have had huge fund-raising campaign for two years; already had TV station Voice of Democracy; anticipated arrest at any time. Announced address, and fax (886) 2-522-2080 (S. Aoki, T. Kondo, T. Yamashita, Asian Broadcasting Institute, R. Japan)

UGANDA Letter from Yona Hamala says Radio Uganda will soon resume U.S. service on 15250 with 250 kW, 20 db gain antenna (Sheryl Paszkiewicz, WI, *Fine Tuning*) Years ago it was at 0300 on 15325 in English.

UKRAINE Radio Lugansk, 7240 at 0510-0600 with local programs; at other times relays Moscow foreign service or Ukraine national services (Soviet correspondent via *DXPL* via *DX Ontario*)

Radio Nezalezhnist (Independence) has been broadcasting from Lvov since Sept. 18, 1600-1800 on 11825, and planned to add 5980; initially Wednesdays and Thursdays, later daily. Address is Ulitsa Vatutina 6, Lvov 290 005 (RMWS via BBCM) Name is Nezavennost (Fyodor Brashnikov, Irkutsk, via Jorma Mantyla, Finland, SW Echo via Kirk Baxter)

Second Republican program of Ukrainian Radio is 24 hours on 9560, 9720, 9785, 4940 (*ibid.*)

UNITED ARAB EMIRATES UAE Radio, Abu Dhabi, announced for English it would resume summer frequencies in winter, 13605, 15305, 17855, at 2200-2400 (Mrs. Leslie Edwards, PA, *W.O.R.*)

UNITED KINGDOM After intense lobbying by the Foreign Office, BBC separated its Serbian and Croatian services (*Daily Telegraph* via Max White and Jack Fitzsimmons, WDXC *Contact*) BBC will add Ukrainian service next year (TASS via BBCM! and *European Journal* via Terry Powers, CA) Plagued by interference on 15205, BBC's morning Antigua relay tried 17745, and then 17840 at least from 1430 to 1615.

UNITED STATES Your columnist conveys lots more news of shortwave and other media on *World of Radio*, now scheduled on WWCR: Fridays 2300 UTC on 12160, UTC Sundays 0405 on 7435; and on WRNO: UTC Sundays 0030 on 7355, 2130 on 15420; also up to 16 times a week on RFPI, Costa Rica, and on *Let's Talk Radio* via satellite--see last month.

W.O.R. is not scripted, but non-stop information; following it Saturday night on WWCR at 0435 UTC Sunday is *Signals*, concentrating on media other than SWBC, with regular phone-in contributors, commercials, lots of jingles and production; yet another approach on *Crossband* at 0530, a live show with call-ins; when it started, Steve Cole said it was experimental, at least until Dec. 7.

WWCR replaced 7520 with 7490 evenings and overnight, mostly for Dr. Gene Scott, especially weekends; and planned to shift 17525 to 17535 daytime to avoid Greece. Unhappy with breakdowns of transmitter No. 2, a Harris, WWCR was considering going Continenal for No. 3, not yet under construction, but frequencies approved for it are 5935, 9370. Whether on the same or different bands, the two transmitters have produced 2B-A or 2A-B mixing products heard by Alan Roberts, PQ in *CIDX Messenger*.

Impressed with the increased audience for *Prayerline*, weeknights at 0050 on WWCR 7435, its orignators in Upton, KY plan their own shortwave station, Worldwide Gospel Radio. FCC has already granted a construction permit at the site of their FM station WJCR, 90.1, SE of Millerstown, KY. Plans to convert two old 50 kW RCA AM transmitters, not a good idea as brand-new SW transmitters have enough problems; and use two corner-reflectors aimed 40 and 150 degrees (George McClintock, WWCR, *World of Radio*)

Eternal Word Television Network got a SW CP in September; four 500 kW Continentals in Alabama will feed eight TCI 611 curtains; to launch first quarter of 1993, 18-20 hours per day in 20 languages (Matt Scalici, EWTN)

VOA Chinese audible under CPBS-1 jamming on new 12040 (Bruce MacGibbon and Joe Hanlon, OR) Yes, VOA in a frequency range not used before, scheduled 1100-1700 via Philippines 250 kW parallel to 11965 (via Dan Ferguson, VOA)

VATICAN VR's new frequency turned out to be 5895 instead of the planned 5935 (BBCM)

VENEZUELA Exiled Haitian president Aristide made some broadcasts via Radio Nacional Venezuela, mid-October in English, Spanish, French, Creole for Haiti, during regular transmissions on 9540. Unconfirmed press reports say other Venezuelan transmitters would carry his clandestine broadcasts (Marty Delfin, RNV, *W.O.R.*)

Surprised to hear Radio Rumbos, 4970, in French before closing at 0504 (Bill Oxner, TX, *SW Echo* via Kirk Baxter)

A new government policy: to occupy as many SW frequencies as possible. Every Venezuelan who wants to start a SW station will get his SW license very soon and the MW license is added as a present. If somebody only wants a MW license, there is a waiting list (Marcel Rommerts, Holland, DSWCI *SW News*)

www.americanradiohistory.com

Broadcast Loggings

Thanks to our contributors -- Have you sent in YOUR logs?
Send to ***Gayle Van Horn,*** *c/o Monitoring Times.*
English broadcast unless otherwise noted.

0000 UTC on 11735
YUGOSLAVIA: Radio Yugoslavia. Sign-on into news and commentary on the Baltics."DX Program" to interval signal and sign-off at 0043 UTC. (John Carson, Norman, OK) (Robert Tucker, Savannah, GA)

0012 UTC on 9675
BRAZIL: Radio Cancao Nova. Portuguese. Excellent signal for Brazilian music, station ID/frequency quote and station address. Additional Brazilian stations include Radio Anhaguera on 0046 UTC on 11.830 kHz and Radio Universo at 0050 UTC on 9.565 kHz. (Oleg Shevelyou, USSR)

0020 UTC on 17705
CHINA: Radio Beijing. National newscast with good signal quality. "Listeners' Letterbox" audible on 11.685 kHz at 0450 UTC. (Carson, OK) Regional news and "Sports Scene" and chat on women's role in China. (Cralg Young, Okinawa, Japan)

0040 UTC on 15155
ECUADOR: HCJB. "DX Partyline" to newscast at 0040 UTC. Additional programming audible noted, 0035 UTC on 9.745 kHz, 0125 UTC on 21455 USB, 0239 UTC on 15.155/9.745 kHz. Excellent signal quality on 9.745 kHz at 0755 UTC. (Harold Bower, Sunbury, PA) (Bob Fraser, Cohasset, MA) (Tucker, GA)

0106 UTC on 7345
CZECHOSLOVAKIA: Radio Prague International. News and commentary on German policy toward Sudeten Germans. DX show at 0114 UTC and report on ballooning for tourists. (Tucker, GA) Audible on 7.345 kHz from 0315-0330 UTC. (Carson, OK)

0132 UTC on 9942
CLANDESTINE: La Voz del CID. Spanish. IDs and commentary. (Shevelyou, USSR) Anti-Castro talk with music on 7.340 kHz at 0202 UTC. Signal fade-out at 0253 UTC. (Tucker, GA)

0143 UTC on 7130
GERMANY: Deutsche Welle. Religious service with choral music to newscast at 0150 UTC. Additional programming heard on 9.545 kHz at 0323 UTC and 9.670 kHz at 0518 UTC. (Carson, OK) (Wright, MS)

0145 UTC on 5960
JAPAN: Radio Japan. "DX Corner" show on pirate radio. (Cralg Young, Okinawa, Japan) "Report From Asia" heard on 21.610 kHz at 0515 UTC. (Witham, HI) Radio Japan's Gabon relay noted on 11.735 kHz at 2340 UTC. (Shevelyou, USSR) (Carson, OK)

0159 UTC on 9570
ROMANIA: Radio Romania International. Interval signal and sign-on into newscast and commentary. Sign-on also noted at 0258 UTC on 11.940 kHz monitored *to* 0400 UTC. Discussion on Yugoslavia heard on 9.570 kHz at 0400 UTC. (Carson, OK)

0200 UTC on 11910
HUNGARY: Radio Budapest. Newscast, press review. "DX World" and tourist feature. (Carson, OK)

0208 UTC on 6085
GERMANY: Bayerischer Rundfunk. German. German folk tunes and Paul Anka's "Diana" in English. (Tucker, GA)

0245 UTC on 4920
ECUADOR: Radio Quito. Spanish. Latin folk tunes and frequent IDs. Good signal quality audible to 0330 UTC. (Dave Frenz, Milwaukee, WI)

0300 UTC on 11920
SOUTH AFRICA: Radio RSA. Sign-on national anthem into newscast. (Wright, MS) Additional monitoring with excellent signal quality at 0400 UTC on 11.860 kHz. Station IDs, news and music tunes. (Scott Billingsley, Camden, AR) English/Swahili service heard on 15.365 kHz at 1350 UTC. (Jack Davis, Birmingham, AL)

0320 UTC on 6135
SWITZERLAND: Red Cross Broadcasting Service. Program on the ICRC's relief efforts in Kuwait, Iraq and Colombia. (Tucker, GA)

0335 UTC on 5061
ANGOLA: Er do Huambo (tentative). Indigenous/Portuguese. Long-winded dialogue to 0350 UTC. Continued text until program sign-off and national anthem at 0404 UTC. (Jerry Witham, Keaau, HI)

0430 UTC on 7481
ETHIOPIA: Clandestine-Voice of the Tigray (tentative). Tribal style African music and chanting to radio drama at 0440 UTC. Sign-off without recognizable identification at 0458 UTC. Signal suffered from carrier drift and low modulation. (Witham, HI)

0430 UTC on 17770
NEW ZEALAND: Radio New Zealand. "Tagata Atu Motu" Pacific Islands magazine feature. Discussion on child abuse in the Pacific islands. (Tucker, GA) Audible on 9.700 kHz at 1207 UTC. (Young, Japan) (Carson, OK)

0445 UTC on 7255
NIGERIA: Voice of Nigeria. Interval signal and sign-on with ID and schedule. "Morning Flight" program of music and discussion of Nigeria resuming diplomatic relations with Iraq. (Tucker, GA) Audible on this frequency to 0550 UTC which included sports report and news review. (Carson, OK)

0449 UTC on 3270
NAMIBIA: Namibian Broadcasting Corporation. National and local news to classic rock tunes. Parallel frequency 3.270 kHz slightly weaker. (Frenz, WI) News, IDs and African music heard on 3.270 kHz at 1945 UTC. (Shevelyou, USSR)

0504 UTC on 4850
CAMEROON: CRTV-Yaounde. National and local news. Music variety of jazz and 60s folk tunes. (Frenz, WI)

0510 UTC on 3390
BOLIVIA: Radio Camargo. Spanish. Male DJ playing typical eastern Bolivian music. "Radio Disaurus de Chuquisarn des do Cuita de Camargo de Bolivia de Sud America" ID at 0530 UTC. Announcer then spoke of a festival which accounts for the station's extended programming. (*Special thanks to Chuck Boehnke for his assistance on this log.*) (Witham, HI)

0510 UTC on 5097
PERU: Radio Eco. Spanish. South American music with brief DJ's chatter. "Radio Eco" ID at 0515 UTC, repeated with echo effect at 0525 UTC. Poor signal copy. (Witham, HI)

0600 UTC on 9765
MALTA: Voice of the Mediterranean. Hostess Monica presents a program variety of text on volcanos, music and Maltese poetry and legends. (Frenz, WI)

0619 UTC on 7105
CONGO: RDTV-Congolalse. French. News and reggae music. English lesson prompt at 0630 UTC. Good signal on parallel frequency 9.610 kHz audible. (Frenz, WI)

0640 UTC on 17565
SWITZERLAND: Radio Swiss International. "Dateline" show with commentary and current world topics. Station ID at 0657 and musical interlude to Italian service at 0700 UTC. (Witham, HI)

1115 UTC on 9977/11335
NORTH KOREA: Radio Pyongyang. Usual communist diatribe of the young people's responsibility to keep the country clean. Plans included for planting flowers and the end of litter. The announcer proclaimed this latest national economic plan should be followed no matter how difficult. (Young, Japan) South Korea's Radio Korea, heard on 15.575 kHz at 1650 UTC. (Wright, MS) Russian service noted on 5.975 kHz at 1916 UTC. Shevelyou, USSR)

1212 UTC on 9725
COSTA RICA: AWR-Costa Rica. Music and religious programming. (Tucker, GA) (Fraser, MA) Religious "Your Story Hour" and "Costa Rica Today" heard on 9.725 kHz at 2355 audible to 0035 UTC. (Carson, OK)

1226 UTC on 15010
VIETNAM: Voice of Vietnam. Japanese. Traditional Vietnam music and talk. English service at 1230 UTC. (Young, Japan) Audible at 1230 UTC on 15.009 kHz. (Tucker, GA) Monitoring continued on this frequency to 1345 UTC. (Wright, MS)

1238 UTC on 7445
TAIWAN: Voice of Asia. Indonesian. Kenny Roger's music and talk. (Young, Japan) Voice of Free China via WYFR audible on 17.750 kHz at 2230 UTC. (Carson, OK) (Bower, PA) (Wright, MS) Indonesian service heard on 7.445 kHz at 1500 UTC with talk, news and music. (Shevelyou, USSR)

1255 UTC on 6055
JAPAN: Radio Tanpa. Japanese. Regional and world news at 1300 UTC. (Young, Japan) Also heard on 3.925 kHz at 1428 UTC. (Shevelyou, USSR)

1300 UTC on 11865
PHILIPPINES: FEBC. International news on India and the USSR. Additional headlines at 1330 UTC. (Scott Billingsley, Camden, AR)

1328 UTC on 9710
AUSTRALIA: Radio Australia. Pop music and show "Whole Lotta Things To Sing About." (Young, Japan) Additional monitoring on the following: 17.795 kHz at 0400 UTC, 15.160 kHz at 0510 UTC, 11.720 kHz at 1200 UTC. (Carson, OK) (Wright, MS)

1347 UTC on 13675
UNITED ARAB EMIRATES: UAE Radio-Dubai. Medical field in the Arabic countries discussed. (Carson, OK) Classical music and ID at 1629 UTC on 21.605 kHz. (Tucker, GA)

1501 UTC on 15355
NORWAY: Radio Norway. News and IDs audible with good signal quality. (Tucker, GA) Interview with foreign minister on 21.705.5 kHz at 2200 UTC. (Frenz, WI)

1545 UTC on 3355
INDIA: All India Radio. International news read by the features editor of "India Today." Editorial on the continued world wide tensions over Iraq. Music to station ID at 1600 UTC. (Witham, HI) *Special thanks to Jerry and his colleagues at Puna DX Club.-ed.*

1937 UTC on 15770
ICELAND: Icelandic National Broadcasting Service. Icelandic. Talk into newscast, suffering from static and weak signal. (Tucker, GA) (Wright, MS)

2030 UTC on 13700
NETHERLANDS: Radio Netherlands. "Happy Station" with live listener phone-ins. (Fraser, MA) Heard on 6.020 kHz at 0055 UTC. (Carson, OK)

2130 UTC on 15690
UNITED STATES: WWCR. Religious programming with good signal quality. Additional monitoring on 7.520 kHz at 0130 UTC. (Carson, OK) Interview with editor of UFO magazine and Radio Network news on the half-hour. (Tucker, GA)

2304 UTC on 7270
POLAND: Radio Poland. National newscast, music program, and "Panorama" show. Good signal for monitoring. (Frenz, WI)

Utility World

Larry Van Horn
c/o MT, P.O. Box 98
Brasstown, NC 28902

Well folks, the results are in for the first *MT* Ute World Top 10 Favorite Ute Frequency poll. I would like to thank all of you who contributed to the fun. If you were at the *MT* Knoxville 91 convention, then you have had a preview of this list. For the rest of you, here is the 'Top 10' including the ties:

1.	6761 kHz	SAC channel S-391/Quebec
2.	5696 kHz	Coast Guard Air/Ground channel (nights-pri)
3.	11176 kHz	USAF GCCS channel
4.	8993 kHz	USAF GCCS channel
5.	11246 kHz	USAF GCCS channel
6.	8984 kHz	Coast Guard Air/Ground channel (days-pri)
7.	20193 kHz	NASA Ascension Island MUX channel (Space Shuttle audio)
	11200 kHz	RAF VOLMET
8.	13247 kHz	SAC channel W-109/Mystic Star frequency
9.	9242.2 kHz	AFRTS Broadcast Feeder
	11300 kHz	Africa-3 MWARA
	500 kHz	International Marine Distress channel
10.	6840 kHz	Popular numbers channel
	11243 kHz	SAC channel S-393/Alpha
	13244 kHz	USAF GCCS channel
	2670 kHz	Coast Guard Broadcast channel

The winner of our random drawing from the submissions is a gentleman who lives in the UK. Due to the radio monitoring issue in the UK, we will only refer to our winner as "David." I certainly don't want to get him in trouble by identifying him in this column as a radio listener. Congratulations, David; a print-out of my ute database should be in your hands by now. Thanks to all who contributed to the contest; do you want more of these in the future? Let me know.

New Marine Frequencies in Australia

It was nice to renew friendships at the *MT* convention. A real bonus was to see Mark Hanrahan, a cameraman/communication expert with TV-7 news in Brisbane, and Bob Bell, of Yagoona, NSW, publisher of the *Australian Airband Guide*. As they did last year, Mark and Bob had a package of material on the latest ute action from the land down under.

They passed on to me the new list of marine radiotelephone frequencies in use by Australian marine stations since the WARC-87 conference frequencies took effect on July 1, 1991. Those of you wondering where the Aussie's went on the marine frequencies should consult the following list:

Ship/Shore Frequency Schedule

Station	Call	Channel	Shore	Ship	Schedule
Adelaide Radio	VIA	412	4390	4098	On request
		419	4411	4119	0800-2000

Townsville Radio	VIT	404	4366	4074	On request
		412	4390	4119	On request
		419	4411	4119	0600-2200
		817	8767	8243	0600-2200
		822	8782	8258	On request
		1203	13083	12236	On request
		1231	13167	12320	0800-1800
		1612	17275	16393	0800-1800

Channels indicated with a time (all times are local Australian times) are available immediately. Ship just have to call on the frequency and the indicated station will answer. Channels indicated as "On Request" are available after initial contact is made on another channel/frequency.

All these channels are full duplex with the ships on one channel and the shore stations on another channel. You will probably hear both types of stations using channel numbers, so I have included those channel numbers in our list.

A tone alert system uses a two-tone signalling system fitted to some mobile HF sets enabling callers to alert shore station operators with audio and visual alarms for prompt assistance. The following marine stations can use the tone alert system: Sydney, Perth, Brisbane, Townsville, Darwin and Melbourne. SELCAL (Selective calling) is available for all suitably equipped ships and land mobile stations using marine frequencies.

There is another set of major services in Australia that can be heard worldwide from time to time. A lot of folks are interested in the Royal Flying Doctor Service, the St. John Ambulance & School of the Air

www.americanradiohistory.com

Outpost radio stations. Mark and Bob have provided the latest update on these services also:

Station	Call	Royal Flying Doctor Svce	Radiotelephone	School of the Air
Derby	VJB	5300/6945	5300/6945	5650/6925

Broken Hill	VJC	2020/4055/6920	4055/6920	4635/5130/7565/8150

The Royal Flying Doctor Service is a fascinating story of aviation, medicine and radio that have been jointly put to work in the service of the people who live and travel in the remote in-land areas of Australia. The service was established at Cloncurry on May 15, 1928, and it provides free medical care to people in remote areas of Australia. The School of the Air (called School of Distance Education in Queensland) provides schools over the radio to students in the Outback and remote areas of Australia. All these services are provided free of charge and the system operates via donations from the public.

USSR Naval Update

M.L. (Gib) Gibson, W7JIE in Renton, Washington, has provided an update of our October feature regarding the Soviet Navy. Gib is a monitor for the IARU (International Amateur Radio Union) checking for non-amateur radio signals in the ham bands.

Gib says that one of his constant signals is "UMS." He says with the help of the field operations bureau of the FCC (Federal Communications Commission) in Washington, DC, the following information regarding "UMS" has been verified.

"UMS" is originated by two different stations. One is located near Murmansk in northern Russia, the other is near Petropavlovsk on the far east coast of Russia. Both stations transmit the same type of traffic, that is, naval traffic using F1B and A1A transmissions. Murmansk is identified by the sending of A1A dots when there is not a traffic transmission. Petropavlovsk just goes silent. The following amateur radio frequencies have been used by "UMS":

21032	Petropavlovsk
21284	Murmansk
14171	Murmansk
14141	Petropavlovsk
18152	Murmansk
7007	Murmansk (Both stations have used this frequency even at the same time, but Murmansk uses it the majority of the time.)

Each station has a definite schedule of frequency utilization depending on the time of day, day of the month, and month of the year.

Gib also provides the following list of intruders to the amateur radio bands heard recently:

CMU967	Cuba	18167
LRO84	Argentina weather FAX	18093
RWB24	Vladisvostok, USSR	18090
'K'	Beacon 'K', USSR	7039
'V'	Beacon Vladisvostok,USSR	7002

Gib says that China sends A1A marker pulses and F1B data burst on: 14058, 15063.7, 14307, and 21427. This station is located near Guangzhou (Canton), China.

Many thanks, Gib, on behalf of all the *MT* Ute World listeners for your continued valuable insight into some of the strange signals we hear on the utility bands.

Russian Maritime Update

New contributor Stewart Todd Morgan from Raleigh, North Carolina, has just passed on some interesting information regarding Soviet third-shift cyrillic transmission he has noted since the WARC-87 band plan took over on July 1, 1991. Todd says that although some Soviet vessels are still using the old frequencies, most of the activity on 8, 12, 16, 22, and 25 MHz has shifted. Todd says that he has not had time to determine the exact boundaries for the new RTTY bands, but the following ranges will give ute enthusiast a good idea where to look:

8 MHz	8385 - 8405 kHz
12 MHz	12555-12575 kHz
16 MHz	16780-16805 kHz
22 MHz	22350-22360 kHz
25 MHz	25190-25205 kHz

Todd has noted some stations in the range of 16705 - 16780 kHz, but not nearly as many as in the band given above. He still doesn't have a handle on the 4 and 6 MHz marine bands. Thanks, Todd, for the input. Now let's see what our veteran Russian ship reporter, Sam Ricks in Philadelphia, Pennsylvania, has to add.

The Soviet SESS spaceflight tracking ship nets have changed frequency, although they seem to have maintained their schedule. The 0305 and 2205 UTC nets, formerly on 8418 kHz, have moved to 8375 kHz. Currently, only the NIS Akademik Sergei Korolev [UISZ] and the NIS Kosmonaut Georgi Dobrovolskiy [UZZV] are at sea. Sam has not yet identified the other two net frequencies.

Sam also mentions that he has noticed a significant drop in scientific expeditions from prior years. Other than daily traffic from the traffic ships and Hydromet weatherships, few 'NIS' ships are operating.

However, recently in the 8 MHz simplex NBDP (Narrow Band Direct Printing) bands, he has picked up strong signals from the NIS Professor Zubov [UMFW] contacting RNO-Moscow, the Soviet Arctic/Antarctic Meteo Center. That ship operated in the Caribbean until October, then returned to Leningrad via Rotterdam.

During one session with RNO, Zubov inquired about their sister ship the NIS Professor Vize, the icebreaker NIL Akademik Fedorov, the Antarctic supply ship NIS Mikhail Somov, and RUZU, the Soviet base at Molodezhnaya, Antarctica. Despite economic conditions within the Soviet Union, the Soviets apparently are still funding their annual Antarctic expedition schedules.

Thanks a bunch, Sam, for that update; as always we look forward to more of your incisive looks at the Soviet maritime scene.

Loggings Update

Helmut Klain over Austria way says that the 18145 logging in the August issue of this column is probably an amateur radio station RA9YD. Helmut's ham call is OE1TRW.

A.L.B. Jansen provides us with a spelling correction to some Dutch place names we had in the June logging column. He is located at Utrecht, Netherlands. They are as follows: PBB-3 Den Helder; PBG-3 Walcheren; PBU-3 Hoek van Holland.

Thanks, to both of you, for the updates. Maybe Gayle and I will get to visit my Dutch homeland someday. But for now, let's check out what else you have been hearing in the Utility World.

CANFORCE	Canadian Forces	Nav	Navigation
CAP	Civil Air Patrol	NDB	Non-directional Beacon
CG	Coast Guard	Op	Operator
Comms	Communications	Ops	Operation(s)
COMSTA	Communications Station	QRA	What is the name of your station?
CW	Morse Code	QSY	Change frequency
DEA	Drug Enforcement Agency	RCAF	Royal Canadian Air Force
Dept	Department	RPM	Revolutions Per Minute
DF	Direction Finding	SAC	Strategic Air Command
DXing	Distant station monitoring	SAM	Special Air Mission
ETA	Estimated Time of Arrival	SAR	Search and Rescue
FAA	Federal Aviation Administration	UK	United Kingdom
FAX	Facsimile	Unid	Unidentified
FM	Frequency Modulation	US	United States
GCCS	Global Command and Control	USCG	United States Coast Guard
helo	helicopter	USCGC	United States Coast Guard Cutter
HF	High Frequency	USS	United States Ship
HICOM	High Command	USB	Upper Side Band
ID	Identification	wpm	Words Per Minute
IFE	In Flight Emergency		
KCNA	Korean Central News Agency		

All frequencies in kilohertz (kHz), all times in UTC. All voice transmissions in English unless otherwise noted.

147.3 DDH47-Hamburg Meteo, Germany with coded RTTY weather broadcast at 1845. (Ary Boender-Netherlands)

277.0 ACE-Homer, AK NDB with FAA weather. (Timothy Coucke-Anchor Point, AK) *Welcome to Ute World Tim, nice to hear from Alaska-The Chief.*

317.0 CXO-Unid NDB with an S5 signal. (Coucke-AK) *I have a listing for a CMU on 316 but the location is unknown to this writer-The Chief.*

338.0 CMQ-Anchorage, AK NDB with FAA weather parallel to 277.0. (Coucke-AK)

368.0 DRF-Kenai, AK NDB with Morse ID. (Coucke-AK)

379.0 IWW-Kenai, AK NDB with FAA weather parallel others. (Coucke-AK)

394.0 RWO-Kodiak, AK NDB with FAA weather parallel others. (Coucke-AK)

400.0 AK-King Salmon, AK NDB with Morse ID. (Coucke-AK)

410.0 WIBK-M/V Cherry Valley using CW for DF activities at 1012. UEWE-M/V Gamal Abdul Nasser sending CW 'DE UEWE' at 2135. 3ERX3-M/V Magdang Ilog using CW for DF activites at 1917. (Boender-Netherlands)

418.0 GNF-North Foreland Radio, UK working unid ship with CW at 1922. (Boender-Netherlands)

421.0 PCH-Scheveningen Radio, Netherlands passing new maritime frequencies in CW at 2053. (Boender-Netherlands)

425.0 UFMA-M/V Volga sending a CW message at 0540. TFJX-M/V Saerun in CW at 1954 sailing to Rotterdam for bunkers. UKFG-Unid Soviet vessel calling DAN-Norddeich Radio in CW at 1853. (Boender-Netherlands)

429.0 3EJC5-M/V Star Miranda with CW messages at 1616. OXB-Blaavand Radio, Denmark working an unid ship in CW at 2147. (Boender-Netherlands)

444.0 ATGP-M/V Visdhva Ambar calling DAN in CW at 2050. 3EGG3-M/V Esmeralda 1 working Norddeich Radio in CW at 2108. UJBT-M/V Neva with a message to MORFLOT Copenhagen in CW at 1943. DAN-Norddeich Radio, Germany with a CW nav warning at 2025. (Boender-Netherlands)

447.0 OXJ-Thorshavn Radio, Denmark (Faroer) with a CW traffic list at 0700. (Boender-Netherlands)

450.0 FFB-Boulogne-Sur-Mer Radio in CW with nav warnings at 1925. (Boender-Netherlands)

454.0 UYOQ-M/V Rostov to pilot Hoek v. Holland in CW at 2000. JHRE-M/V Fuyoh Maru calling FFB in CW at 2012. SZVP-M/V Kavo Yerakas calling PCH in CW at 0638. ESRE-M/V Kazis Preikshas requesting a pilot in CW at 1852. UNXR-M/T Kaliningradneft calling PCH in CW at 1155. SVST-M/V Aetos calling PCH in CW at 1900. LLSW3-M/V Berge Duke heard sending CW at 1800. UACU-M/V Varne Miounde requesting a pilot in CW for Flushing at 0752. (Boender-Netherlands)

468.0 SZNA-M/V World Argus sending ETA in CW at Antwerp at 0850. (Boender-Netherlands)

474.0 DAN-Norddeich Radio, Germany with a nav CW warning at 2052. (Boender-Netherlands)

482.0 WSC-Tuckerton Radio, NJ with a CW traffic list at 0225. (Boender-Netherlands)

484.0 ELAX9-M/V Product Trader working Cullercoat Radio in CW at 0525. (Boender-Netherlands)

500.0 ATVA-M/V Vishva Pallav calling GNF in CW at 2020. (Boender-Netherlands)

512.0 UFEE-M/V Vassia Stabrovskii sending messages in CW at 2105. (Boender-Netherlands)

2614.0 DAN-Norddeich Radio, Germany sending a traffic list in USB at 2050. (Boender-Netherlands)

2716.0 USS Reuben James calling Army Star control at 1150 in USB. (Scott Burke-Tucson, AZ)

3121.0 NMN-USCG COMSTA Portsmouth, VA testing here with CG helo 6002 (HH-60). Also heard on 8984 and 5696, stated that helo was to test HF radio all that evening. (Bill Battles-E. Kingston, NH)

3684.0 FMV-French Naval Station Lyon with an ARQ-E message to RFFIC (Marineyems Paris) at 1956. (Boender, Netherland)

3814.0 FDC-French Air Force Metz with V CW marker at 1928. (Boender-Netherlands)

4185.0 ELAD2-M/V Ira with a CW message to Stratandre London regarding the spum pilot at 2220. (Boender-Netherlands)

4369.0 WLC-Rodgers City Radio, MI working ship "Buckeye" in USB at 0556. WLO-Mobile Radio, AL with Caribbean marine weather in USB at 0500. ('Ranger' Rick Dettmann-Buffalo Grove, IL)

4399.0 Two fishing boats in comms about fishing ops and the weather. One was just in sight of Nantucket., MA and the other off Chatham, MA. In USB at 0105. (Bill Fernandez-MA)

4420.0 WOO-Oceangate Radio, NJ with phone patches in USB to Queen Elizabeth II at 0128. (Dettmann-IL)

5240.0 The now famous "Foghorn" heard at 0219. (Fernandez-MA)

5547.0 Various aircraft working San Francisco Aeradio in USB at 0854 in USB. (Bill Burghardt-Denville, NJ)

5629.0 Yankee November number station heard in AM at 0235. (Fernandez-MA)

5680.0 USCGC Campbell and CANFORCE Rescue 106 with a SAR case comms at 0238 in USB. (Battles-NH)

5690.0 RCAF Lahr, Germany with male operator giving terminal weather forecast/conditions at bases across the UK and west Europe at 0317 in USB. (Fernandez-MA)

5696.0 Papa 33 working COMSTA Miami at 0202 in USB. Requested that Slingshot come up on 5696 due to no-joy on VF & YC channels. Said they know our destination (drug ops). (Battles-NH)

5940.0 Spanish female 4-digit number station in AM at 0400 (Wednesday UTC). (Thomas Mazanec-Maple Heights, OH) *Welcome to Ute World Tom, Hope to see some more of your numbers logs in the future-The Chief.*

6263.0 CBRB-M/V Rubens with an SITOR RTTY message giving ETA at Helsinki at 2022. (Boender-Netherlands)

6510.0 WCM-Withamsville Radio, Ohio working a tug towing a barge in trouble in USB at 0152. (Fernandez-MA) Working various ships in USB around 1844. (Dettmann-IL)

6519.0 USCGC Thetis (WMEC-910) at 0200 with a phone patch via NMG-USCG COMSTA New Orleans, LA. in USB. (Mike Hardester-Jacksonville, NC)

6683.0 AF-1 working Andrews AFB in USB at 1630. (Chuck Snider-Brookline, MA)

6693.0 Merlin 22 working Halifax Military with HF radio check at 2213.(Battles-NH) Russian VOLMET with Russian weather in USB at 0200. Very strong. (Hosegood-UK)

6697.0 Various letter-number-letter stations working each other in USB at 0922. US Navy HICOM. (Burghardt-NJ)

6761.0 Numerous stations over a 2 hour period starting at 0407 in USB here on SAC Quebec/S-391 working each other. Main stations included Tricycle, Override, Sunshine, Pullover, Artbook. (Mike Elder, NSJNN-Highlands, TX) *Welcome to the column Mike, hope you report often-The Chief.* Coho 42 and Crystal discussing a bomb run and the fact that the aircraft had 'taken a hit' on the lower right side of the aircraft, unknown damage, no vibrations. Pilot declined to declare an IFE. In USB at 0231. (Judge Charley Horan-Los Angeles, CA)

6812.0 Air Force One working Andy (Andrews) departing Pease AFB enroute Andrews at 1506 in USB. SAM 29000 also heard up here as standby for 28000 then cleared to Andrews. (Battles-NH)

7445.0 KPA2-Israeli Mossad number station in AM at 0216. (Fernandez-MA) Heard at 0018. (Boender-Netherlands)

7475.0 Endowment and Marigold (EC-135) in comms at 0204 using USB. SAC frequency W-104. (Battles-NH)

7605.0 VLB2-Israeli Mossad station in AM at 0403 mixing with WWCR (7435). (Hardester-NC)

7635.0 Blue Chip 13 (Tennesse CAP) with a roll call of stations around the country at 1230 in USB. (Henry Brown-East Falmouth, MA)

www.americanradiohistory.com

7703.0 Heard a station (Alabaster?) sending a 76 item EAM at 1947 and again at 2048 in USB. (Goff-Vienna, ME) *Interesting, Bill take note of this one also-The Chief.*

8063.0 German female 5-digit number station in AM at 0514. (Dettmann-IL)

8258.0 "KMI, KMI, KMI This is the Sky Princess, Station Golf Yankee Yankee Papa channel 822. How do you copy?" Heard at 0655 in USB. Who is this? (Kraig S. Black-El Toro, CA) *Kraig, that is GYYP, the cruise liner Sky Princess, calling shore station KMI in Point Reyes, CA for traffic. These channels are full duplex channels for radiotelephone phone patches between ships and shore stations (primarily AT&T in this country). Welcome to the column-The Chief.*

8355.0 LHFC3-M/V Hestia sending SITOR RTTY message about ETA off Falmouth at 1946. (Boender-Netherlands)

8638.5 DAM-Norddeich Radio, Germany with CW marker at 2228. (Fernandez-MA)

8679.0 IQX-Trieste Radio, Italy sending a CW V marker at 1938. (Boender-Netherlands)

8722.0 WOM-Ft. Lauderdale, Fl (AT&T Radio) working the ship Rosemary at 0518 in USB. (Dettmann-IL)

8758.0 WOM-Ft. Lauderdale (AT&T Radio) working "Marie Anne" in USB at 0236. (Dettmann-IL)

8776.0 Many letter-number-letter call signs including some tactical calls (i.e.-Overwork, Sierra Status, etc) at 0915 in USB. Close to Navy HICOM on 8778 but definitely 8776. Heard circuit designator Sierra-Sierra-102-Alpha. Who is this? (Brown-MA) *Henry this is definitely a Navy Hicom. This is the frequency they have apparently settled on after the July 1 Maritime band realignment-The Chief.*

8790.0 WLO-Mobile Radio, AL working Carnival Ecstacy in USB at 0432. WOM-Ft. Lauderdale working Carnival ship Holiday in USB at 0358. (Dettmann-IL)

9030.0 Two male spanish operators DXing Marijuana (oops?). Heard military terms and Washington mentioned several times. Mexican or South American army channel? Heard at 0930 in USB. (Burke-AZ) Wierd log Scott, you win this month's wierd log award-The Chief.

9251.0 English female 5-digit number station in AM at 2201. (Fernandez-MA)

9329.0 Spanish female 5-digit number station in AM at 0500 (Tuesday UTC). (Mazanec-OH)

9334.3 AFRTS broadcast feeder Croughton, UK with program ID then news at 2200. (Fernandez-MA)

10017.0 German female 3/2-digit number station in AM at 0108. (Burghardt-NJ)

10153.0 Unid station sending RTTY 5-figure coded messages at 2037. (Boender-Netherlands)

10322.0 Lab 3 talking to base about construction error. Also mentioned Lab 1 drilling at the summit in 1330. Sounds like Canada Oil/Mineral exploration. (Goff-ME) *Good question Ron, I don't list this one on any of my lists-The Chief.*

10601.0 Spanish female 4-digit number station in AM at 2200 and 2300 (Friday UTC). (Mazanec-OH)

10635.0 KKN50-State Dept radio, Warrenton, VA with a CW QRA marker at 0110. (Bob Pettengill-Blanchard, OK)

10648.0 In LSB at 0155 a female operator said, "Durant, Durant, this is Emery Board, do you copy?" After several tries (by female op) a male voice tried, "Come on Andrews AFB where are you? Durant, this is Emery Board, do you copy?" Female voice again, "Would you like to QSY your transmit to Alpha Juliet?" Eventually, Emery Board responded with, "Have you 3X, QSY your Alpha Juliet, our receive Charlie, Charlie." (Tom Miner-Concord, NH) *Interesting Tom, I don't think this was Mystic Star, I believe this is a new SAC channel; Bill Battles take note-The Chief.*

10665.0 Spanish female 4-digit number station in AM at 0033. (Neal Smith-Mannchester, MO)

10945.0 CFH-Canadian Forces, Halifax, NS Canada with a 15 wpm CW marker consisting of the stations operating frequencies - 3287 4158 6242 8318 12392 16576 22194 at 2353. Oddly, the frequency that I copied them on wasn't listed. (Bill, San Antonio, TX) *Welcome back Bill, not sure on the last logs, I think they were used-The Chief.*

11056.0 Executive Foxtrot One (1st Lady) working Andrews at 1710 in USB enroute to Washington, DC. (Battles-NH)

11104.0 Long comms from USCGC Tahoma, Cape Radio and King 1 regarding the rescue of a man in the water from 1934-1946. Tahoma launched a HH-65 helo per request of King 1, much confusion over the UHF frequencies they were going to use, in USB. (Battles-NH)

11201.0 CG 6008 testing HF radio with NMF-Boston (new helos) heard 1352 in USB (these UH-60 models are to replace the HH-3F helos in present CG service). (Battles-NH)

11229.0 AFRTS broadcast feeder with music in USB at 2148. (Goff-ME)

11246.0 MacDill AFB, FL GCCS working 40651 concerning aircraft RPM problems in USB at 1432 in USB. (Rick Moore-Versailles, KY)

11267.0 Y1V asking for a radio check at 2300 with no answer in USB. (Hosegood-UK)

11467.0 HMF52-KCNA Pyongyang, North Korea at 0014 with FAX pictures. (Donald Nyre-Newport Beach, CA)

11605.0 Unid station sending USMC MARSGRAMS from Camp Butler, Okinawa using SITOR-A at 2350. (Bill-TX)

11633.0 Unid station with 5-letter Morse groups at 15 wpm at 0006. (Bill-TX)

12260.0 English female 5-digit number station in AM at 0232. (Fernandez-MA)

12714.0 UUUA-M/V Styr with CW cyrillic messages at 1948. (Boender-Netherlands)

12984.0 4XZ-Israeli Naval Radio Haifa with CW comms at 0310. (Pettengill-OK)

12992.0 WLO-Mobile Radio, AL using SITOR-B at 0004 concerning WARC-87 marine frequencies. (Bill-TX)

13092.0 WOM-Ft. Lauderdale AT&T radio with offshore weather and phone patch traffic at 2100 in USB. (Scott Billingsley-Camden, AR) *Welcome to the column Scott, please report often-The Chief.* Heard at 0010 with traffic list. (Burghardt-NJ)

13205.0 SAM 203 requesting phone patch to Andrews AFB in regards to a C80C computer failure. 203 in Mexico City enroute to Peru, Venezuela and Brazil. Using USB at 1440. Anyone know what SAM flight number James Baker uses? (Burle-AZ) *Scott, normally SAM 972 is associated with the Secretary of State. having said that, a lot of times it depends on the Secretary (his preference) and aircraft available-The Chief.*

13312.0 Test Control 01 calling Boeing 681 asking why he is returning early. All tests completed earlier than expected. Went to 172.550 MHz (FM) to test radio. Heard every Friday in a.m. for several weeks in USB. (Burke-AZ)

13412.0 MAC 70166 working Andy in USB. MAC flight had no Mystic Star frequency list so Andy had to give clear voice frequencies when changed. This aircraft was traveling with AF-1. (Batteles-NH)

13416.5 CCS-Santiago, Chile with RTTY RY marker at 0010. (Bill-TX)

14069.0 Unid station with news stories in German using SITOR-A at 0056. (Bill-TX)

14358.6 Spanish female 4-digit number station in AM heard at 0121. (Judge Horan-CA) *Welcome to the column Judge, feel free to report often-The Chief.*

14840.0 NNN0CVX-USS El Paso (LKA-117) working NNN0NIK-Mayport, Fl with Navy MARS phone patch traffic in USB at 0229. (Pettengill-OK)

15000.0 WWV-Time Station Ft. Collins, CO with time signals and ID in AM at 0012. (Boender-Netherlands)

15920.0 CFH-Canadian Forces, Halifax, NS with the same CW marker (as on 10945) on another unlisted frequency at 0056. (Bill-TX)

16000.0 VNG-Time Station Lyndhurst, Australia with time signals at 0008 in AM. (Boender-Netherlands)

16180.0 NMN/NAM/NAR in CW at 23 wpm. Weather for NAVAREA IV and a list of USCG voice channels and their assigned frequencies, followed by a 16 wpm marker at 0151. (Bill-TX)

16928.4 LFX-Rogaland Radio, Norway with CW CQ marker at 1930. (Boender-Netherlands)

16950.0 6WW-French Forces, Dakar, Senegal with a 20 wpm CW V marker at 0030. (Bill-TX)

16976.0 NMN-USCG COMSTA Portsmouth, VA with a 23 wpm CQ CW marker at 0120. (Bill-TX)

17242.0 WOM-Ft. Lauderdale, FL (AT&T Radio) working a phone patch with "Charlie West" in USB at 1330. (Dettmann-IL)

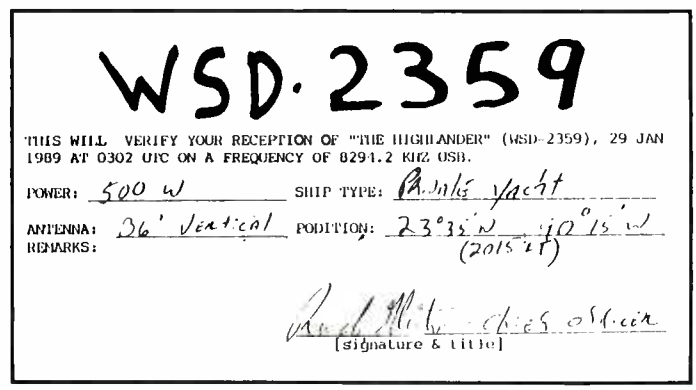
17245.0 Portishead Radio, England working a phone patch with MKWP7 in USB at 1748. (Dettmann-IL) *All I can say Rick is the ship call sign is from the UK-The Chief.*

18002.0 Sentry 61 (AWACS aircraft) working several stations in USB at 1530. (Robert Wilceynski-Indian Orchard, MA)

18009.0 Letter-number-letter call signs running in a net at 2248 in USB. (Chris Hulse-Eugene, OR)

18171.0 Swordfish 16 calling Miami Air via Atlas (*DEA in DC-Chief*) phone patch about airplane oil problems in USB at 2243. (Hulse-OR)

21751.0 English female 3/2-digit number station in AM at 2130. (Billingsley-AR)



This QSL verified Patrick O'Connor's, Hinsdale, New Hampshire, reception of a private yacht.

The Scanning Report

Bob Kay
c/o MT, P.O. Box 98
Brasstown, NC 28902

Christmas Trains

The control panel contained an impressive array of switches and blinking lights. The section of railway that I controlled was represented on the panel by several thin, green lines. Suddenly, the dispatcher called out to me, "The 7 PM freight will be delayed by 5 minutes."

"Okay," I replied, "I'll be looking for him."

Looking over my shoulder, the regular switchman guided my actions. "You're going to have a collision, if you don't do something with that passenger train."

"What passenger train?" I asked.

The switchman slowly shook his gray head. "Look at your schedule. Isn't there a passenger train due at 7:05?"

A quick glance at the schedule confirmed that he was right. "What should I do?" I asked.

He nodded toward the tracks. "You got about three minutes to figure it out."

I checked the side track. It was clear. I decided to hold the freight on the side, and let the passenger train pass by. Reaching across the control panel, I confidently flipped the appropriate switches to align the track.

"Is that your solution to the problem?" He asked.

"That should do it," I said.

Without warning, Bob Parks, the switchman who had been helping me, quickly pressed the emergency stop button.

"What did I do wrong?" I asked.

Bob pointed to the main track switch. "It's in the wrong position. The passenger train would have collided with the freight."

Although I was only controlling HO scale model trains, the excitement was intense. The train club had a layout that measured 5 feet by 15 feet. The control of the trains was very similar to real life situations. And as I quickly learned, the switchman's job was the most difficult.

At first glance, it seemed rather comical: grown men, playing with model trains. But the club members were quick to point out that they were equally amazed by my hobby of spending hours sitting behind a "Police Scanner."

"You can hear a lot more than just your local police," I promptly retorted. To prove my point, I set my handheld to scan between the railroad frequencies of 160.00 and 162.00. Within seconds, the squelch opened, and the room was filled with the voice of the Philadelphia commuter train dispatcher.

"That sounds like Charlie's voice!" one of the club members said excitedly.

I pushed the "monitor" button and allowed everyone to listen.

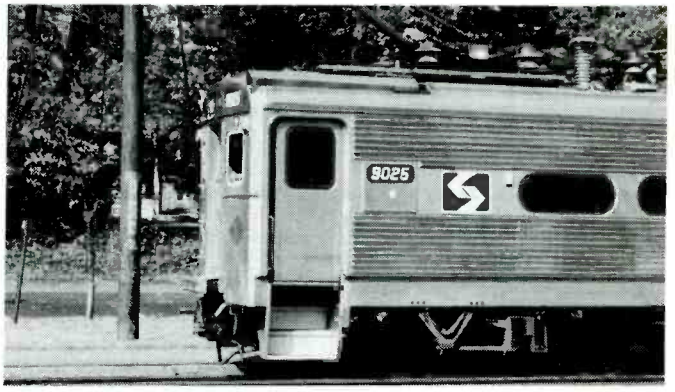
"That's him," someone shouted. "He's working 2nd shift."

A club member pointed to my old Pro-30. "How much does that thing cost?" he asked.

"You can buy a no frills, table top model for less than a hundred bucks," I said.

During the remainder of the evening, we discussed and listened to the train activity in the city. The club members were surprised to learn that there were dozens of train frequencies that could be monitored.

I was surprised to learn that the newer trains were radio controlled. It was possible to run a locomotive in the same manner as radio controlled cars and airplanes. The locomotive could draw its power from the track, or it could utilize an internal battery. Since radio frequencies were being utilized, I could see the need for a "frequency coordinator" in the near future.



Are you setting up the trains this Christmas? If so, read the Scanning Report to discover the frequencies used by real life trains in your area.

As I said good-bye to my new friends, they gave me a handmade built-from-scratch box car. To return the favor, I promised to help them set up and program the club's new scanner radio.

When I arrived home, my wife noticed the model train. "What are you doing with that?" she asked.

I was hesitant to tell her I was thinking about buying a train set. She still hadn't forgotten about the new scanner radio I had recently purchased. "I... was thinking about buying a set of trains?" I said with a degree of caution.

"That would be nice," she said smiling. "The kids love to play with trains at Christmas."

"You're right," I said with a big grin. "The 'kids' will love it!"

Treasure Hunt

This is your final chance to win the best tape saving device on the market. The ScanRecord by Capri Electronics is battery operated, completely portable, and it can easily capture a full day of scanning activity on a standard, 90 minute cassette. Here are the clues: All the answers can be found in the September 1991 issue of *MT*.

1. What is a Shinwa SR001?
2. On what page can you find the words: Silk Purse Scrapped?
3. If you order a CPL-63, from Grove, what will you get?
4. The longer the antenna, the lower the frequency. True or False?
5. Provide the transmission mode for aircraft communications.

The ScanRecord is a state-of-the-art unit that does not use mechanical relays. The convenient A/B switch allows the user to manipulate the tape recorder without having to disconnect the recording plugs. Best of all, the ScanRecord is modestly priced at $47.00 dollars. For further information, contact Capri Electronics, 1238 Hwy., 160-B, P.O. Box 589, Bayfield, CO 81122; (303) 884-9084.

Frequency Exchange

All aboard! If you're looking for ***train frequencies***, here's a comprehensive list that will help you to locate the active frequencies in your area.

159.810	160.440	160.725	161.010	161.295
159.930	160.455	160.740	161.025	161.310
160.050	160.470	160.755	161.040	161.325
160.185	160.485	160.770	161.055	161.340
160.200	160.500	160.785	161.070	161.355
160.215	160.515	160.800	161.085	161.370
160.230	160.530	160.815	161.100	161.385
160.245	160.545	160.830	161.115	161.400
160.260	160.560	160.845	161.130	161.415
160.275	160.575	160.860	161.145	161.430
160.290	160.590	160.875	161.160	161.445
160.305	160.605	160.890	161.175	161.460
160.320	160.620	160.905	161.190	161.475
160.335	160.635	160.920	161.205	161.490
160.350	160.650	160.935	161.220	161.505
160.365	160.665	160.950	161.235	161.520
160.380	160.680	160.965	161.250	161.535
160.395	160.695	160.980	161.265	161.550
160.410	160.710	160.995	161.280	161.565
160.425				

The above list was provided by Bob Grove, publisher of *MT*. Our next scheduled stop is ***Marietta, Georgia.*** Here are the frequencies for the CSX railroad.

160.590	Channel #3
161.100	Channel #4
161.370	Channel #1
161.520	Channel #2

According to Joe Pilgrim, the Norfolk Southern Railroad can also be monitored from Marietta, on the following: 160.255, 160.830, and 160.550. Thanks Joe, for inviting us to visit.

For our next stop, we'll need to throw a few shovels of coal into the boiler. We're heading North, to the state of ***Minnesota.*** James Schnoor lives in the area, and here are his favorite railroad frequencies:

Burlington Northern

160.290	St. Paul	MPLS & St. Paul Yards
160.365	Northtown Humptower	Engine Crews
160.410	MPLS 35th Ave Tower	Fridley Northern Yard
160.50	Signal Dept.	Railroad Police
160.59	Car Dept.	St. Paul
160.65	MPLS Yards	Dispatcher
160.71	St. Paul Yards	St. Paul—Piggyback Ramp
160.83	MPLS Engineering	

If you want Jim's complete, two page listing of railroad frequencies, it's yours for a #10 SASE. Send your request to the Frequency Exchange, P.O. Box 98, Brasstown, NC 28902 Requests that are postmarked after December 31 should include $2.00 dollars to cover copying and handling charges.

NEW PUBLICATION

MARITIME FREQUENCY DIRECTORY

LF - MF - HF - VHF - UHF

CW - FACSIMILE - FM - SITOR - SSB

THIS NEW PUBLICATION CONTAINS OVER 27,500 LISTINGS BY COMMUNITY AND INCLUDES NEW 1991 ITU FREQUENCY ALLOCATION CHANGES.

INCLUDED ARE GENERAL MONITORING INFORMATION, VHF FREQUENCY ALLOCATION CHARTS, COAST-SHIP FREQUENCY CROSS REFERENCE CHARTS, AND THE NEW 220 MHz MARINE FREQUENCIES.

Coverage Includes:

Coast Guard	Weather Broadcast
High Seas Radio Telephone	VHF Marine Operators
Public Coast Stations	Limited Coast Stations
Utility Coast Stations	Operational Fixed Stations
Commercial Stations	Recreational Stations
Search and Rescue	Emergency and Distress
Port Operations	Mississippi River
Maritime-Aeronautical	UHF Dockside Channels

New!

Friends Only

Incoming Call Screener

Is your telephone a source of unwanted solicitations, wrong numbers, obscene, or late-night intrusions?

Even unlisted numbers can't stop these annoying calls, but we can. Install **FRIENDS ONLY** between your phone and the jack, provide a three-digit code you have chosen to your selected list of callers, and you are protected from unwanted calls at the flip of a switch.

When the unit is enabled, a pleasant female voice asks the caller to enter your security code. If the caller doesn't have it, your phone won't ring.

FRIENDS ONLY comes with a bypass switch to allow all calls to ring, security code selector, message volume control, and AC adaptor.

Grove Enterprises'

www.americanradiohistory.com

Since it is getting close to Christmas, let's start heading toward my home state of Pennsylvania. As we pass through ***Cincinnati, Ohio***, let's stop to monitor a few frequencies that were sent in by Mark Meece.

160.260 Union RR
160.275 Conrail car inspectors
160.470 Conrail Channel #13 West Hump
160.485 Conrail Admin PBX
160.560 Conrail Police
160.680 Conrail Police
160.800 Conrail Channel #1
161.565 Conrail yard switching

Our last stop is my home town of Philadelphia. Here are the frequencies for ***Amtrack***.

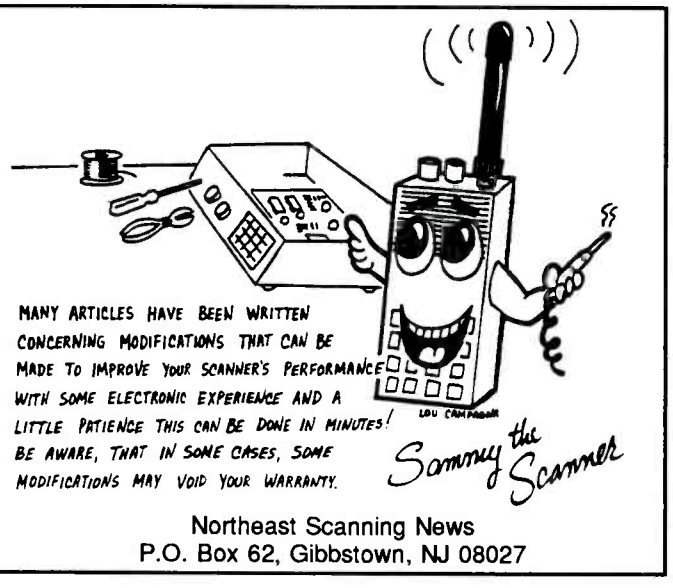
160.635 F-6 Maintenance
160.515 F-3 Maintenance
160.800 F-1 Road
161.070 F-2 Road
161.205 F-5 Police
161.295 F-4 Police
161.505 30th Street Yard
452.900 Station Admin

Inviting the Frequency Exchange to your home town is easy. Simply send a list of your favorite frequencies to the Frequency Exchange, P.O. Box 98, Brasstown, NC 28902.

Cordless Antenna

Did you know that winter is the time for building antennas? I know that sounds crazy, but that's what your letters indicate: the prime season for constructing antennas is during the colder months. If you've been thinking about building a scanning antenna, here's a neat, long wire cordless antenna, that can be constructed for pennies.

To determine the correct length for our antenna, we simply divide the frequency that we want to monitor into 468. The sum of the two is the correct antenna length required to operate on that frequency.



Dividing the cordless band of 46.0 into 468 gave me an antenna length of ten feet. I used copper braided wire from Radio Shack, and soldered the center feed from my coax directly to it. To the outside braid of the coax, I soldered a random length (about 15 feet) of the same copper wire.

A weatherproof housing for the soldered joints was provided by placing the exposed connections in a small, empty juice container, and then filling the same with auto body filler. After the filler hardened, (approximately 15 minutes) the plastic bottle was cut away to reveal an inexpensive antenna with a watertight connection.

The antenna's performance was excellent. On the cordless bands it outperformed my base antenna that is mounted above the surrounding tree tops. If you want additional information on this, and several other antennas that you can build, send an SASE to the Scanning Report, P.O. Box 98, Brasstown, NC 28902.

Cordless Scrambling

One of the hottest scanning bands can be found between 46.60 and 47.00 megahertz. As most of you know, that's the cordless phone band. But you probably didn't know that cordless monitoring has also caught the attention of cordless phone manufacturers. As a result, the "Phonemate" Corporation has begun to produce a digitalized cordless phone. The phone simply scrambles the air signal between the base and handset. Third party monitoring of the scrambled signal sounds like gibberish.

The cost of the new digital cordless phone is approximately $220.00 dollars. The new phones should be on the market for the Christmas holidays.

Bogus Traffic Reports

Have you monitored your local traffic reporting network? Here in Philadelphia, "Shadow Traffic" provides up to the minute traffic reports to local radio stations.

In Boston, Massachusetts, a traffic safety service allegedly monitored and rebroadcast the traffic reports of a rival agency. The agency being monitored radioed fake traffic reports between its road crews and main dispatcher. When the fake reports aired on the rival network, a law suit was filed.

Silencing Critter Control

A federal agent, using radio direction finding equipment, located an annoying radio signal that was blocking police calls. The agent arrested a 29 year old male living in a vacant garage. The man allegedly used a programmable hand held transmitter to harass Colorado Police.

According to the Federal Communications Commission in Denver, Colorado, the man broadcast under the name of "Critter Control." He would transmit cat calls, phantom responses, and would play taped recordings of police transmissions.

I don't know about you guys, but I'm a little confused. Why would a transient hide in a garage and use sophisticated equipment to jam police calls? There must be more to this story.

Next Month

A new year, new Treasure Hunt prizes and more scanning fun. See you in 1992!

RELM RH-256NB
HIGH BAND TWO-WAY RADIO

SPECIAL PACKAGE DEAL

$339.99

(Plus $9.00 Shipping Each)

16 channel digital readout two-way radio. Covers high band frequency range of 148-162 MHz without retuning. Perfect two-way radio for ambulance, police, fire, tow trucks, taxis, commercial companies who use this band. Features include CTCSS tones built-in, priority, 25 watts output, channel scanning, back lighted keyboard, message light, time out timer, scan delay, external speaker jack. Size is 2¾"Hx6½"Wx10¾"D.

SPECIAL PACKAGE DEAL includes RH-256NB, mobile microphone, ¼ wave body mount antenna, mobile mounting bracket and mobile power cord all for the low price of $339.99

UNIDEN BEARCAT BC-400XLT

$99.99

($7.00 shipping)

Our best selling mobile scanner. 16 channel. AC DC programmable, digital, AC DC cords telescopic antenna, mobile mounting bracket weather search, priority, 29-54 MHz, 136-174 MHz, 406-512 MHz, external speaker and antenna jack.

BEARCAT BC-100XLT
100 Channel Digital Programmable Hand-Held Scanner

$189.99

($7.00 shipping)

Our best price ever on a full featured complete package hand-held scanner. Manufactured by Uniden. Features include 11 bands of weather, aircraft, public service, trains, marine, plus more (29-54 MHz, 118-174 MHz, 406-512 MHz), 10 channel banks, 10 priority channels, lighted LCD display, earphone jack, channel lockout, AC/DC operation, scans 15 channels per second, track tuning. Special package deal includes following accessories: AC adapter/charger, rechargeable Ni-Cad battery pack, flexible rubber antenna, carry case.

SANGEAN ATS-803A
SHORT WAVE RECEIVER

$168.99

what's new?

Larry Miller

Realistic PRO-37

The lead story in "What's New" this issue once again belongs to Radio Shack and their new PRO-37. A real nice 200 channel handheld, it features Hyperscan (scans at the top speed of 25/second; searches at 50/second) and covers from 30 to 54 MHz, 108 to 174 MHz, 380 to 512, 806 to 823, 851 to 858 and 896 to 960 MHz.

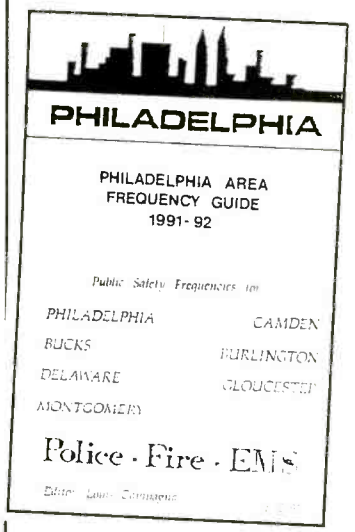
Retail price is $299.95. Bob Grove's hands-on review of the PRO-37 can be found on page 98 of this issue.

Scanner Battery Booster

Serious monitors who always have their handhelds handy sometimes complain that the radio's batteries quit before they do. An Illinois firm called MetroWest has designed a new product that extends listening for up to 40 hours beyond that provided by the scanner's own batteries.

The Booster Pack 3200 is an external, belt-hung unit that plugs into the recharge jack on the scanner via a coiled cord. The Booster Pack 3200 measures a mere 4-1/2 x 3-1/2 x 2" and is housed in a nice-looking soft nylon case. It weighs in at under two pounds and works with most 5 or 6 cell scanners.

The price is $59.00 plus $5.00 shipping. To get yours, contact MetroWest at 822 N. Spring, Dept. MT, LaGrange, Illinois 60525 or call 708-354-2124.



Philly Area Frequency Directory

Residents of the greater Philadelphia area, including Bucks, Delaware, Montgomery, Camden, Burlington and Gloucester counties, now have their own much-needed frequency directory. Produced by well-known monitor Louis Campagna (the man behind the "Sammy the Scanner" cartoons in *MT, National Scanning Report*, and *North East Scanning News*), the *Philadelphia Area Frequency Guide* covers police, fire, and EMS as well as local news media, marine, NOAA weather, transportation/Port Authority, PA State Police, air medical evacuation units and more.

Frequencies are indexed by county and are accompanied by maps indicating districts, zones and township locations. The compact, 40-page, 5-1/4 x 8-1/2" format is convenient for quick reference and great for travelers. There's even a section on PA and NJ scanner laws. Frequencies are indexed by county.

To get your copy of *Philadelphia Area Frequency Guide* send a check or money order for $12.95 (postpaid) to Louis Campagna, 8001 Castor Avenue, #143-L, Dept. MT, Philadelphia, PA 19152-2701.

Solar Radio

Here's an AM/FM radio that you can listen to and never have to worry about changing the batteries. It's solar-powered. During the day, the radio gets its juice from a small photovoltaic cell which also charges up the unit's NiCad battery. These same NiCads allow night time operation and, should the need arise, the unit can be charged through a DC jack.

The Solar Power Stereo Radio measures 2-3/8" x 3-1/2" x 3/4" thick and covers from 87.5 to 108 MHz (FM) and 525 to 1640 kHz (AM). You can get yours from KDK World Marketing, P.O. Box 931, Dept. MT, Upland, California 91785 for just $47.95 plus $2.00 shipping and handling.

Hooked on Code

Have you heard the radio ads for the tape, *Hooked on Phonics?* It's a series designed to help people learn to read by setting phonics to music. If the number of times a commercial is played over the air is any indicator, then by all indications, *Hooked on Phonics* is a smash hit.

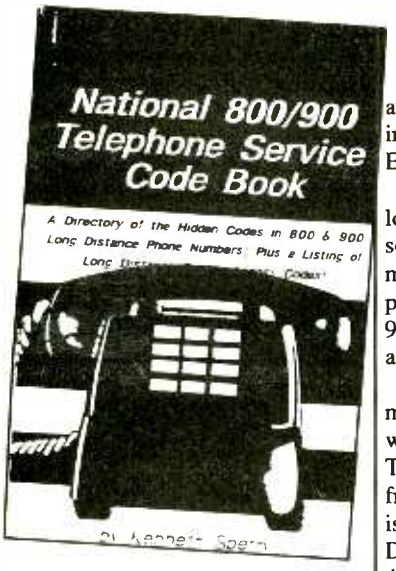
Phillip Kawa, a musician and new ham radio operator, has taken the same concept and put together a tape where Morse code is set to music. It's called (no, not "hooked on Morse") *The Rhythm of the Code*. Harry Baughn, an aspiring ham and husband of *Monitoring Times* editor Rachel Baughn, took the tape home and returned with the comments that "I think [Kawa] is on to something."

According to Harry, the author goes through the tape once with voice, then again without voice, then backwards with voice. The second side of the tape is identical. *The Rhythm of the Code* is available for $5.95 postpaid from KAWA Records, P.O. Box 319, Dept. MT, Weymouth, MA 02188.

National 800/900 Telephone Service Code Book

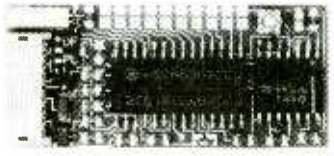
Did you know that the first three numbers following the "800" in toll-free and "900" toll phone numbers are actually hidden codes that identify the specific long-distance carrier handling the call?

www.americanradiohistory.com



In addition to these hidden codes, there are 3-digit Carrier Identification Codes (CICs) for directly accessing the telephone services and facilities of all long-distance carriers in the U.S., Canada and West Indies. These include many "private" CICs held by states, federal agencies, military switchboards, banks, data and computer services, emergency networks, credit card companies and so forth.

National 800/900 Telephone Service Code Book has all 1,600 of these hidden codes plus an explanation of 800 and 900 services and CICs. You can obtain a copy of this book from CRB Research, P.O. Box 56, Dept. MT, Commack, NY 11725. The price is $9.95 plus $3.50 shipping.



CTCSS Encoder/ Decoder

Communications Specialists has introduced a new CTCSS (Continuous Tone Coded Squelch System) encoder/decoder, the TS-64. The TS-64, at .78" x 1.7" x .25", is small enough to fit inside most handheld transceivers and scanners. The unit is jumper programmable to any of 64 sub-audible tone frequencies, including the 32 commonly used EIA tones.

Time-out timer, busy channel lockout, and reverse burst sending capability are programmable options in every unit. Low power consumption (6-20vdc @ 9ma) makes it ideal for handheld applications.

Installation is done via a microminiature plug and socket with color-coded wires attached. The TS-64 is priced at $64.95 from Communications Specialists, Inc., 426 W. Taft Avenue, Dept. MT, Orange, CA 92665-4296 or call 800-854-0547.

Bottle Brush Shakes Off Lightning

If you have antennas mounted on a tower, you know that you're a sitting duck during lightning season. If you're unlucky enough to get hit, your radio room, even with proper protection, can make your receiver look like it spent an hour in the microwave.

Say the folks at Electron Processing, "reducing the probability of a strike to your tower is a wise move." According to the manufacturer, the Lightning Reducer prevents the buildup of high cloud to tower voltages responsible for lightning strikes. Static charges are discharged into the air via hundreds of pointed discharge spikes before they can build up enough voltage to produce lightning.

In fact, says EP owner John Martin, "installation of an appropriate number" of his lightning reducers and proper grounding of your tower can lead to "an almost total elimination of the chance of lightning striking your tower." Each of his model LRU-1 Lightning Reducers has a six-inch discharge head mounted on a 12" long bracket with a U-bolt for mast mounting.

The LRU is priced at $40.00 for a "three pack," a normal configuration for towers ranging in height from 30 to 100 feet. For more information, contact Electron Processing at P.O. Box 68, Dept. MT, Cedar, MI 49621 or call 616-228-7020.

GUIDE TO UTILITY STATIONS 1992

10th edition • 534 pages • $ 48 or DEM 70

7500 new coastal and fixed station frequencies!

Our bestseller covers the complete frequency range between 0 and 30 MHz. We are the very first to publish ***all*** new maritime frequencies worldwide in use since the gigantic global frequency transfer in July 1991 - ***now*** and not five years later! Latest military and political events such as the impacts of the Gulf War and of the recent and current revolutions in Eastern Europe are covered exclusively by our UTILITY GUIDE. Sophisticated operating methods and regular overseas monitoring missions (1991 for months in India, Malaysia, Mauritius, Reunion, Rodrigues, Surinam and Venezuela) complete this unique book.

The completely revised new edition includes a frequency list with 19136 frequencies, and a call sign list with 3514 call signs. Up-to-date schedules of FAX meteo stations and RTTY press services are listed both alphabetically and chronologically. Abbreviations, addresses, codes, definitions, explanations, frequency band plans, international regulations, modulation types, NAVTEX schedules, Q and Z codes, station classes, telex codes, etc. - this reference book lists everything. Thus, it is the ideal addition to the World Radio TV Handbook for the "special" stations on SW!

Further publications available are ***Guide to Facsimile Stations***, ***Radioteletype Code Manual*** (11th ed.) and ***Air and Meteo Code Manual*** (new 12th ed.). We have published our international radio books for 23 years. They are in daily use with equipment manufacturers, monitoring services, radio amateurs, shortwave listeners and telecommunication administrations worldwide. Please ask for our free catalogue, including recommendations from all over the world. For recent *MT* book reviews see Jack Albert in 5/91 and Larry Van Hoorn in 9/91. All manuals are published in the handy 17 × 24 cm format, and of course written in English.

Do you want to get the ***total information*** immediately? For the special price of $ 165 / DEM 245 (you save $ 32 / DEM 40) you will receive all our manuals and supplements (altogether more than 1700 pages!) plus our ***Cassette Tape Recording of Modulation Types***.

Our prices **include airmail** postage to everywhere in the world. Payment can be by $ or DEM cheque or cash. Dealer inquiries welcome - discount rates on request. Please mail your order to ☺

U.S.S.R. Merchant Ship List

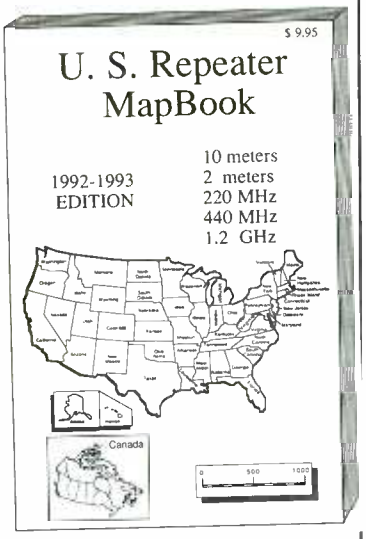
The Soviets have the largest merchant fleet in the world and their ships cruise every ocean. Monitoring the fleet, says Jason Berri, is "surprisingly easy" although it must be understood that Soviet maritime vessels transmit on shortwave in Morse code (CW), radioteletype (RTTY) and Telex (SITOR A or B).

For those who are interested in this fascinating aspect of radio monitoring, Universal Radio's *The U.S.S.R. Merchant Ship List* by Berri is a "must have." This is the 4th edition of *U.M.S.L.* and it covers some 1,110 active (meaning that the ship has been logged at least once in the last five years) Soviet merchant ships.

www.americanradiohistory.com

A description of ship transmissions is followed by ship lists arranged by call sign and ship name and cross-referenced by serial number.

The U.S.S.R. Merchant Ship List is available from Universal Radio, 1280 Aida Drive, Dept. MT, Reynoldsburg, Ohio 43068. You can order toll-free by calling 800-431-3939. The price is $10.95 plus $1.00 shipping.



U.S. Repeater Mapbook 1992-1993

If you've ever seen a copy of Dr. Bruce Elving's pioneering *FM Atlas*, then you've got an idea of how the *U.S. Repeater MapBook* is set up. The bulk of the book is arranged alphabetically, by state. Each state gets a two-page spread. On one side is a map of the United States showing the location of the state, a list of amateur radio stores in that state, the speed limit in that state, and the number of the local tourism authority.

On the other side of the page is a map of the state, some main highways and the location of various repeaters, indicated by their frequencies. Canadian provinces are treated in a similar manner.

This clever 144 page book also contains a log sheet, various tid-bits of information and 19 pages of ads. The *U.S. Repeater MapBook* (published by Artsci, Inc.) is available for $9.95 at your favorite ham radio store.

Canadian Military

Robert Ing has announced that the third edition of his book, *The Canadian Military Radio Frequency Guide*, has been published. According to the author, the book, which covers 50 kHz to 500 MHz, "lists and identifies frequencies currently in use by Canada's Military worldwide..."

Unfortunately, we did not have the opportunity to see a copy of the book itself and must rely on Mr. Ing's good reputation for our recommendation.

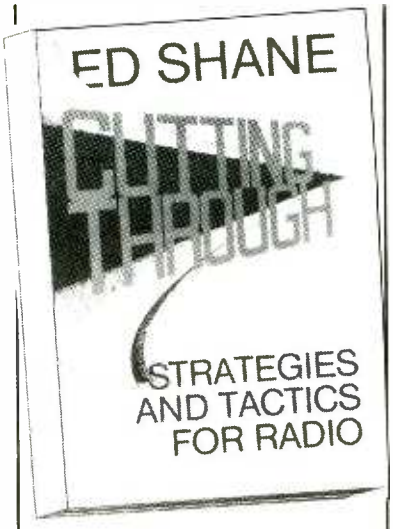
If you'd like more information on the book, write to Robert Ing, P.O. Box 378, Dept. MT, Postal Station O, Toronto, Ontario M4A 2N9.

Cutting Through Radio

Ed Shane's *Cutting Through: Strategies and Tactics for Radio* is a professional-level book that offers broadcasters "specific steps to cut through the clutter."

Mr. Shane describes the book in a brochure, extracting some of his own quotes. These include fundamental concepts like "The basic radio mission is `to make money.'" Shane poses evocative questions: "What would happen if listeners had to pay [to hear your station]?"

He makes scary predictions: "Radio's biggest ally will be



database marketing. Not just a list of addresses, but complete profiles of...listeners [including] buying habits, purchase potential, and psychographic values."

And he says puzzling things that sound like they were lifted from a bad translation of Chairman Mao's *Little Red Book*: "Finding a radio station is most often the same as adjusting a rheostat to soften the light. Once the adjustment is made, there's not much more to be done, including (as I take this analogy further) noticing what brand the light bulb is."

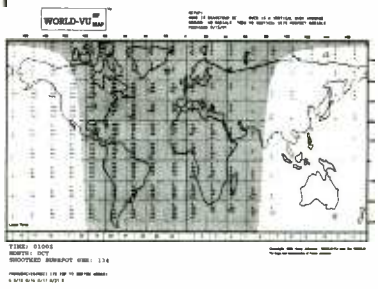
If you'd like more information on the book, you can write to Shane Media Services at 2500 Fondren, Suite 222, Dept. MT, Houston, Texas 77063, and ask for their brochure.

Cellular Violence

Tired of parking your car only to find that a group of young thugs, enraged by the apparent wealth that your cellular telephone represents, has viciously ripped the antenna from your Beemer?

It's a scenario that's being played out again and again in cities across America. Now comes relief from the aggravation in the form of an "inside-the-car" cellular antenna by Terk. The "CEO Inside Cellular Antenna" is a palm-size, square antenna that mounts to the inside of your rear window.

According to the manufacturers, the antenna is omnidirectional and actually works better than an outside-the-car antenna. To get yours, send $79.95 plus $7.95 shipping to Herrington, 3 Symmes Drive, Dept. MT, Londonderry, New Hampshire 03053 or call 800-622-5221.



World-Vu HF Propagation Maps

Harry Johnson has produced an innovative tool for the ultimate, competitive DXer. Forty five dollars brings a portfolio of 32 maps providing detailed seasonal predictions for 12 months at various seasons and times of the day for five frequencies.

There are even special event contest portfolios for specific periods at a cost of $30. An antenna comparison map set to tell you what to expect from your antennas is also available for $20.

The various map sets are custom printed for your location at a cost ranging from $20 to $45 per set. If you'd like a complete description and custom order form, write to World-Vu HF Map, P.O. Box 946, Dept. MT, Portsmouth, RI 02871.

Review

Grove FCC Database

For years the only way radio monitoring enthusuasts could get possession of the official FCC computer files of licensees was either by ordering the microfiche from Washington or by purchasing an expensive service from a contractor. Now, a low cost alternative for the home or business computer is available.

The Grove database is a proprietary format of the FCC's state index which may be sorted by city, frequency, agency or licensee. You can add your own files, edit those that are there, and delete what you don't want.

Services include public safety, mobile phones, experimental, private, cable, land mobile, industrial, business, land transportation, specialized mobile radio, aviation ground and marine coastal stations. And if you get too tired of seeing all those listings, hit Alt-F and bring up a calculator, notepad and even a puzzle!

As powerful as the program is, its down side is the disk space and time required for installation. If you live in a place like Rhode Island, no problem — only about 4 megabytes and 5-10 minutes. If you want to load California, Florida, or Texas, however, over 40 megabytes and an hour of installation time may be required! Not fun for those of us who have the patience of a drill sergeant.

But it's worth it. Once installed, you will find the Grove FCC Database program an invaluable aid for listening or even business radio planning.

To order send $59.95 for the first state and $49.95 each additional plus $2.50 shipping from Grove Enterprises, PO Box 98, Dept. MT, Brasstown, NC 28902-0098. Be sure to specify state, disk size, and density required.

"Friends Only" Incoming Call Screener

"Hi there. I'm with Whiney and Wimpy insurance. Are you fully covered? We have a plan just for you!..." [CLICK].

Everyone hates telephone solicitors. Even unlisted numbers can't stop these annoying calls. That is why KES Communications, Inc. has come out with the Friends Only phone security system.

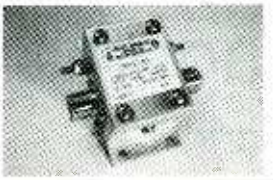
This innovative device makes sure that only the people you know can get through on your phone. It does this by asking every caller, in a friendly female voice, for a three-digit security code, easily changed by you at any time.

If the caller doesn't have the code, the system won't ring your phone. Great for screening out obscene calls, late night intrusions, wrong numbers and those interminable sales pitches!

The handsome and compact desktop unit includes a volume control for comfortable message level, security code selector, defeat switch and AC adaptor.

The **Friends Only** system is $89.95 plus $5 shipping from Grove Enterprises, PO Box 98, Dept. MT, Brasstown, NC 28902-0098. Phone orders can be placed at 800-438-8155.

IT'S NICE TO FOOL MOTHER NATURE!



Unlike any other lightning protection device for coaxial transmission lines, I.C.E.'s Model 300 series requires no predetermined voltage to develop between conductors before voltage suppression begins. Units are constant drain, capacitor-blocked, non-DC passive, and each relies on a heavy discharge inductor paralleled with a ceramic gas-discharge assembly to provide a lightning-fast trap system for induced voltages.

Virtually indestructible, 300 series arrestors are built in 1/8" thick standard chassis enclosures with dual stainless steel mounting/grounding screws.

Over a thousand satisfied customers have chosen from the numerous models & connector choices offered. Each is packed with mounting hardware, storage box, and 4-page owner's manual.

(PATENT APPLIED FOR.)

SPECIFICATIONS

Attack time	Zero to 10ns, depending on induced waveform.
Surge current	8/20 us., 20,000 amps
Operating Temp.	-65 to 125 Celsius
Discharge Inductor	Toroidal, insulated.
Back-EMF GDU	600-1000V, ceramic body construction, G.I. Clare
VSWR	Less than 1.1:1 over rated spectrum
Insertion loss	Less than .1db
Impedance	50-75 ohms
Hardware	18-8 stainless hardware 8-32 stainless steel ground lug, 1/8" thick 5032-H32 case, 6-32 mounting hardware
Finish	Natural aluminum
DC resistance across	47K to 250K ohms, resistive
Capacitive effects	Less than 1pf
GDU specs.	Meets REA PE-80 IEEE 587 CCITT K12
Environmental	Recommended for indoor service at input bulkhead to station's grounding system. May be used outdoors if protected from direct rain exposure.
Warranty	One year standard

"Uncle Skip" Arey, WB2GHA

Crisis Management for Monitors

The Shortwave World

Well, we come once again to December. Winter's chill is upon us. The DX is starting to roll in. Number One and Two Sons want every toy advertised on TV under the tree or they threaten to grow up to be outlaw bikers or insurance salesmen. Come to think of it, isn't it time to start kissing up to the Significant Other in a vain attempt to get a laser printer?

Remember tradition, Uncle Skip

Oh yeah, right you are Boss. December is when Old Uncle Skip is supposed to throw another log on the fire, strike a pensive pose, and wax philosophic about the DX tradition.

What a year it has been! We started out with a serious war and ended up with the dissolution of "The Evil Empire," leading to the formation of so many countries that the map makers are issuing monthly updates. Toss in the odd hurricane and typhoon along with the "Stand Down" of the Strategic Air Command (SAC) and you have got what may have been the most exciting year in monitoring history.

Looking back on my log book and reflecting on conversations at the annual Monitoring Times Convention remind me that radio monitoring gave us a special leg up on understanding these exciting events as they unfolded all around us in 1991. The events also led many new folks into the radio hobby. My mailbox was full of letters from beginners trying to come in on the middle of all this excitement. And there certainly was plenty to listen to, if the loggings in *MT* are any indicator.

While I can't guarantee that 1992 will pack as much radio excitement into one year, you don't have to be Nostradamus to know that there is going to be some excitement somewhere on the globe. Radio monitoring will again serve to give each of us insight into our wild and wonderful world.

The key for all listeners, especially beginners, is learning to listen smart: Learn to track a crisis. So pour the Wassail, top the tree and come out from under the mistletoe for a few minutes as I present a present to you...

UNCLE SKIP'S GUIDE TO CRISIS MANAGEMENT

You will find that radio will provide exciting listening through essentially three routes: the

unexpected, the educated guess, and the announced. Some gems drop in your lap unexpectedly during regular listening. For example, tuning across familiar territory one evening in 1978, I found somber music playing on Vatican Radio when there should have been a regularly scheduled news program. This shift in programming signaled the passing of Pope Paul VI.

On the other hand, you can reasonably expect interesting monitoring from the world's hot spots. The January 1975 armored assault across the 17th parallel into South Vietnam led many radio hobbyists to monitor South East Asian radio services to track the eventual fall of Saigon in April of that same year. Similar world trends allowed folks to tune into the collapse of the regimes in countries such as Uganda, Iran and Haiti. Needless to say, the Middle East got a good listening during Operation Desert Storm and the restructuring of Eastern Europe is opening many exciting radio monitoring opportunities even as you read this article.

Another less frequent but equally fruitful path is something announced. During the British battle with Argentina over the Falkland/Malvinas Islands in 1982, the world was treated to "Argentine Annie" who broadcast Tokyo Rose type propaganda broadcasts to British troops as they steamed toward the conflict. History points out that the Brits dug the music but ignored the rhetoric. Many news services reported this event thereby guiding listeners to this historical series of broadcasts.

All these examples point to the simple fact that "YA GOTTA PLAY TO WIN!" There are three words that lead to success in this hobby LISTEN, LISTEN, LISTEN and DOCUMENT, DOCUMENT, DOCUMENT. Did I say three? Make that six.

Training

You don't have to wait for a crisis to strike to get your crisis management skills in order. Your routine listening and DXing serves to prepare you in the same manner that an athlete trains for an event or a soldier trains for war. The more listening and documenting you do, the better you are going to get at listening and documenting. The real key to listening to a world event "as it happens" is having a good working knowledge of all the radio bands and all the radio services.

This knowledge will lead you down less traveled paths of listening that might not be important while monitoring the Annual Boot Polish Production Statistics on Radio Freedonia. But when Freedonia's leader is finally caught in a scandal with the lady he met at the opera one night and Freedonian Freedom Fighters attempt a coup, wider radio knowledge will guide your listening to the clandestine Freedonian Liberation Front program coming out of the mountains in neighboring Klutzistan.

Get the picture? Know the bands and any world event will become your monitoring playground. So put on your jogging suit, don your sneakers and hit those dials. Train up to improve your listening.

Knowledge is Power

And don't forget RESEARCH, RESEARCH, and MORE RESEARCH! (Is that nine or ten words now? Nevermind.) Get to know the world around you so you can figure out when excitement might strike.

Follow the press! Radio, TV and newspapers are all sources of the basics on world events. Everything from the headlines and lead stories to the weather report can give the dedicated monitor fodder for frequency following. If you weren't locked onto the Cable News Network (CNN) during Operation Desert Storm you were either living in a cave or, worse yet, living in a cave that did not have cable or a satellite dish. When a crisis happens, things start to move fast. One eye on the Boob Tube while tuning the dials is *de rigueur* in the modern world of crisis monitoring.

www.americanradiohistory.com

Don't forget the added information available to you as a radio hobbyist! The world news services of the many international shortwave broadcasters can give you information that even CNN might have missed. Regularly scheduled DX and Radio Hobby programs can even give you up to the minute frequency information for currently important world events. The "Shortwave Guide" in the pages of *MT* will point you in the right direction.

Maps

An important form of research is the study of LOCATIONS, LOCATIONS, LOCA...(*Stop that!!!*) Find the best maps and atlases (atlae?) that you can. This can get expensive, so don't forget your public library. Study the layout around your crisis area extra carefully. Get to know the bordering countries and, of course, their radio services.

In the case of the present changes in Eastern Europe and what can now best be called the USSR et al., stay alert. Does that new Republic have an old Radio Moscow relay transmitter in its back forty? You might be the first to log a new station. This is a real possibility with today's fast changing cartography.

Check Frequencies Frequently

Part of that "training up" listening and all that research and documentation stuff will include getting to know frequencies that will provide fruitful listening. I am always amazed by folks who can reel off a list of a few dozen frequencies without so much as a sidelong glance. I don't think I could keep my kid's birthdays straight if I didn't own a calendar.

For us folks without a filebox in our heads, monitoring hobby publishers have provided excellent frequency resources for almost every occasion. Obvious choices such as *Passport To Worldband Radio*, the *World Radio TV Handbook*, and the Grove *Shortwave Directory* are books that eventually find their way onto most listener's shelves. If you peruse the catalogs of many of the advertisers found within the pages of *MT*, you will come to discover that there are dozens of books that outline frequencies for all types of listening.

If your budget is tight, start out with one good resource for shortwave broadcast and a second that covers utility station frequencies. The reason for this is that the two forms of listening, SWBC and UTE, are essential for full coverage of most crisis situations. The broadcast stations are going to give you the news and commentary; but the utility frequencies will point you (often literally) to the "Front Line" listening opportunities. Even in this world of scrambling and encoding, some military communications are out there waiting to be monitored in the clear.

Making a List and Checking it Twice

If you are in a situation where a crisis is unfolding, a few short lists of frequencies will help anticipate further events. Let's look again at the Freedonia fiasco. Your list will include Radio Freedonia, the services of surrounding countries such as The World Service of The Empire of Klutzistan, the previously mentioned clandestine and several major world broadcasters. These might all be known to you from your general listening and following of events, frequency lists on DX programs and, of course, the pages of *MT*. Now how do we build upon this short list?

First we check the maps and our shortwave broadcast frequency guide, and we discover that the island nation of Nibi Nibi, to the South of Freedonia, also has a powerful shortwave broadcast service. We then look at our utility frequency guide to get the likely frequencies for Freedonian military operations. We might also discover that there are United States military forces based on Nibi Nibi. Monitoring the US frequencies may give an idea of their state of alert and readiness.

A quick glance at the world weather report in the evening newspaper indicates that Hurricane Irving is scheduled to hit the island of Nibi Nibi and move up the Freedonian coastline, further complicating matters at hand. Again, the utility frequency guide might supply you with places to listen to hurricane trackers and possible relief agencies after the storm.

Commentary on several major shortwave stations indicate that the destabilization in Freedonia could affect exports of lampwicks to The Federal Republic of Dunkenfield. Adding Dunkenfield's shortwave service to your list now becomes essential for full understanding of the crisis as it unfolds.

And, of course, who could forget amateur radio? With communications breaking down due to coup and storm, hams are likely to be supplying links with the outside world through various emergency service nets and individual contacts. Now you have generated quite a list of frequencies to keep you busy through the crisis.

When the crisis has passsed, save your frequency list. Areas that are in various sorts of trouble are often in trouble more than once. That old list on file will speed up operations in the future. Also, don't forget to share your frequencies and findings with your fellow DXers through the pages of *MT*.

We all wish for a safer and more sane world in 1992. But if events move in a more troublesome direction, good listening skills will find you at the head of the pack when it comes to understanding the world around you.

Scanner folks, have no fear! Next month we will take a look at how to cover those crises that occur closer to home.

Tone and Code Finder

Pricing
Tone Only . $189.95
Tone & Dig. . $299.95
Tone w/Mem. . $239.95
Tone & Digital w/Memory . $339.95

The Tone/Code Finder is composed of a high speed display unit mounted to a scanning receiver. Its purpose is to instantly find and display all CTCSS and DIGITAL codes, including split channel and inverted codes.
On board memory retains all hit and time information which is then transferred to a printer via a RS 232 port upon command. Time is stored in seconds and hits in units. In the event of power loss, the FINDER will maintain memory for up to three weeks.

Filter Modules
455 kHz IF
- Improve the selectivity of your receiver
- Various bandwidths are available specifically designed for the shortwave enthusiast : from 2.8 kHz to 6 kHz (-6 dB bandwidth)
- Special input and output amplifiers eliminate the need to match the filter to the receiver's circuitry
- Excellent shape factors and zero insertion loss
- Miniature shielded coax for all signal connections
- Self-adhesive velcro allows placement anywhere within the receiver's enclosure
- Easy to install - Complete instructions are included

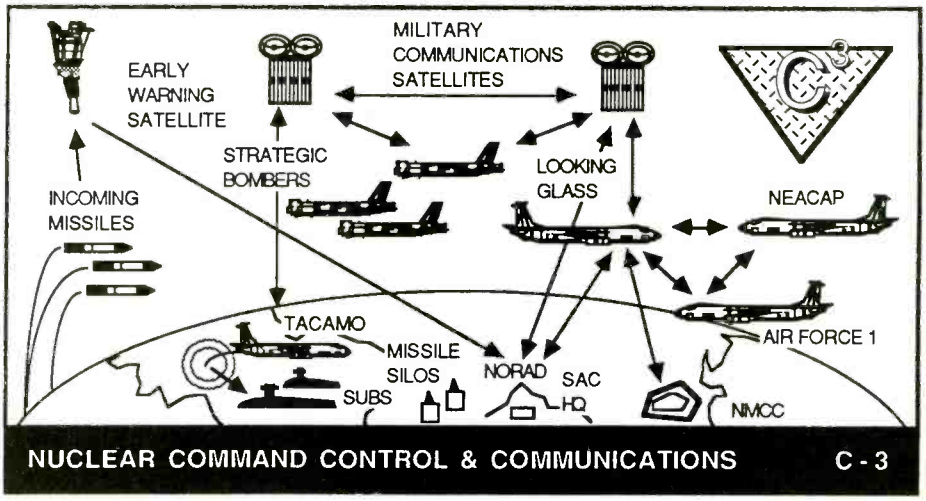
In the Event of a Strike

Great changes have taken place in the world's strategic arms posture since we were last together. B-52 bombers that have stood on alert for the last 40 years sit idle, their engines turned off. Whole classifications of nuclear missiles have been slated for the scrap yard. Aircrews who practically lived in bunkers in close proximity to their B-1B bombers, now spend their alert duty in the comfort of their homes. It seems the world has finally had the sense to pull back a step from the brink of nuclear destruction.

Many military monitors, including yours truly, wondered what effects the changes would have on the military airwaves. So far, it seems little if any change has taken place. Listening in on the HF and UHF bands, one can still hear the booming EAMs (Emergency Action Messages) familiar to all military monitors. The military bands are still buzzing with activity. Exercises, trans-oceanic deployments to the Middle East, and aerial refueling missions are keeping the frequencies hopping with activity. The only difference seems to be that the activity is shifting from nuclear to conventional war preparedness.



MILITARY UHF SATELLITE FREQUENCIES

Frequency	Satellite mode
248.900	MARISAT (NBFM)
260.475	FLTSATCOM (WBFM)

Nuclear Command Part 2

Although it may seem that the world is dismantling its nuclear arms, it remains clear that we will continue to live in a world that has to deal with the threat of nuclear war. Unfortunately, we can't un-invent the bomb, and as long as nations disagree and have at their control weapons of mass destruction, there will be those who command and control them.

Last month we took a look at how the U.S. nuclear chain of command works. We examined who has control of the nuclear button. This month we will look at the high tech satellite networks that provide the reins of command.

The View From Above

In the event of an attack on the U.S. or its allies, satellites will play a key role in getting the warning out and issuing the command to strike. The first word of an impending attack would come from early warning satellites such as the U.S. DSP (Defense Support Program) early warning satellites. DSP senses the tell-tale heat signatures of missile launches.

DSP was recently used to detect the launchings of SCUD missiles against Saudi Arabia and Israel during the Persian Gulf War, giving Patriot missiles time to react. DSP satellites radio missile launch warnings to SAC/NORAD command centers via SHF (3-25 GHz) and EHF (25-300 GHz) frequencies. Sometimes the DSP satellites have been fooled by space rocket launches, volcanic activity, and large forest fires. If the attack is confirmed as real, then commands scramble bombers via telephone, HF, VHF, UHF, and EHF radio. The modes used to get the bombers off the ground are voice, teletype and encrypted data.

The bulk of military satellite traffic is handled by the Air Force's AFSATCOM and the Navy's FLTSATCOM orbiting birds. Both types are nuclear hardened against the electromagnetic pulse effects (EMP) that follow nuclear detonations, as are the ground and air-based terminals that control them. AFSATCOM and FLTSATCOM operate on the UHF bands and many monitors listen in. (See Table 1 for a list of frequencies.)

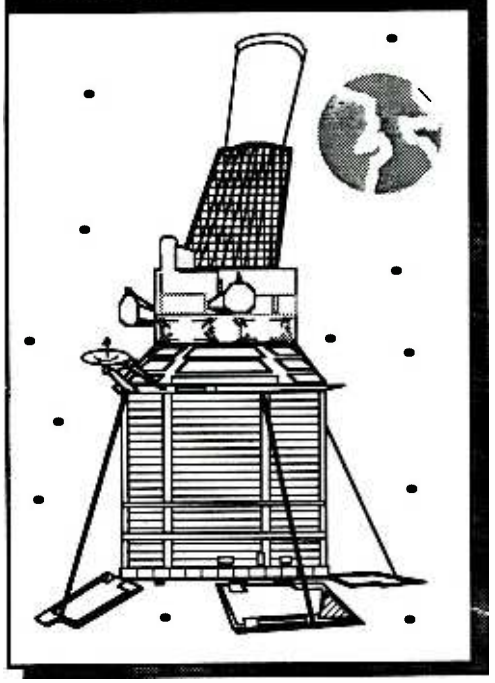
Other military satellites would be pressed into service as well, such as DSCSII and DSCSIII (Defense Satellite Communications System). DSCS satellites were pressed into service during Desert Storm when tactical communications overwhelmed FLTSATCOM and AFSATCOM terminals. DSCS carries a special single-channel transponder for relaying Emergency Action Messages. It receives the nuclear go-codes on either SHF or UHF, then rebroadcasts them to all AFSATCOM terminals. DSCS satellites use the SHF band for communications.

Alerting the Submarines

The Navy would get the attack word out via FLTSATCOM or by VLF (Very Low Frequency) radio. It is rumored that Navy has satellites and aircraft that communicate via blue-green laser. Blue-green laser can penetrate the ocean depths and is an ideal, secure way to communicate with deep diving subs without risking their exposure. Navy go-codes to subs could be routed from land-based command centers via lasers aimed at satellite/mirrors in geosynchronous orbit. The space mirror reflects the lasers down to nuclear submarines on patrol.

www.americanradiohistory.com

DSP EARLY WARNING SATELLITE



VLF radio also penetrates oceans but the frequencies used require massive power. Natural and manmade interference on VLF can be heavy at times, and using VLF has many drawbacks. Because of interference on VLF, messages have to be repeated over and over again to ensure a good copy. Land based Navy TACAMO aircraft also broadcast messages to subs via VLF, but the method is dangerous and not very reliable. The TACAMO planes deploy a two-mile long trailing wire antenna behind them. Accidents from the antenna back-lashing and wrapping around the plane have been reported.

Sending coded data by VLF transmissions is also very slow. To send the letters "ABC," one would have to send "AAAAAAAAAA . . . , BBBBBBBBBB . . . , CCCCCCCCC . . . ," etc, to ensure a good copy. In the event of nuclear war, time is of the essence, so VLF would not work well. To broadcast a simple message might take hours.

According to Pentagon sources, most VLF messages are the same. The Navy broadcasts a "We are still here and all right" message, that lets subs know that peace prevails. If the messages stop, then submarines either launch an attack after a set period of time without any contact or surface to get orders via satellite, VLF or TACAMO-based laser.

Next month we will conclude our look at the Chain of Command by examining what happens after the go-codes are sent.

MAILBAG

It seems that the anonymous letter containing strange goings on out at McCarran Airport in Las Vegas, Nevada, struck a few cords among Fed File readers. According to the letter, mysterious airliners (callsign Janet) are being flown out of the airport on secret missions. Last month, *MT* contributing writer Steve Douglass reported that Janets may be used to ferry TR-3A Black Manta spyplane pilots and technicians to their secret base in west-central Nevada. Since then other opinions and observations have come to the Federal File's attention.

A letter sent in by another anonymous writer states the Janets are used by the Department of Energy to fly employees to Groom Lake, Nevada (top secret USAF test area 51). The letter says that Department of Energy (DOE) employees are transported in buses, with blacked-out windows, to an area 10 miles south of Groom Lake, adjacent to Papoose (dry) Lake in Emigrant Valley.

What goes on there is not disclosed but rumors have been circulating for years about a mysterious hypersonic spyplane called Aurora based in the vicinity of Groom Lake. The Auroras are said to be flying out of Watertown Strip just south of Groom Lake.

Another Federal File reader, Joseph Cejka, says he thinks the aircraft at McCarran are used by NEST (Nuclear Emergency Search Teams). NEST has been active lately in the Persian Gulf.

Joseph says if you check the flight plans of the Janets, you will find out the destinations are Albuquerque, New Mexico, home of Sandia National Laboratories; Los Alamos, New Mexico, nuclear weapons and Star Wars development; Amarillo, Texas, Pantex nuclear weapons assembly plant; and Oak Ridge, Tennessee, nuclear research and weapons manufacture.

If this is the case, it looks like the Janets are being used for DOE work, more than NEST work. Not many people know what really goes on inside of NEST, but it seems they wouldn't need to visit these nuclear installations on a regular basis. Steve Douglass, who lives near the Pantex plant in Amarillo and monitors the area airwaves religiously, has never heard the callsign Janet used in conjunction with DOE flights.

DOE flights into Amarillo use commercial call signs such as WEST AIR 1129. Steve says most Pantex/DOE flights are military transports, either C-141s or C-5B Galaxies. However, Steve does relate one instance when a commercial 727 with no markings arrived at Amarillo International Airport and parked at the designated DOE pad. The aircraft was immediately surrounded by armed security forces. Many people wearing coveralls with DOE inscribed on back boarded a Pantex bus.

Steve went on to say, the fierce-looking security police armed with automatic weapons guarded and helped unload many mysterious-looking crates, all bearing "danger, radioactive" stickers. Checking the flight plan, Steve noted that the aircraft listed as its place of origin, McCarran Airport, Las Vegas.

Whatever the mystery 727s are used for, they seem to have made for some exciting monitoring. If anyone else out there has any information on the subject, please send it on to the Federal File.

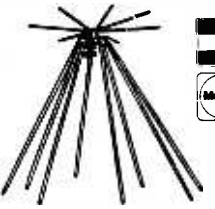
DISCONE 100% MADE IN USA

SCANNER ANTENNA

ONLY $29.00



- Receives all AM-FM & SSB frequencies.
- Gain improves with frequency increase.
- Mounts to any vertical mast 1" to 1½".
- Aluminum mount & elements.
- 8 cone & 8 disk elements—same as other discones selling for nearly 3 times our price
- Accepts standard PL-259 connector.

Order Direct From

Jean Baker, KIN9DD

DELTA Bound

Delta radio operator and communications equipment.

Welcome aboard. Can you believe it's December already? I enjoyed meeting everyone who attended the convention this year and know it was a good learning experience and enjoyable interlude for all of us.

Continuing with our look at airlines and their air/ground communications, come along with us to Delta Air Line's corporate offices in Atlanta, Georgia. We'll visit the radio communications room and talk with 24-year veteran employee George Ketner, supervisor of radio operations. Our visit to Delta's company headquarters in Atlanta was arranged by Dean Breest, coordinator of public relations.

Before 1956, Delta's air/ground radio communications system was staffed by radio operators located at all of the stations (airports) that Delta served. In 1956, however, the company started making up radio networks consisting of several stations on a communications link of frequencies, closing down all of the remote stations and moving the whole operation to Atlanta. By 1964, the move was complete.

Today, there are 88 radio sites distributed around the United States, making up 13 networks connected by landlines (telephones) and microwave. The radio room equipment is comprised of Collins receivers/transmitters with some Wulfsberg units also in use.

Presently, there is a total of 17 radio operators who staff Delta's a/g communications center, providing service to their pilots 24 hours a day, 365 days a year.

"One of the most important skills for a new operator to have is the ability to type 45 words per minute at the very minimum. The ultimate goal is to be able to work up to 75 or 80 words per minute," George Ketner told *MT*.

LDOC Station Frequencies

Long Distance Operational Control used by Delta as well as many other airlines worldwide:

Dragon Air Radio, Communications Center, Hong Kong: 3007, 6637, 8921, 13330, 17940, 21970.

Berne (pronounced Bern-a) Radio, Communications Center, Berne, Switzerland: 4654, 6643, 7605, 8936, 9211, 10069, 13205, 17931, 18023, 18480

Speedbird Radio, Communications Center, London, England: 5535, 8921, 10072, 13333

ARINC LDOC Frequencies, Communications Center, New York, N.Y.; San Francisco, Calif.; Honolulu, Hi.: 3013, 3494, 6640, 11342, 13330, 13348, 17940, 17925, 21964

It was easy to see why this is necessary as I watched and listened to the operators. Their fingers flew over the console keyboards as they handled call-ups from Delta's pilots on flights nationwide. George added that usually new operators weren't required to have previous technical training, but experience with aeradio and/or other radio operations was preferred. Most of the older operators who've been with Delta for a while have a second class radio/telephone license because it was mandatory until a few years ago.

When asked about the number of contacts the radio room handled, he checked through a logbook and said, "We've had as many as 42,000 a/g contacts a month. The heaviest time periods for call-ups seem to be during the afternoon and evening shifts, between 2 and 11 p.m." George related, "Good weather usually means less contacts. Bad weather increases them. If we have bad weather at one of our hub stations, communications can get very heavy. If there are storms at two hubs, things get even busier."

We asked what were the most common requests received by the operators from Delta pilots. Without hesitation, George said, "Here again, weather plays a major role. We receive a lot of queries and reports regarding conditions both en route and for destinations. The rest of the time it's a mixed bag of maintenance reports, miscellaneous requests, Selcal (Selective Calling) checks, etc. As an example, occasionally a pilot will report an inflight passenger emergency requiring a diversion of that flight into the nearest station where the passenger is off-loaded for medical attention."

Routine in-flight reports, such as OOOI (Out, Off, On, In) reports are usually transmitted by ACARS (data link) unless the unit is inoperative. Then they're relayed by the pilot.

Since Delta's communications center only handles VHF transmissions, overseas flights, such as to Hawaii, Europe and Asia are worked by ARINC on their HF LDOC frequencies, as well as Berne Radio, Speedbird Radio and Hong Kong's Dragon Radio (see insert for frequencies). Transmission reports are relayed back to Atlanta.

One final question concerned what the immediate future held for Delta's radio network. George Katner grinned and said, "New state-of-the-art equipment. We're in the process of changing over to a new type of "touch-screen" console, which will replace the turret equipment we have now. Everything will be on one screen with touch menus. It should be much more efficient than our present equipment and we're looking forward to their installation."

We thank George Ketner and Dean Breest for their time and for the tour of Delta's Radio Communications Center. It certainly made for a fascinating day in Atlanta.

Monitoring Navaids

Laura Quarantiello, California, contributed the following "Primer On Where To Listen For Aeronautical Aids To Navigation."

Nondirectional Radio Beacons (NDB):

190-535 kHz. Used to determine bearing and to "home" on a station. Transmits a continuous three-letter VHF ID.

Omni-directional Range (VOR):

108.0-117.95 MHz—subject to line-of-sight restrictions. Most are equipped for voice transmissions, but all transmit Morse code identification which is indicated by the word "VOR" following the range's name (*i.e. "Shelbyville VOR"-jb*)

Distance Measuring Equipment (DME):

962-1213 MHz—Distance information—reliable to 199 nautical miles at line-of-sight altitude, Morse code ID. (*There's that Morse again. Even knowing a little Morse can be of assistance in the darndest places.-jb*)

Instrument Landing System (ILS):

108.10-111.95 MHz—Forty assigned channels within this frequency range are used to align the pilot with course guidance to the runway centerline. Localizer transmitter (*providing the pilot with horizontal course guidance-jb*) IDs in Morse with an "I" followed by a three-letter identification.

www.americanradiohistory.com

Glide Slope/Glide Path:
329.15-335.0 MHz—Provides descent information for navigation on the ILS approach.

ILS Marker Beacons:
Used to give pilots Morse code and visual indications on flight deck instruments.

Compass Locator:
190-535 kHz—Operate at less than 25 watts, though some are used as outer marker compass locators and transmit at 400 watts. These generally carry Transcribed Weather Broadcast (TWEB) information. Compass locators transmit continuous two-letter ID groups.

Thanks, Laura. We'll look at some more of these in our February column.

Readers' Corner

• Does anyone have VHF company station frequencies for Virgin Air and Northeast Airlines, especially in the northeastern part of the country? Jim C. from New Hampshire, as well as several other folks who have written to me from that area, would like to know what they are.

• Chris T., an air traffic controller and *MT* subscriber, contributed the following aviation comms funnies:

One overcast day at Los Angeles International the following exchange took place between a pilot who was on final approach and a controller in the TRACON (Terminal Radar Approach Control):

Controller: "Uh, FriendshipAir three-three-three, say altitude please."
Pause
Controller: "FriendshipAir three-three-three, say altitude."
Silence
Controller: "FriendshipAir three-three-three, I say again, say altitude."
Friendship Air three-three-three: "Al-ti-tude."
Controller: "Good, FriendshipAir three-three-three, now can you say vi-o-la-tion?"

United Airlines is based in a Chicago suburb and because of the airline's vast number of flights in and out of O'Hare daily, other airlines have accused the controllers of giving United priority in just about everything. Chris swears the following story is true.

A United 727 and a Delta L-1011 had just been handed off from Chicago ARTCC and were ready to contact O'Hare Approach Control one day, when suddenly the Delta aircraft developed a major problem and the captain started to call Approach Control saying "O'Hare Approach Control, this is Delta 440. We've developed a major hydraulic failure on both systems and are declaring an emergency."

Simultaneously the United 727 pilot said, "Hello, Approach. This is United 23 with you. We're at 9,000 feet with information (on the ATIS) India."

The controller, sorting out the two voices, calmly said "Standby, Delta; go ahead, United."

Late at night, when air traffic is not as heavy as it is during the day's peak periods, controllers and pilots tend to loosen up a bit. This can act as a tension reliever for all concerned.

"Seattle Center, (calling) FaginAir 212."
"FaginAir 212, (to) Seattle Center, go ahead, sir."
Seattle Center: "FaginAir 212, say your present position."
"FaginAir 212, (to) Seattle Center, I'm seated, sir."
Seattle Center: "Thank you very much, FaginAir 212."

An aborted takeoff is anything but funny. However, this story is.

A Treetop Airlines flight was just about to attain flying speed departing Miami International when the aircraft, a, shall we say, "elderly" BAC 1-11, abruptly slowed down. Smoke poured out from its tires as the plane made a finally successful stop before rolling off the runway.

As the 1-11 turned onto the nearest taxiway and headed back to its gate, the tower controller anxiously asked if emergency equipment, or any other assistance was required. "Nope." said the first officer. "The captain just forgot to lock his seat in place and when we applied full power he was holding the wheel and his seat slid all the way back."

Company Frequencies

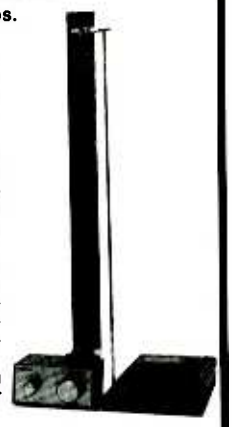
We promised to publish airline company frequencies when ever feasible, so here are several in use at Indianapolis International Airport:

USAIR	130.100
American Airlines	129.225
TWA	130.225
Continental	129.925
American Trans Air	131.525
Northwest	131.9
ComAir	130.5
United	129.975

That's it for this month. Next time, we'll have more aviation software reviews (there's a blue billion of them out there), navaid definitions, and other goodies. Have a warm and joyous holiday season. Until then, 73 and out.

CHANNEL CLEANER™

• New reception principle.
• Reduce interference 15-30 dB.
• For small portable radios.



Bugged by interference? Two stations on one frequency and you can't understand either one? Splatter? Heterodynes?
Channel Cleaner™ solves these problems. Simply place your radio on Channel Cleaner's platform. Tune **Channel Cleaner™** and rotate it to null out the interference.
Channel Cleaner™ makes a directional radio frequency shadow that shades your radio's antenna from the interference. Reception in all other directions is normal.
Experience this exciting new development. Order your **Channel Cleaner™** today.

Model PA-420 Channel Cleaner™ $79.95 + $4 shipping/handling in U.S. & Canada. California residents add sales tax.

Send for FREE catalog that shows our complete line of antennas, preamplifiers, and filters.

The Station with No License

The United States Military Academy has a very specific image: Clean cut young men and women, stiff as a two-by-four, carrying flags and marching in formation. Rifles, perched on their shoulders, gleam in the bright sun.

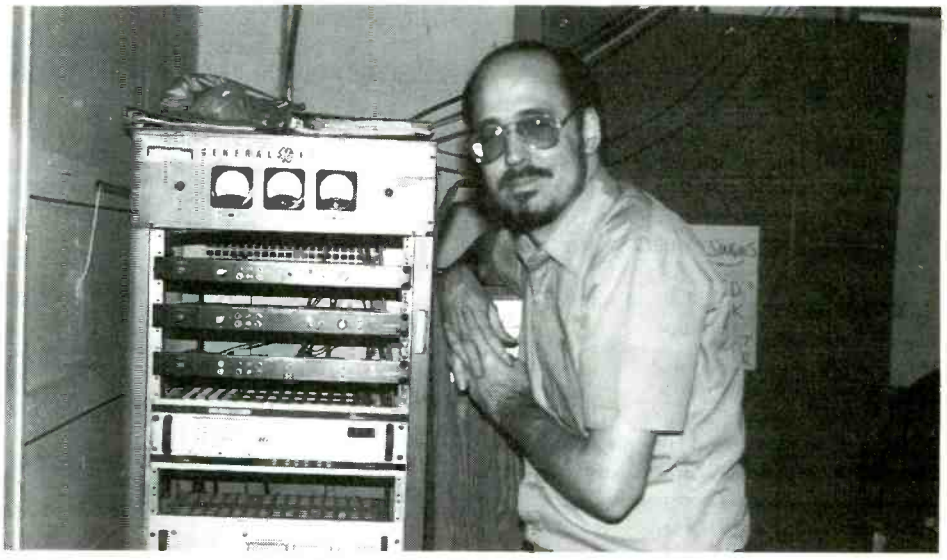
It's an image well-cultivated at West Point. The people who make up the 4400-member student body of West Point are, in fact, the *creme de la creme*. They are a deliberate cross section of the entire country. Two come from every Congressional District in the country. Others are Presidential appointments.

But these future leaders, the officers and gentlemen of the U.S. military, are also very much teenagers — perhaps a little more conservative than most but teens nonetheless. If you doubt for a moment, listen to WKDT, the student-run campus radio station.

"WKDT is designed to serve this institution, this student body, only," says Joe Cyr, the general manager of the station. "The fact that people outside of West Point can hear us is nice but if we lost you, it's not a problem."

It's not likely that many people outside of West Point will hear the station. It's located just north of Bear Mountain National State Park and is surrounded by rocky palisades that naturally limit the station's 100 watt signal. When a new station, WLPJ, came on the air recently, it made a further dent in the station's coverage, limiting 'KDT to a radius of about five miles.

"So long as we don't lose the five main buildings here and the homes of West Point, we're OK," says Cyr. "We've been going merrily along since 1972."



Station manager Joe Cyr with WKDT's 100 watt transmitter.

'KDT goes perhaps a little merrier than most broadcast stations in the United States. It has no license. "We have an `understanding' between the DOD [Department of Defense] and the FCC," says one station official.

Competition is not one of the station's big problems, either. There are no TVs allowed in cadets' rooms. Seniors and juniors are allowed in the company game room to watch television. Yearlings (sophomores) can watch TV on weekends. Freshmen, however, are never allowed to watch television anywhere.

Radio is on strict rations, too, albeit for a different reason. Very few stations penetrate the campus — just two, to be exact, and one of them is a beautiful music station. As a result, the station bills itself, somewhat humorously, as "The Only Alternative."

WKDT is, quite literally, the only alternative for some students. When the freshman class arrives at West Point in July, they are not allowed to have a radio until the following January. As a result, many plebes are drawn to participate in WKDT as their only access to music. Those who stick with WKDT through their years at "The Point" come away with a solid grounding in the principles of radio.

"In February or March of your senior year," says Cyr, "you draw the branch that you are going to serve in the military: artillery, armor, infantry, signal corp. A couple of weeks after that, you draw your post assignment -- Germany, Korea — then you go. But most will never touch the radio again."

Won't we hear these young broadcasters someday as the voices behind Armed Forces Radio? "No," says Cyr, "that's for enlisted people. These young men and women are officers when they come out. They could, of course, end up in a supervisory or administrative position."

"But that's why I get such a charge out of this job," says the station GM. "These guys aren't working at 'KDT because they want to land a job in radio after they leave here. They're doing because it's fun. And it sounds like it."

Cadets at WKDT.

Breaking the Rules

Even though Halloween is long over, people are still asking Steven Humphries about "magic formulas." Humphries is no conjuror, though. He's vice president and general manager of KXTN/KZVE in San Antonio, Texas. During the last couple of months, Humphries has been able to do something, well, almost magical.

His KXTN has become the top-rated Spanish-language radio station in the city, knocking KCOR from its traditional spot. How has he done it? KXTN breaks one of the major rules of Spanish-language broadcasting — the disc jockeys don't speak in Spanish.

Targeting the "partially assimilated Hispanic," Humphries features only Tejano music, which is a blending of Anglo and Mexican-American cultures. Speaking of his audience, the San Antonio native says that "Culturally and emotionally, [the target audience uses] Spanish as the language of emotion. But they gain a good deal of their news and information needs in English and Spanish." All music played on the station is in Spanish.

Calling Their Buff

Doing a radio show "in the nude" has become something of a cliche. It's easily accomplished while fully clothed. All that's necessary is the right words and radio's "theatre of the mind" does the rest.

In Brisbane, Australia, B105's morning duo of Jamie Dunn and Ian Skippen also claimed to be doing their show in the nude. But when photographers for the "Down Under" version of *People* magazine showed up to call their bluff, they got an X-rated eyeful. And so did the rest of Australia when the magazine published the pictures. There, in a two-page spread, are the two jocks, wearing only what God gave them on their birthday.

Not all station employees were amused, though. Said DJ Skippen, "Some of the more prudish members of the staff decided to turn the heating off to make a point." The two responded by clothing themselves in station bumper stickers, putting them on — you guessed it — their bumpers.

Station Grants

Here's what's new on the air near you. Hartselle, AL 106.1; Trussville, AL 105.9; Warner Robins, GA 102.5; Zebulon, GA 92.5; Champaign, IL 100.3; Norris City, IL 90.1; Olney, IL 90.3; Russell Springs, KY 92.7; Ocean Springs, MS 92.5; Blue Mountain Lake, NY 89.9; Port Matilda, PA 107.9 and Greer, SC 103.3.

For Sale

Isn't it about time you bought yourself that radio station you've always been wanting? After all, it is Christmas and you *do* owe it to yourself...

How about a 25,000 watt FM in the Coastal Carolinas? It's a single station city with 6.6 million visitors annually. By fall, sales were already ahead of last year by more than 36 percent. Asking price is $850,000. Call 919-355-0327 and ask for Tom Snowden.

There's a 50,000 watt full-time AM in Huntsville, Alabama, that's on the block. M.D. Smith is asking $175,000 for the facility. If it sounds interesting, call 205-533-3131 during business hours.

In "deep, sunny, southeast Georgia," lives an AM/FM combo that comes with 11 acres of real estate plus studios and offices. The AM is full-time at 1,000 watts; the FM is 3,000 watts but upgradable to 6,000. All you need is $80,000 and the willingness to assume a $315,000 note over the next 14 years. For more info, call Rob Williams at 919-633-9799.

British DX Club

The 1991 edition of *Radio Stations in the United Kingdom* has just been released by the British DX Club. The booklet lists all British medium wave (AM) and FM stations in frequency order — both BBC and independent — including their location and transmitter power. Each frequency is cross referenced to show possible parallel channels.

You can get your copy for US $4.00 postpaid (check or money order) from the British DX Club, 54 Birkhall Rd, Catford, London, England SE6 1TE.

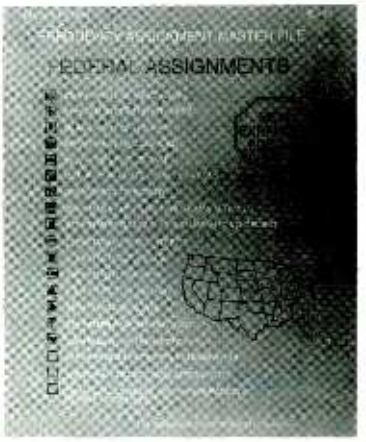
Frequency Assignment Master File

by The Communications Research Counsel



224 controversial pages provide the most comprehensive look at federal government frequencies in print.

Well over 100 federal agencies, from the Central Intelligence Agency to the National Security Agency, from the FBI to the Border Patrol, are listed. And the book isn't just for scanner listeners; shortwave frequencies are listed as well, including the Mystic Star network.

Alphabetized by department and agency and their locations, then listed in frequency order.

Peering Into the Future

Poised on the eve of the new year, it's a good time to assess the current status of the satellite industry and speculate about the future.

Among the 25 or so C and Ku band satellites, there are over 150 active video channels, several hundred FM audio subcarriers and hundreds more SCPC (single channel per carrier) channels of additional audio. To add to that there are several one-of-a-kind services such as Electra, X*Press X*Change and Digital Music Express offering unique satellite-delivered information and entertainment.

In the Beginning

The mission of the cable TV industry in the beginning was a simple one: Bring distant over-the-air television signals to areas which had no television reception. This mission remained intact for nearly 20 years. With the launch of the first satellite-delivered, intended-for-cable pay TV service in 1975 (Time Inc.'s Home Box Office) a new era in cable began.

This also signaled the beginning of the satellite television industry. Each year new, more sophisticated satellites were launched. The broadcast industry awakened to the concept of using these satellites to distribute their signals to affiliates, telephone companies were using them for long distance lines, industry and commerce were finding them very useful for transmission of data without the use of expensive land lines. The more these "workhorses in the sky" were looked at, the more uses were found for them.

Cable is becoming a dinosaur, It's time satellites cut the cord... if only they could!

Cutting the Cord

The time is rapidly approaching when the rationale for utilizing a wire physically strung through city streets, buildings and rooms, becomes irrational. Like the great tail-finned, heavyweight, gas-guzzling cars of the '50s, cable is a dinosaur. It is meant for an era before satellites.

Albeit with much hesitation, the concept of DBS (Direct Broadcast Satellite) service is inevitably lurching its way into our future. DBS is generally depicted as high powered (over 100 watts) Ku band satellites which deliver their signal to small 18 to 24 inch dishes.

The first such attempt was made in the mid-'80s by a company named USCI which leased a Canadian Ku bird, retrained the spot beam on the Eastern U.S. and fed five existing cable channels. These signals were picked up on a three-foot one-piece fiberglass off-set fed, unsteerable single polarity dish. The plan called for Radio Shack to market the hardware and USCI to market the programming. It was a financial disaster.

The reason for the flop was simple: At a time before scrambling, 10 times the number of channels offered by USCI on Ku for a monthly fee were available on C band for free. Rule number one: Don't charge people for something they can get elsewhere for free.

Cutting the Cord: Take Two

The next effort at DBS came just two years ago with a very different twist. Taking advantage of the entrenchment of scrambling, TVN (formerly TouchTone Video Network) launched a C band DBS service aimed primarily at the existing home dish market. Discarding cable programming which is already available to the market, TVN has concentrated its efforts on the Impulse Pay-Per-View (PPV) market. The theory is that people in the home dish market will be eager to pay each time they want to watch a movie.

TVN is not exactly a prairie fire but it helps that AT&T, which owns the Telstar bird on which TVN is located, is also a major part of its financial configuration. Rule number 2: have a backer with deep pockets.

At the same time that TVN was hatching its plan, no fewer than 11 other companies and organizations were putting forward schemes to mine the thus-far mythical gold mine of DBS. Out of all those candidates only two entities actually made it to the satellite.

Cutting the Cord: Take Three

The two horses still limping to the finish line are SkyPix and PrimeStar, but it's not clear which, if either, will win. Each service is taking a different approach. SkyPix is trying its 8 to 1 digital compression transmission approach to the market while PrimeStar is beginning with the old analog one channel at a time method. Both will have to overcome the same handicap in a very sluggish economy. Rule number 3: Don't launch a multi-million dollar business venture at a time when the whole economy is flat on its back.

To indicate the state of confusion these two are in, PrimeStar had originally planned to launch this year with 50 to 100,000 subscribers. A report in MultiChannel news from September '91 indicates they will be closer to 7,000. In addition, PrimeStar may end up abandoning its analog transmissions for an as yet undeveloped digital compression system. Meanwhile SkyPix is said to be having trouble finding financial partners and has yet to announce an official launch date.

As of this writing SkyPix has one video compression channel on SBS 6 (99 degrees west) in operation while PrimeStar has 11 BMAC encrypted channels on GE's K1 (85 degrees west).

But Wait, There's More

Still lurking around the launch pad are the real DBS players. These are the high-powered Ku band satellites that really will make the 18-inch dish a reality. Unfortunately, they are a long time from take-off. This leaves us right back were we started.

But what's the future for C band? It turns out that it is quite good. Also hanging around the launch pad are a new generation of C-band birds nearly twice as powerful as the ones we are currently viewing. These satellites, once launched, will likely have a life-span of 12 years making it possible that your current C-band equipment investment will be good until 2014.

www.americanradiohistory.com

A Question of Degree

Within the next six months the FCC will likely have ruled on the question of spacing in the sky. For years there were so few satellites with such distances between them that spacing was not a concern. Five years ago it was the commission's intention to leave only two degrees between satellites as seen from the earth. This spacing would allow extra satellites to be squeezed in.

However, the rapid expansion of the home dish market and the desire of dish manufacturers to reduce the size of the backyard dish has created a conflict with the two degree spacing scheme. With higher powered C-band satellites a smaller 4 or 5 foot C-band dish could be used.

The smaller dishes would obviously expand the market. The problem, however, is that positioning these more powerful satellites so close together would make it hard for the receiver to tune in the proper satellite. Without the extra degree between them, the dish would "see" both.

Understandably, the home satellite industry is very much interested in the commission's reviewing the spacing policy. However, the satellite industry, which is composed of heavyweights such as Hughes, GE, Ford, etc. do not care to see the change. More space between birds means fewer birds. Given the advantage of weight, reach, height and money, it will be a surprise if the FCC goes to the three degree spacing.

Notes from the MT Convention

In my annual informal poll of those attending the seminar on satellites I noted a dramatic increase not only in attendance but in the number of those who said they had home satellite systems and those who intended to get them.

Many informal but earnest conversations took place during the rest of the convention to exchange information and ideas about monitoring satellites.

Among the satellite luminaries were Tom Harrington, author of *The Hidden Signals On Satellite TV*, Donald Dickerson, Satellite View editor for *Popular Communications*, and a surprising number of satellite enthusiasts who have been monitoring the Clarke Belt since the late `70s. Numerous stories of intrigue and savvy hamfest shopping were told. One of the best tips was for those who have Electra teletext decoders or Infocipher 1500R data receivers to scan each channel on each satellite in search of heretofore undiscovered data transmissions. You may be surprised at what you find.

One of the more interesting stories was from James Latham, station manager for Radio For Peace International in Costa Rica. According to James, a communications network for educational institutions in such far flung places as Rarotonga, Hawaii, Alaska, and Costa Rica, to name a few, was set up years ago under U.S. government auspices and managed by NASA. Utilizing a voice-only geosynchronous satellite launched in 1963 (and by this time wobbling a good bit), the network made for reliable daily communications among the institutions.

Uplinks used seven-element Yagi antennas powered by 150 watt transceivers. Transmissions were split using frequencies just above and below the two-meter ham band. While it has been a year or more since he last checked into the net, James speculated that it was still active. If any *MT* readers have more on this or other lesser known satellite nets, I'd appreciate hearing from you. One wonders what other kinds of low-technology opportunities are possibly being missed by not utilizing all of our "space junk."

MAILBAG

• Zack Schindler, Ferndale, Mich., writes that others who are cable TV subscribers might be able to convince their local cable company to carry the NASA Select channel (F2,13). The channel features daily programming in four-hour blocks repeated every four hours. Zack notes that the material "consists of educational and historical NASA material."

He suggests writing, not phoning, the local cable company's manager or programming director with information from NASA Select, Public Affairs Office, NASA Headquarters, Washington, D.C. 20546, Phone: 202-453-8425. He also suggests emphasizing the educational aspects of the service.

• Clarke Rennie, Los Angeles, writes: "The signal on SBS 2 fades in and out and disappears completely at times. Is SBS 2 in an elliptical orbit rather than a geosynchronous orbit?"

Clark, according to the Westsat Communications Satellite Channel Chart, COMSAT SBS 2 (Ku 97 degrees west) is an "inclined orbit satellite." This means the satellite, while still in a geosynchronous orbit, has difficulty staying there. The result is that it drifts in and out of its allocated position.

An excellent article on the subject is entitled "Tracking Eccentric Orbits" by Mark Long and is in the August issue of *TVRO Dealer*. There is a chance that back copies exist. Write Tech Editor Karl Finke at Fortuna Communications Corp., 140 South Fortuna Blvd., Fortuna, Calif., 95540 or call 707-725-1185. A subscription to *TVRO Dealer* is well worth the $12 a year fee.

Ike Kerschner, N3IK

Going Lower

Wow, here it is December, time for ho ho ho, snow and DXing on the low bands.

To be sure there is still plenty of DX to be worked on the bands above 40 meters, but the long winter nights and low noise levels allow us to work DX on our three lowest ham bands (160, 80 and 40 meters) with greater ease. What a thrill it is to chat with a fellow ham half a world away on 80 or 160 meters! In general I have found operators on the lower bands to be more willing to chat and spend some time getting to know you. The competition factor is not as strong among low banders, maybe due to the fact that operators on the lower bands are rag chewers, more accustomed to friendly chatting.

Why is Winter Better?

Low band DX is normally limited by two factors, the first is daylight, the second is atmospheric noise as generated by electrical storms.

During the daylight hours, a heavily ionized layer called the D layer (nearest to the surface of the earth) absorbs signals in the 160, 80 and 40 meter bands; generally, limiting daytime communications to just a few hundred miles.

The D layer forms shortly after sunrise and dissipates rapidly as the sun sets. Low band signals follow this path between sunrise and sunset giving rise to the famous "gray line DX" phenomena. The gray line is the terminator of the earth, that point where sunrise meets sunset as the earth rotates on its axis. Consequently, it is, at times, possible for stations located on the terminator to be able to communicate with great ease. Normally conditions are optimal from about one half hour before and after sunset or sunrise on 160 and 80 meters and perhaps up to an hour before and after on 40 meters.

As you might expect, stations common to your grayline will vary from day to day. Several computer programs are available that will generate a list of areas of the world common to your gray line; one of the most popular is called the DX EDGE, and is available from ham dealers. The ARRL (225 Main St., Newington CT 06111) also has an excellent low band DX plotting program configured for a wide variety of computers.

Is that the Only Time?

Not at all; most quiet winter nights will see DX to many parts of the earth on these bands, and communications to the antipodes (the points directly across the globe from you) is possible anytime after sunset. Expect communications from the eastern US to Europe and Africa anytime after sunset, and possibly to any other place on earth in the same hemisphere, when night time is common to both points.

What About Sunspots?

During periods of high solar flux (sunspots), DX on the higher bands is better because the ionosphere is more densely ionized and the shorter wavelengths are easier to refract back to earth. When solar flux numbers are low, the low bands still refract easily back to earth because their longer wavelengths impact (if you will) a greater amount of ionization while the shorter wavelengths pass through the ionosphere and are not returned to earth.

What this all means is that very often during periods of low solar activity 80 meters will rival 20 meters as the DX band!

Noise!

The most limiting factor to DXing on the low bands is atmospheric noise as generated by electrical storms. Of course any electrical noise (yes, I know all about mom's hair dryer, mixer and sewing machine) can mask weak DX signals.

Summer time is without doubt the most difficult time to work DX on the low bands. To be sure the signals are there, but noise hides them most of the time. As a result, the best time to work stations in the opposite hemisphere is during the early spring and fall of the year just as seasons change and electrical storms are not as frequent in either hemisphere.

Where Do I Find DX?

In CW on the 80 and 40 meter bands, DX is normally found on the lower 35 kHz of the band; 160 meters is a different story. There are several DX windows depending on the area of the world you are looking for. It is best to check the band and talk to the various ops to see where a particular country or group of countries hang out looking for DX QSO's.

SSB DX on 75 meters can crop up anywhere, but will usually be found between 3700 and 3800, 40 meter ops check the lowest edges of the phone band. Due to the fact that different parts of the world are assigned different frequencies on all of the low bands, it is a good idea to pick up a copy of ON4UN's book *Low Band DXing;* the book is available from most ham dealers and the ARRL Book Store.

What About Power and Antennas?

An average 100 watt rig attached to a good vertical antenna will do the job most of the time. No, the antenna does not need to be vertical; many ops work the world with low horizontal dipoles or long wires. Don't let lack of acres of antennas keep you from getting on and having fun! Try it; you'll be sure to like it.

Remember the Ham Hubble?

In the October column I discussed the possibilities of putting a telescope in an OSCAR. Well AMSAT was ahead of me on this one, and at this time Oscar 22 is sending photos back to earth. To date, there appear to be only photos of Earth, but perhaps in the future the bird will look at other objects in space.

So far, there has been little fan fare on this bird, perhaps because it is still in the testing stages. France also has a small telescope in space; more on this as details become available.

New Ham Organization/Magazine

The National Amateur Radio Association, 16541 Redmond Way, Suite 232 Redmond, WA 98052 is publishing a magazine called COMMUNICATOR. The organization's stated objective is to encourage more people to become involved in amateur radio. The one issue of the magazine I have seen is not too bad.

Most of the staff are well known names in ham radio: for example, Don Stoner, W6TNS, Fred Maia, W5YI and Gordon West, WB6NOA.

One article, "All about Frequency," introduces the newcomer to the concept of frequency. Still another informs the reader about the history

www.americanradiohistory.com

Rob Sarduis

Ham DX Tips

You say you've asked Santa for a chance to log some of the rare ones? Well, he got your letter, and here's some tips that might help:

BOTSWANA Here's some DX for you codeless technician class licensees! A22BW is looking for packet contacts via the satellites! Since most of these frequencies are 2 meter ones, or 432 MHz, this is a great way for newly licensed codeless techs to make a DX contact, especially if your local packet node is linked to a satellite or to a node that is. If you contact A22BW, you may QSL to his QSL manager: Wolfgang Daub, Solinger 79, D4018 Langenfeld, Germany.

CANADA Licensed hams can check into and SWLs should check out the nightly get together of the Ontario DX Assn. with their club station VE3ODX as net control station on 3740 kHz starting at 0230 UTC. If you log VE3ODX, you may send your report to Box 717, Station Q, Toronto 7, Ontario, M4T 2N5. Many of the members on the net discuss their latest DX catches, which include SWBC stations!

DX NET INFO The 40 meter DX net moved from 7159 kHz nightly at 0600 to 7179 kHz to avoid SWBC QRM.

FRANZ JOSEPH LAND 4K2MAL is the new station active from here on: 21020 kHz at 2330 UTC, 10103 to 10105 kHz at 0030 UTC, 7005-710 kHz at 0130 UTC. QSL UA4RC Victor Gorokhow, Box 252, 423400 Almetevsk, USSR.

HONG KONG Active till after first week of December GU4XGG/VS6 using the freqs of: 14210, 2120, 28570 kHz. QSL route will be advised during the operation.
LAOS XW8KPL has been on 21270 kHz at at 1530 UTC daily. QSL route is now: Phuthong, B.P. 3770, Vientiane, Laos.

MALAWI 7Q7BX (Christine Shaw) has been showing up on 14227 kHz in the Pacific DX net that operates here as early as 1000 UTC till 1300 UTC. Her husband Paul, 7Q7BW, has been on 28555 kHz at 1700 UTC. QSL both to: P.O. Box 30667, Llongue 3, Malawi. Be sure to include return postage.

MIDWAY KH4AE (Arthur H. Edmonds, P.O. Box 19 NAF, FPO San Francisco, CA 96614) is a newly licensed technician, that is one with HF privileges, and keeps regular schedules on: CW 21150 to 21200 MHz Fridays at 0330 UTC and 28300-28500 kHz SSB starting at 0000 UTC daily.

NEPAL Father Morgan, 9N1MM, has been appearing rather regularly on 14247 kHz at 0030 UTC nightly. QSL to N7EB, his QSL manager, Edward M. Blaszcyk, 12802 Sun Valley Dr., Sun City, AZ 85351.

Well, that's it for another month. Have a Merry Christmas and remember while DXing is fun, I hope that you'll take some time to be with those who are close to you, family and friends, during this time period; and may Santa bring you that new receiver you wanted!

73 de Rob

of amateur radio regulation. And a fictional offering, "Dan and Burke," harks back to the 1950's Popular Electronics Carl and Jerry stories (a series of stories about two teenagers who use electronics/ham radio to solve all sorts of problems).

My only objection to the magazine is an editorial that bangs away at the faults in our educational system and does not offer reasonable solutions; at least nothing that came through to this reader.

The magazine is aimed at the beginner and those interested in getting folks involved in ham radio. At a cost of ten bucks a year, it is worth giving it a try.

The FCC

... has recently announced a notice of proposed rule making which will allow amateurs to conduct a limited amount of personal business on the air. "At last I can order pizza via the autopatch!"

didahdidahdit

Hope you all have a happy and joyous holiday season

FIND OUT TO HEAR WHAT YOU'VE BEEN MISSING OUT ON!

Our new catalog contains information on many exciting new products to help you hear more action, such as these:
• MINI-BOOSTER: A shortwave ACTIVE ANTENNA amplifier module that installs INSIDE your radio! Makes your radio's telescoping antenna pick up signals like a 50 to 100 foot longwire antennal Easy, no-solder installation into any Realistic DX-440 or Sangean ATS-803. Assembled/tested: $34.95.

• FM WIRELESS SPEAKER RELAY: lets you listen to the superior reception of your base SW receiver or scanner through any FM radio up to 1/10 mile away! Auto shut-off. 75% assembled semi-kit: $37.95.
• ACTION TAPE CONTROLLER: Scanner-to-tape recorder patch that activates your recorder only while your scanner is picking up some action. Plugs into scanner speaker jack. Condense an entire night's scanning into minutes! Assembled/tested: $29.95.

• WIRE STRETCHER, SW TAPE PATCH, TOOLS, other products.
To order, send check or M.O. and add $4 shipping per order. To get our latest catalog, call us or send a 29 cent stamp to:
Worldcom Technology P.O. Box 3364
Ft Pierce, FL 34948 (407) 466-4640

QSL DESIGNS for SWL, CB, Ham
We produce a personalized, ready-to-print design on quality 60 lb. bond. Simply take it to your local printer for the quantity, color, and stock of your choice. A super value!
— send SASE for our free samples —
QSL Prints

outer limits

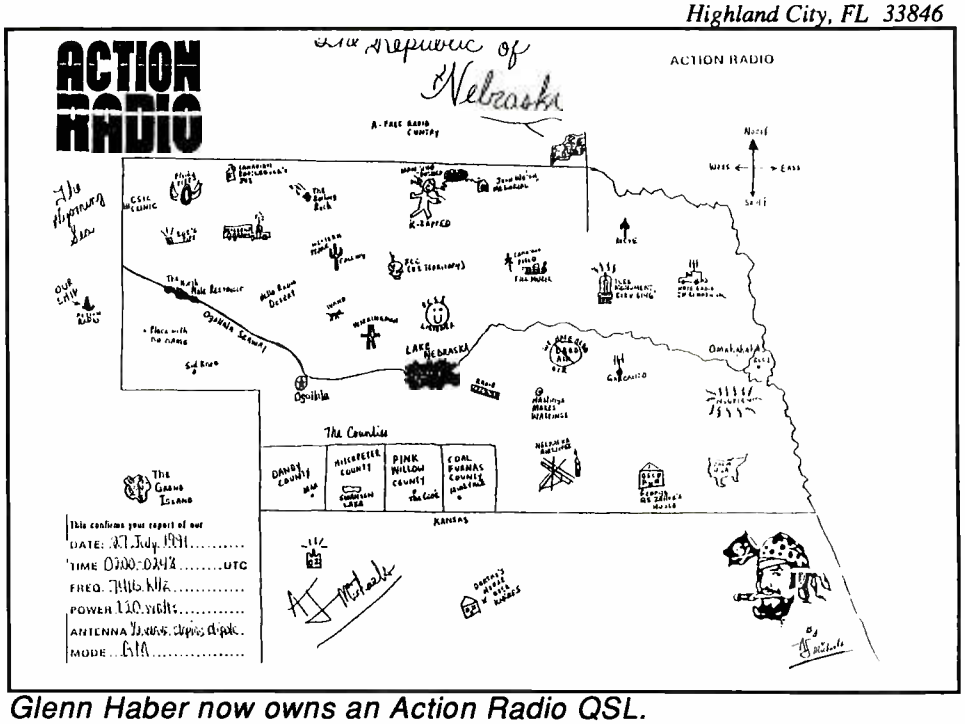
Dr. John Santosuosso

P.O. Box 1116
Highland City, FL 33846

Here Comes Radio Tower: This editor was pleasantly surprised recently to receive a phone call from Paul Peters of the Dutch pirate Radio Tower. Paul said to tell all "Outer Limits" readers Radio Tower will definitely be broadcasting again to North America this DX season.

The station received such a huge number of replies for their transmissions last spring that they are going to remain on the highly successful frequency of 15050 in upper sideband. Most likely time to hear them, based on the previous broadcasts, is probably UTC Sundays between 0100 and 0500. If you have never heard a Europirate, this is an excellent opportunity to grab that first one. All broadcasts are in English.

Radio Tower is a good verifier. I would suggest sending either a dollar or several IRCs for return postage. Reports can be sent to the station in care of P.O. Box 19074, 3501 DB Utrecht, The Netherlands. By the way, Gregg Allinson: Paul says he has been trying unsuccessfully to contact you.



Glenn Haber now owns an Action Radio QSL.

Radio Harmony might be another Euro catch. In Florida Terry Krueger reports hearing this one frequently after 0100 on 6304.94. The station appears to be relatively new and features music from the 1940s through 1960s. Most likely, transmissions originate in Ireland, but this is not certain.

You can send your reception report to Radio Harmony quite easily. They have a USA post office box. Enclose a dollar for return postage and send that report to Box 7, Venus, TX 76084.

• Glenn Waber, who usually sends us reports on the pirate activity he hears in Wisconsin, writes this time to tell us what he discovered on a recent trip to Ireland. Radio Fax (6205 and 12255) was in daily. Radio Fax on one occasion announced that Radio Stella International was transmitting from UTC Saturday 2300 to 1015 Sunday on both 6291 and 7446. Undoubtedly Stella is a lot easier to log in Ireland, but this is another Irish pirate that with some persistence you can grab on this side of the Atlantic as well.

Some Help From the BeeB: The BBC Monitoring Service always does a super job of keeping us up to date on the changing clandestine situation. They note the Colombian clandestine Radio Patria Libre, operated by the Camilist Union Army of National Liberation, has turned up on the new frequency of 4695 at 0035. The station continues to announce a schedule of 0030 and 1130 on a frequency of 6300 kHz.

Meanwhile clandestine Radio of the Republic of Iraq, the Voice of the Iraqi Opposition, has added an additional transmission in addition to the one starting at 1100 UTC. The BBC has monitored it on 17950, 15600, and 9570 from 0256 to 0519 UTC. The station is believed to be a CIA operation transmitting from both Egypt and Saudi Arabia.

Your editor came across another Iraqi clandestine. This one, the Voice of the Mojahed, is sponsored by the Iraqi government and directed against Iran. It was engaging a losing battle with a bubble jammer on 4740 at 0140. The station also uses 6540 and according to the BBC has also been found on 6130 and 7120 as well as medium wave.

• A really fantastic reference work for those interested in clandestine radio is *The CCN File*. It is a complete set of all issues of the "Clandestine Confidential" newsletter from 1984 to the present. The "File" comes in a handy three-ring binder and is $25 plus $2 shipping and handling from Tiare Publications, Box 493, Lake Geneva, WI 53147. It should definitely help you bag those fascinating and sometimes elusive clandestines.

Let's Open the Mailbag: "Outer Limits" readers have been hearing quite a lot these days.

• Loyal contributor Skip Harwood once again tells us what he is monitoring out in California. **Voice of Free America** had a USB signal on 7415 at 0300. **Radio Animal** was hosting a show on **Alliance for Free Radio's** 7415 transmission at 0320.

• Glenn Waber does all right on the road and at home. From his Wisconsin post he found among others **Radio USA** at 0206 on 7414 with a mail bag show. The Canadian pirate **Radio Beaver** made it south of the border on 7415 USB at 0133. Radio Beaver noted CBC had broadcast an item about the station. **Voice of Gilligan** showed up on 7415 at 0405 in LSB and mentioned most of the folks in the old "Gilligan's Island" TV series.

Glenn also did superbly in the QSL department. Cards arrived from **Action Radio, Revolutionary Voice of Plainville, Tube Radio** and **Radio USA**.

• Once again we are pleased to hear from William Schmitz in Washington D.C. He found **Radio Cowabunga** on 7415 at 0211 in a QSO with **Radio USA. Radio DC**, "Your alternative voice from the Beltway," showed up at 2310 on 7415. **WGNK, Radio Free New England,** also made an appearance on 7415 at 2320. Finally, **WNOT** took over 7415 on one occasion at 0023. In the QSL department, William got a nice blue logo card from **Radio Tower.**

New Zealand: Bob Thomas says to be on the watch for test transmissions to North America from New Zealand pirate Radio Kiwi. Try 5850 from 0600 to 0730 UTC. Reports go to Free Radio South Pacific, Box 1437, Hastings, New Zealand.

The Grim Reaper: It seems almost every month we hear of several closings. This month is no exception. Gary McGee sent us a report from the *Miami Herald*. Fun Radio in Hialeah got a visit from the FCC. It had been operating on 91.7 and its 50-year-old operator played everything from polkas to Russian army

www.americanradiohistory.com

William Schmitz QSLed WKND.

marches. Fun Radio only ran a quarter of a watt, but that did not deter the FCC from silencing it.

• Andy Lange provided us with another report from the Odessa, Texas, *American*. Two West Odessa FM pirates, KROX on 95.1 and KFRE on 107.7, got quite a few visitors. They included agents from the U.S. Marshals' Service, U.S. Border Patrol, Odessa Police Department, and the Ector County sheriff's department. Both are now silent.

And Some Final Words: Our congratulations to Kristin Kaye and Christopher King for their outstanding new show "Signals." If you haven't come across this yet, be sure to tune in WWCR at 0435 UTC on 7435. It's the perfect show for "radio junkies" and covers virtually all aspects of the listening hobby, including pirates. You can also catch "Signals" on the Let's Talk Radio Satellite over Space Net 3, Transponder 21, 6.2 wideband audio. The show airs Fridays and Saturdays at 2330 UTC and Sundays at 1600.

• Bob Thomas has brought to our attention the disappearance of the Voice of Turkey's transmissions to North America. Because of repairs and replacement of aged equipment, these broadcasts probably will be gone until at least February. However, you can catch the English European Service at 2000 on 9445 and 2200 on 7185 and 11710.

Want something really exotic? Bob says tune in the Burma amateur operating between 13645 and 13800 kHz.

• If you are following the current troubles in Yugoslavia, you can get the Croatian side of the story on the WHRI relay of Croatian Radio Zagreb on 7315. Look for a brief English newscast shortly after 0000 and at other times as well. You can get the Serbian version on Radio Yugoslavia's North American Service at 0000 UTC on 9620 and 11735.

Negative Keying Deciphered

The question comes up from time to time as to what negative keying is, how to identify it and what can be done about it. With the DXing season in full swing, it seems like a good time to take a look at this sometimes baffling condition.

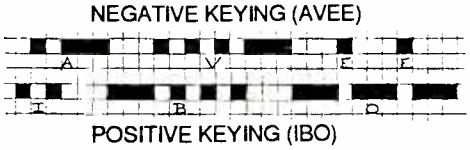
Usually you won't have any trouble recognizing negative keying. It is a rare transmitter defect where the beacon ID is sent out as an "upside-down" image of the true ID. Wherever there's a space in the true ID, there will be a tone in negative keying and vice-versa. Because of this inversion, the ID you hear will likely be a random series of dits and dahs that make no sense at all. For example, the negative keying of beacon FDR would be "IAUEE," a sure tip-off that something's wrong.

Another clue to negative keying is that there will be a dash after the ID (DAID) on US beacons. Normal US beacons don't have a DAID. Conversely, Canadian beacons, which usually do have a DAID, will have a long space instead.

Negative keying is more noticeable at close range to the transmitter site and seems to be even more apparent when you're a bit off the actual frequency. Often the condition disappears as you approach the exact frequency of the beacon. There have been some severe cases, however, where only negative keying was heard. Beacon OVO (374 kHz) for example, was logged with only negative keying a couple of years ago.

If you come across a negative keyed signal, there's an easy way to translate it back into plain Morse. Plot the negative keyed sounds on a sheet of graph paper so that single blocks represent dits and three blocks represent dahs. Allow one block to the space between individual dits and dahs and three blocks to the spaces between complete letters.

Now, right below your plot simply fill in the blocks where there is white space above and read the true ID. Many thanks to Gardner Smith, former Loggings editor of *The Lowdown* for this excellent suggestion.



A quick way to decipher negative keying.

Another keying variation worth mentioning occurs when an extra character is sent following the beacon ID, such as "E." This is often mistaken for negative keying or some other type of keying error but is actually intentional. Its presence alerts maintenance personnel that a back-up transmitter has been activated and that the primary unit needs repair.

A Voice from the Past

These days it's getting harder to find voice signals on the longwaves with many beacons scrapping their Transcribed Weather Broadcast (TWEB) service. But this wasn't always so. A couple of months ago, I asked if anyone remembered the voice station that used to operate below 180 kHz a few years back. If you were among those who guessed WGU20 (179 kHz), you got it right.

WGU20 was sporadically active from Chase, Maryland, with AM voice testing well into the mid '80s. It was to be the flagship station of a FEMA network designed for last ditch communications in the event of a widespread disaster. Funding cuts and the loss of frequency allocations eventually spelled the end for this powerhouse.

At roughly 45 thousand watts, its familiar time-tick transmissions could be heard throughout the northeast US. Every 10 seconds you could hear the friendly recorded announcement -- "Good morning. This is station WGU20. Eastern Daylight Time xx hours, xx minutes, xx seconds."

It was exciting to hear a new signal on the band, but many veteran listeners will recall the concerns about WGU20 interfering with experimental work in the 160-190 kHz lowfer band. None of this ever materialized, and at last word WGU20 remains in mothball status with no plans for reactivation.

Mailbag

• One of the most rewarding things about writing this column is getting to hear from so many of you by your cards and letters. I enjoy hearing about your loggings, equipment and other listening activities. I try to share as many letters as I can in the column. Send your news and notes to me at *MT* in care of this column. An SASE guarantees a response.

Judging from the letters I get, I don't think a wider variety of receivers can be found anywhere else in the spectrum than on the low frequencies. I hear from people using Selective RF Voltmeters, Audio Meters, homebrew units, converters and, of course, lots of government surplus.

• Terry Krey (N5THR) of Austin, Texas, wrote in to describe his unique setup. He uses a military receiver (Model R-1401 A/G) that he purchased from Fair Radio Sales. Terry writes: "This unit is a spectacular performer in every respect with a range right down to 999.5 Hz (that's right, Hertz) and up to the low end of the BC band." He makes a daily practice of sifting through this range in search of new signals using a variety of antennas. His favorite antennas include a rooftop loop, an indoor tuned loop and a Grove Skywire. His Skywire also pulls double duty as a ham band transmitting antenna.

• If you're a catalog collector, you'll want to write for a copy of the new Fair Radio Sales catalog to add to your shelf. It contains lots of interesting surplus radio/electronics items and is a great resource for LF enthusiasts. Terry passed along their mailing address: P.O. Box 1105, Lima, Ohio 45802

Loggings

This month I've put together a mix of reader loggings which includes beacons from several states and provinces. The dial spinners: Neal Smith, Missouri; Jim Keller, New York; Dennis Moriarty, Ohio; Robert Stone, New York; and Bob Polhamus, California.

BEACON LOGGINGS

Freq.	ID	Location	Contributor

PC + M1000 = SW Excitement

Turn your IBM computer (or clone) into a powerful intercept device! The **Universal M-1000** Decoder Card requires just one slot in your PC. Your computer can open up a new world of listening (and *seeing*) opportunities! You can decode standard modes such as Morse Code, Baudot RTTY and Sitor A/B. Advanced diplo.-military modes such as ARQ-M2, ARQ-E and ARQ-E3 are also supported. ASCII and Packet modes are even featured. For FAX reception (only) your computer must have either an EGA or VGA monitor (color or mono). The video quality of your FAX intercepts will amaze you. Advanced FAX imaging includes false-color and zoom features. FAX images as well as text traffic can be saved to disk for later retrieval or analysis. Despite the sophistication of this device, operation is easy through on-screen menus, status indicators and help windows. A new *datascope* feature operates in both RTTY and FAX modes. The M-1000 comes with an informative manual and software on both 3½" and 5¼" diskettes. **Only $399.95** (+$5).

CQ BUYER'S GUIDES

Brand New and Still Priced at $4.95!

NEW!

1992 EQUIPMENT BUYER'S GUIDE

Info on how to get your No-code Amateur Radio License at no extra cost!

The **1992 Equipment Buyer's Guide** is crammed full of information on all the latest state-of-the-art HF, VHF and UHF radios, test equipment and accessories for all levels of Amateur Radio interest. Countless hours were spent going through manufacturers product sheets, ads and on the telephone putting this invaluable Buyer's Guide together. Listings include all Amateur Radio equipment manufacturers. As an extra value, the Buyer's Guide gives details on getting the popular new No-Code Amateur license, a beginner's primer for getting started in Packet Radio by noted "packeteer" Buck Rogers, K4ABT and a fascinating in-depth look at lightning protection by world class DX'er, John Dorr, K1AR. ©1991.

Jack Albert

The Book Store

With Christmas a few weeks away, you are probably rushing to purchase the perfect gift for your loved one. The question is, what will he or she purchase for you? There's still time to drop a hint or two like an M1000 or a new receiver, but if your budget can't afford it, how about a new book?

The fifth edition *World Press Services Frequencies* by Thomas Harrington has been available now for several months from Universal Electronics, 4555 Groves Rd., Suite 13, Columbus, OH 43232. I just received my copy about a month ago and so far it's been very useful. The problem I always have with frequency lists is that whenever I look up something and then go to the radio, the signal isn't there. This raises the question, how was the list generated and at what time did the contributor copy the message? Many frequency lists are generated by contributors who send in the loggings. Even if the listing shows the time, how do I know if the signal will propagate to my part of the world?

You have to rely on the experts and the resources of the editor. I can say that Tom Harrington is one expert you can trust. I purchased the *WPSF* third edition in 1982 and I found listings that are still in use today like SUW 289 on 15845.0 kHz in Cairo, Egypt. I noticed that the fifth edition is about the same thickness as the third; however, the new book has fewer listings. The lettering is larger. It's inevitable that this would happen. With the satellites dominating terrestrial communications, only third world countries are using HF for RTTY press frequencies, and that number dwindles each year.

On occasion you can catch UPI or AP transmitting on random frequencies, but who knows where it's coming from? Maybe they're firing up the old transmitter for old time's sake or maybe the transmit signal is still being maintained for backup communications. The Voice of America still transmits RTTY news on 10233, 10234, and 18215 kHz to name a few frequencies.

WPSF gives a brief discussion on antennas and equipment, such as receivers and modems, and it has a chart to convert the four U.S. time zones to GMT.

One other note on RTTY press frequencies: For many years I have been able to copy news from TASS, the Soviet news agency, which has been retransmitted out of Cuba on 14901 kHz. With the fall of communism and the breaking away of their satellite countries, it will be interesting to see what happens to Cuba and CLN451.

The *USSR Merchant Ship List* is another book. No, you won't find it in a marine store. This one, also from Universal Electronics, talks about monitoring RTTY signals from Soviet merchant ships. It describes the organization of the Soviet merchant fleet and shows a detailed explanation of the ship's listing format. It also describes the message format that you can copy using your RTTY equipment. You will, however, need a decoder that can copy the Third Shift Cyrillic. Decoders like the M600, M1000, M7000, or the SWL text cartridge (now discontinued) from AEA for the Commodore 64 can handle it. You also need the skill to identify this type of transmission, because if you copy it using normal RTTY, the text will appear cryptic.

Figure 1

Copying cyrillic using normal TSC decoding is cryptic enough if you can't read Russian. Figure 1 is a printout of a Russian ship I copied several years ago using a Commodore and the SWL text cartridge. It's printed using a format known as transliteration. It replaces the Russian character that can't normally be printed on a printer using English text with the English phonetic spelling. A good example is the Russian that looks like the number 4. It has the CH sound. Get the book. It lists the full alphabet.

One problem with the M7000 is it can show the actual Cyrillic characters on the monitor but it can't send them to the printer. The printer doesn't even display the transliterated form. There is software for the IBM PC or compatible called "M" that can print the transliterated characters but it isn't available on the commercial or public domain market. I received a copy from the creator a few years ago.

Last, but not least, there's *Ferrell's Confidential Frequency List* by A.G. Halligey. It has a very good RTTY list including ship, embassy, military and Interpol. I highly recommend this one because it always shows an up-to-date listing and has a primer on RTTY and other data modes. This one is available from Grove Enterprises.

I would like to wish you and yours a Merry Christmas and a Happy New Year, and may you have good DXing in '92.

Figure 2 contains a few RTTY/FAX loggings from Richard Crisp crisp@netcom.com

AIRCRAFT TRAFFIC

Eagle Air Inc., 12.740 MHz (Cessna 172M). Full data prepared QSL card. Received in two days for an English utility report and mint postage. Aircraft address: P.O. Box 1951, Hagerstown, Md. 21740. (Hank Holbrook, Dunkirk, MD)

Hapag-Lloyd 601, D-AHLA 12.4525 MHz (Airbus 310-300). Full data prepared QSL card verified by chief inspector, Avionics. Received in 92 days for an English utility report and one IRC. Aircraft address: Hapag-Lloyd Flug, Pruforganisation, Postfach 42 02 40, D-3000 Hanover, Germany. (Patrick O'Connor, Hinsdale, NH)

Olympic 421, SX-OAE 13.2300 MHz (Boeing 747). Full data prepared QSL card verified by Captain G. Kokkinis, chief pilot, B-747. Received in 53 days for an English utility report and one IRC. Aircraft traffic: Olympic Airways, 100 Syngrou Ave., Athinai 404, Greece. (O'Connor, NH)

Air India 111, VT-EGB (Boeing 747-200). Full data prepared QSL card and photo with illegible verification signature. Received in 30 days for an English utility report and one IRC. Aircraft address: 218 Backbay Reclamation, Nariman Point, Bombay 40000, India. (O'Connor, NH)

AUSTRALIA

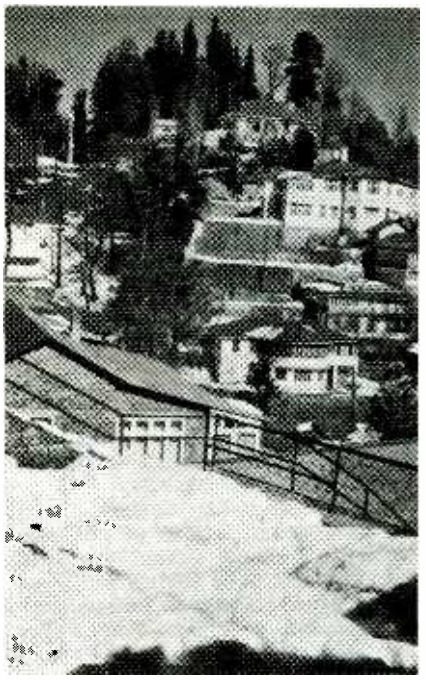
VNG-Time station, 16.000 kHz. Full data QSL paper folder, photo, and station information sheet, verified by Marion Leiba. Received in 21 days for an English utility report and one U.S. dollar. Station address: GPO Box 1090, Canberra, ACT, Australia 2601. (Robert Landau, Secaucus, NJ)

CHINA

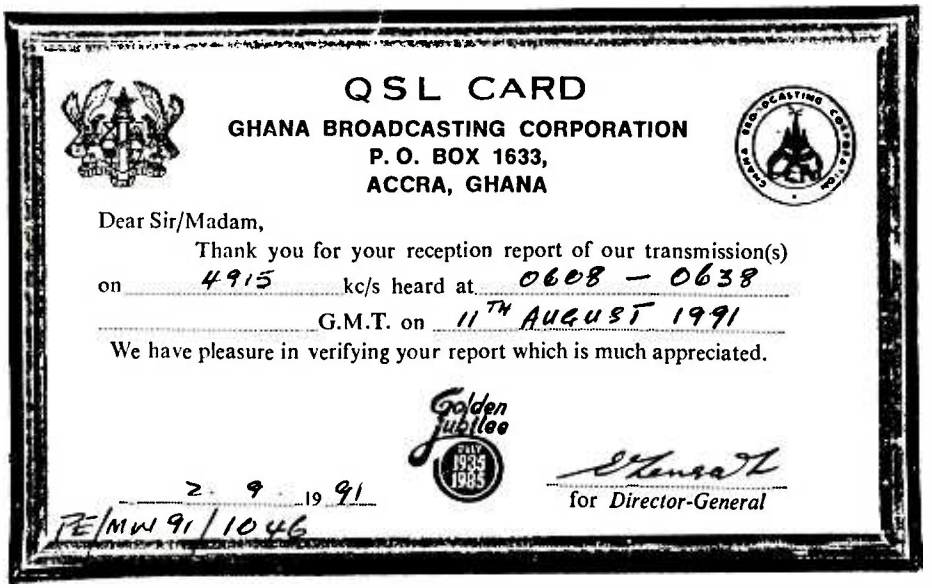
Radio Beijing, 11.755 kHz. Full data QSL card, station souvenirs, without verification signer. Received in 28 days for an English report. Station address: English Dept., Beijing, People's Republic of China. (Landau, NJ)

COSTA RICA

Radio for Peace International, 7.375 kHz/USB. Full data QSL card and station souvenirs, verified by James Latham. Received in 54 days for an English report. Station address: Apartado 88, Santa Ana, Costa Rica. (M. McFerrin, Fair Haven, MI)



This QSL was received by John Miller of Thomasville, Georgia, verifying his reception of Radio Pakistan's Slow Speed Bulletin.



QSL CARD

GHANA BROADCASTING CORPORATION
P. O. BOX 1633,
ACCRA, GHANA

Dear Sir/Madam,

Thank you for your reception report of our transmission(s) on 4915 kc/s heard at 0608 – 0638 G.M.T. on 11TH AUGUST 1991

We have pleasure in verifying your report which is much appreciated.

Golden Jubilee 1935 1985

2 . 9 . 1991

for Director-General

RE/MW 91/1046

Scott Krauss of Cleveland, Ohio, received this QSL card from the Ghana Broadcasting Corporation.

ECUADOR

HCJB, 15.155 kHz. Full data 1983 issue card and 60th anniversary card, verified by Roger Stubb. Received in 35 days for an English report. Station address: Casilla 691, Quito, Ecuador. (John Carson, Norman, OK)

FRENCH GUIANA

Radio Japan via Montsinery, Guiana, 15.325 kHz. No data Japanese festival card, without verification signer. Received in 21 days for an English report. Station address: N.H.K., Tokyo, 150-01 Japan. (Nicolas Adams, Newark, NJ)

NEW ZEALAND

Radio New Zealand, 17.770 kHz. Full data QSL card, schedule and New Zealand map, verified by Lloyd Y. Received in 22/32 days for an English report and 3/4 IRCs. Station address: P.O. 2092, Wellington, New Zealand. (Stephen Hunter, Drexel Hill, Pa) (Carson, OK)

NONDIRECTIONAL BEACONS

TIS, Woodenhawk, Delaware, 530 kHz. Full data QSL letter, verified by Carl Hulak. Received in 12 days for an English utility report and mint postage. Station address: Dept. of Transportation, P.O. Box 778, Dover, Delaware 19903. (Holbrook, MD)

PAPUA NEW GUINEA

NBC-Radio Eastern Highlands, 3.395 kHz. Form letter on NBC network letterhead and full data card, verified by Paia Ottawa, station technician. Received in 42 days for an English report and two IRCs. Station address: P.O. Box 311, Goroka, EHP, Papua New Guinea. (Thomas Risher, Whittier, CA)

SHIP TRAFFIC

Indiana Harbor-WXN3191, 156.500 MHz (bulk carrier). Full data prepared QSL card, stamped with ship's seal, verified by Capt. H. Peter Gronwall. Received in 15 days for an English utility report. Ship address: c/o Soo Locks Post Office, Saulte Ste. Marie, MI 49783. (Russ Hill, Ferndale, MI)

James R. Barker-WYP8657, 156.600 MHz (bulk carrier). Full data prepared QSL card, stamped with ship's seal, verified by Mitchell B. Hallin, master. Received in 12 days for an English utility report. Ship address: c/o Soo Locks Post Office, Saulte Ste. Marie, Michigan 49783. (Hill, MI)

Mesabi Miner-WYQ4356, 156.300 MHz (bulk carrier). Full data prepared QSL card, stamped with ship's seal, verified by Capt. Michael J. Elson. Received in 12 days for an English utility report. Ship address: c/o Soo Locks Post Office, Saulte Ste. Marie, MI 49783. (Hill, MI)

Overseas Arctic-KLEZ, 16.587.1 kHz (tanker). Full data prepared QSL card verified and stamped with ship's seal, signed by radio officer. Received in 33 days for a follow-up utility report. Ship address: c/o Maritime Overseas Corp., 511 Fifth Ave., New York, N.Y. 10017. (Hill, MI)

New York Sun-WSKD, 500 kHz (oil tanker). Full data prepared QSL card verified. Received in seven days for an English utility report and mint postage. Ship address: Sun Transport Inc., Box 2224, Aston, Pa. 19104. (Holbrook, MD)

Nickolaus-C6CO3, 500 kHz (oil tanker). Full data prepared QSL card verified. Received in 96 days for an English utility report. Ship address: c/o Peninsular Electronics, 13-17 Long Lane, London EC1A 9PN United Kingdom. (Holbrook, MD)

Hoegh Duke-VRPZ 500 kHz (general cargo/container). Full data prepared QSL card verified by radio officer. Received in 118 days for an English utility report and one U.S. dollar. Ship address: Hoegh, Leif & Co. A/S, Wergelandsvein 7, Postboks 2596 Solli N-0203 Oslo 2, Norway. (Holbrook, MD)

Nestefox-OIHL 500 kHz (LPG/C DWT 6870). Full data prepared QSL card verified. Received in 63 days for an English utility report and one U.S. dollar. Ship address: Neste O/Y, Kerilaniemi, SF-02150 Espoo, Finland. (Holbrook, MD)

SWAZILAND

Trans World Radio, 7.200 kHz. Full data color card, verified by L. Stauropoulos. Received in 52 days for an English report and three IRCs. Station address: Box 64, Manzini, Swaziland. (Risher, CA)

UNITED STATES

KGEI, 15.280 kHz. Full data QSL, station souvenirs and schedules, verified by Jesus C. Elizondo. Received in 75 days for an English report. Station address: Box 15, San Francisco, CA 94101. (Ed Mayberry, Cedar Park, TX)

WDIH-90.3 FM (380 watts). Full data personal letter signed by Rev. George A. Copeland. Received in 30 days for a follow-up FM report. Station address: P.O. Box 186, Jersey Rd. and Hearn Land, Salisbury, Maryland 21801. (Holbrook, MD)

WXPZ-101.3 FM. Full data personal letter, signed by Bill Sammons Jr., general manager. Received in 14 days for an FM report. Station address: P.O. Box 555, Milford, Delaware 19963. (Holbrook, MD)

English language

shortwave guide

How to Use the Shortwave Guide

1: Convert your time to UTC.

Eastern and Pacific Times are already converted to Coordinated Universal Time (UTC) at the top of each page. The rule is: convert your local time to 24-hour format; add (during Standard Time) 5,6,7, or 8 hours for Eastern, Central, Mountain, or Pacific Time, respectively.

Note that all dates, as well as times, are in UTC: for example, the BBC's "Ken Bruce Show" (0030 UTC Sunday) will be heard on Saturday evening (7:30 PM Eastern, 4:30 PM Pacific) in North America, not on Sunday.

2: Choose a program or station you want to hear.

Some selected programs appear on the lower half of the page for prime listening hours. If it's news you're interested in, check out the complete "Newsline" listing, which begins on the next page.

Occasionally program listings will be followed by "See X 0000." This information indicates that the program is a re-run, and refers to a previous summary of the program's content. The letter stands for a day of the week, as indicated below, and the four digits represent a time in UTC.

S: Sunday
M: Monday
T: Tuesday
W: Wednesday
H: THursday
F: Friday
A: SAturday

3: Find the frequencies for the program or station you want to hear.

Look at the page which corresponds to the time you will be listening. Comprehensive frequency information for English broadcasts can be found at the top half of the page.

The frequency listing uses the same day codes as the program listings; if a broadcast is not daily, those day codes will appear before the station name.

4: Choose the most promising frequencies for the time, location, and conditions.

Of course, every station can't be heard all the time. To help you find the right frequency, we've included information on the target area of each broadcast. Frequencies beamed toward your area will generally be easier to hear than those beamed elsewhere, even though the latter will often still be audible. Every frequency is followed by one of these target codes:

am:	The Americas	me:	Middle East
na:	North America	as:	Asia
ca:	Central America	au:	Australia
sa:	South America	pa:	Pacific
eu:	Europe	va:	various
af:	Africa	do:	domestic broadcast
me:	Middle East	om:	omnidirectional

Consult the propagation charts. To help you further find the right frequency, we've included propagation charts at the back of this section, which take into account conditions affecting the audibility of shortwave broadcasts. Simply pick out the region in which you live and find the chart for the region in which the station you want to hear is located. The chart indicates the optimum frequencies for a given time in UTC.

Programs for Shortwave Listeners

This section lists programs with news and information about shortwave radio for listeners. (RR) denotes reruns of programs broadcast earlier in the week. For brevity, only programs at certain peak listening times are included.

Sundays
0025 Spanish Foreign Radio: DX Spot
0030 WRNO: World Of Radio
0035 Radio Havana Cuba: DX'ers Unlimited
0039 HCJB: DX Party Line
0110 Voice of America (Americas, Caribbean): Comm. World
0125 Spanish Foreign Radio: DX Spot (RR)
0130 Radio For Peace Int'l: World Of Radio
0218 Swiss Radio Int'l: Swiss Shortwave Merry-Go-Round
0230 KSDA, Guam: DX Asiawaves
0235 Radio Budapest: DX World
0235 Radio Havana Cuba: DX'ers Unlimited (RR)
0239 HCJB: DX Party Line (RR)

THE JAPAN RADIO CO.

NRD-535

THE NEXT GENERATION IN HIGH-PERFORMANCE HF RECEIVERS

Once again JRC breaks new ground in shortwave receiver design. The new NRD-535 has all the features SWLs and amateurs have been waiting for. General coverage from 0.1 to 30 MHz in AM, USB, LSB, CW, RTTY, FAX and Narrow FM modes. Advanced ECSS operation for phase-lock AM reception. Variable bandwidth control (BWC). Tuning accuracy to 1 Hz possible with direct digital synthesis. 200 memory channels with scan and sweep operation. Triple Superheterodyne receiving system. Superb sensitivity, selectivity and image rejection. Dual-width noise blanker eliminates impulse noise. Squelch, RF Gain, Attenuator, AGC and Tone controls. Optional RTTY demodulator available. 24 hour clock/timer. Easy to read vacuum fluorescent display with digital S-meter. AC and DC operation. Plus the most comprehensive computer interface found on any radio to date. Call or write today for a full color brochure, price list and dealer information.

SORRY, no credit cards this offer.

Improve Your Scanning Coverage!

GRE America is proud to introduce a new family of products to enhance your scanning pleasure! First, GRE has designed the new **Super Converter 9001** for base model scanners. The 9001 converts 810 MHz - 950 MHz down to 410 MHz - 550 MHz. The 9001 is the perfect alternative to buying a new, expensive scanner covering the 800 MHz band. Next, GRE announces the new **Super Amplifier 3001** for base model scanners. The 3001 will increase gain by as much as 20 dB, and is engineered to help scanners with low sensitivity pull in weak signals. Both products use BNC connectors, (1) 9 volt battery and have an off/pass switch for returning to normal operation.

Super Converter 9001 & Super Amplifier 3001

Super Converter II

Super Amplifier

All-Band Antenna

U.S. & International Distributorship inquiries welcome. Please call GRE for further information!

Let GRE Manufacture Your Radio Products!

GRE America, Inc. is a leading OEM developer and manufacturer of radio telecommunications products such as:

● Cordless Telephones ● CB & Marine Radios ● Spread Spectrum "engines" ● Remote Monitoring Systems

If you need a high quality, cost competitive, reliable manufactuerer, GRE will provide you with a free production quotation.

For more information, please call GRE at (800) 233-5973. GRE is a subsidiary of General Research of Electronics, Inc.

SELECTED PROGRAMS

Sundays

0101 BBC: Play Of The Week. This month's drama: "Damaged Goods" (1st); "Amadeus" (8th, starts at 0030 UTC); "The Incredible Samuel Pepys" (15th); "Charley's Aunt" (29th).
0109 Deutsche Welle: Commentary. Opinion on current issues.
0115 Radio Japan: This Week. The major events of the week, and current affairs topics in Japan.
0117 Deutsche Welle: Mailbag or Nickelodeon. Listener letters, or listener requests for German music.
0134 Deutsche Welle: German by Radio. An advanced German language course for English speakers.

Mondays

0101 BBC: Feature/Drama. The world's big political crises are examined on "Conflicting Opinions" (2nd/9th/16th); fragrance is the subject of "Heaven Scent" (23rd); the month ends with "The River Young" (from 30th).
0109 Deutsche Welle: Commentary. See S 0109.
0115 Radio Japan: Let's Learn Japanese. See S 0315.
0116 Deutsche Welle: Living in Germany. A weekly look at the social scene in Germany.
0130 Radio Japan: DX Corner. See S 0330.
0134 Deutsche Welle: Larry's Random Selection. Larry Wayne takes a look at Germany from the lighter side.
0145 BBC: Classical Music. The month opens with "Cole Porter Among Friends" (2nd); "The Mozart Phenomenon" looks at the artist's amazing success (through February 1st).
0155 Radio Japan: Viewpoint. See S 0355.

Tuesdays

0105 BBC: Outlook. See M 1405.
0109 Deutsche Welle: European Journal. See M 0209.
0115 Radio Japan: In Conversation. See M 0315.
0130 BBC: Folk In Britain. Ian Anderson is the host, folk music is the fare.
0134 Deutsche Welle: Transatlantic Diary. Cultural, science, and economic developments between the U and Germany.
0140 Radio Japan: Let's Practice Japanese. See M 0320.
0145 BBC: Health Matters. New medical developments and methods of keeping fit.
0150 Radio Japan: Commentary. See M 0350.
0155 Radio Japan: Tokyo Pop-In. See M 0555.

Wednesdays

0105 BBC: Outlook. See M 1405.
0109 Deutsche Welle: European Journal. See M 0209.
0115 Radio Japan: Japan Focus. See T 0315.
0130 BBC: Talks. This month, "That's The Way It Was" profiles not Walter Cronkite, but pop groups that have fallen out of favor (through January 1st).
0130 Radio Japan: Into Japan. See T 0330.
0134 Deutsche Welle: Transatlantic Diary. See T 0134.
0145 BBC: Country Style. David Allan profiles the country music scene on both sides of the pond.
0150 Radio Japan: Commentary. See M 0350.
0155 Radio Japan: Tokyo Pop-In. See M 0555.

Thursdays

0105 BBC: Outlook. See M 1405.
0109 Deutsche Welle: European Journal. See M 0209.
0115 Radio Japan: Asia Hotline. See W 0315.
0130 BBC: Waveguide. See M 0530.
0130 Radio Japan: Asian Plaza. See W 0330.
0134 Deutsche Welle: Transatlantic Diary. See T 0134.
0140 BBC: Book Choice. A short review of a recently released book.
0145 BBC: The Farming World. Agricultural news and technological innovations for farmers.
0150 Radio Japan: Commentary. See M 0350.
0155 Radio Japan: Tokyo Pop-In. See M 0555.

Fridays

0105 BBC: Outlook. See M 1405.
0109 Deutsche Welle: European Journal. See M 0209.
0115 Radio Japan: Business Today. See H 0315.
0130 BBC: Seven Seas. Malcolm Billings presents news about ships and the sea.
0130 Radio Japan: Economy Update. See H 0330.
0134 Deutsche Welle: Transatlantic Diary. See T 0134.

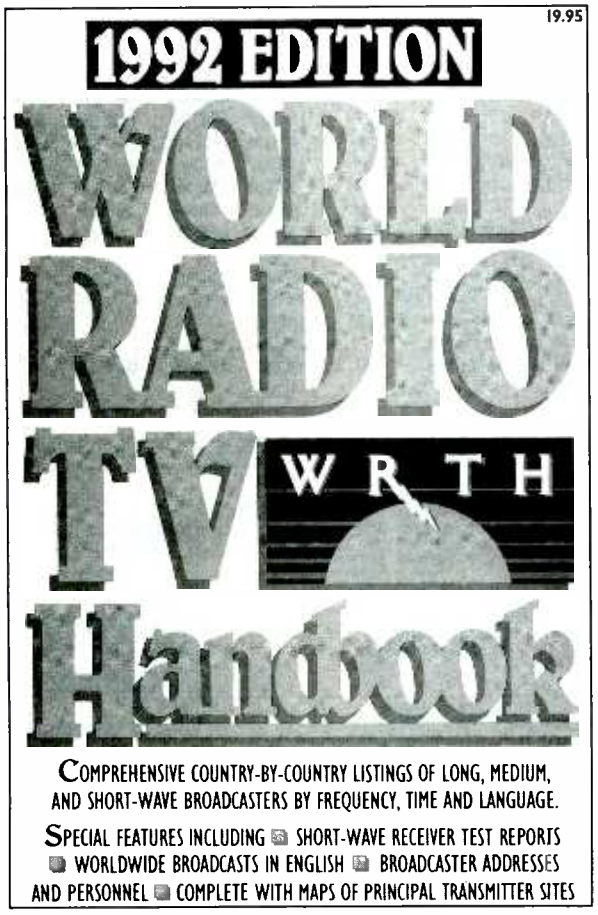
0623 Deutsche Welle: Panorama. See A 0223.
0630 BBC: Meridian. See W 0630.
0634 Deutsche Welle: Man and Environment. See T 0234.

www.americanradiohistory.com

If you order **now**, you will receive in January the 1992 edition of *World Radio TV Handbook*, acclaimed by experts and hobby listeners alike as the ultimate source book for international broadcast monitoring. *WRTVH* remains the best seller in its field, and rightfully so -- it is a giant collection of frequencies, addresses, program schedules, beam headings and other pertinent data concerning every major radio station in the world - longwave, medium wave, and shortwave.

Identify those elusive DX stations by their musical interval signals, slogans and languages shown in the exhaustive listings within its pages.



Special Pre-Publication Offer

Order before Dec 30, 1991, and pay only **$16.95 -- SAVE $4.50**

Orders after Dec 30, $17.95 plus $3.50 UPS in US

Additional chapters provide expert guidance in selecting equipment and accessories for listening.

This 600-page standard reference should be on the bookshelf of every shortwave listener. Reserve your copy at a special pre-publication discount -- only $16.95 (a $21.45 value). We will prepay shipping in the U.S.! **But you must order now -- before Dec 30, 1991.**

Call 1-800-438-8155 for *VISA, MasterCard or send a check or money order to Grove Enterprises, P.O. Box 98, Brasstown, NC 28902.

The 1992 World Radio TV Handbook

46th Edition

* Payment will be processed at time of order. For foreign surface mail add $8.00 (Europe); foreign air mail add $5.50 (Canada) or $20 (Europe).

News Flash

Israel Radio restores all broadcasts to the US!

Too late to make it into the frequency guide, this news flash arrived from Kol Israel's London office:

At an early morning meeting on November 4, the senior management of Israel Radio were ordered by the Israel Government's Minister of Education and Culture (Mr. Zevulan Hammer) who has responsibility for broadcasting, to reinstate all the overseas broadcasts that were cut on August 4th. He also asked Israel Radio to improve transmission and audibility. This takes immediate effect and from tonight the following schedule will operate. However, the schedule may be subject to alteration as further services are added.

Kol Israel Overseas Services Winter Schedule

```
VALID  4th November 1991 - 7th March 1992
All times GMT/UTC

SELECTED PROGRAMS

Sundays

1201 BBC: Play Of The Week. See S 0101.
1215 Radio Beijing: China Anthology. See S 1115.
1225 Radio Beijing: Music Album. See S 1125.
1240 Radio Beijing: Listeners' Letterbox. See S 1140.

Mondays

1215 BBC: Quiz. This month, hear "My Word" (2nd/9th/16th/23rd), followed by an experimental drama and theatre game show, "Break A Leg!" (30th).
1215 Radio Beijing: Current Affairs. See M 1115.
1240 Radio Beijing: Learn to Speak Chinese. See M 1140.
1245 BBC: Sports Roundup. See S 0315.

Tuesdays

1215 BBC: Multitrack 1: Top 20. See M 2330.
1215 Radio Beijing: Current Affairs. See M 1115.
1240 Radio Beijing: Listeners' Letterbox. See S 1140.
1240 Radio Beijing: Listeners' Letterbox. See S 1140.
1245 BBC: Sports Roundup. See S 0315.

Wednesdays

1215 BBC: New Ideas. See M 1615.
1215 Radio Beijing: Current Affairs. See M 1115.
1235 BBC: Talks. See M 1635.
1240 Radio Beijing: Learn to Speak Chinese. See M 1140.
1245 BBC: Sports Roundup. See S 0315.

Operation room at Radio Japan.

Thursdays

1215 BBC: Multitrack 2. See W 2330.
1215 Radio Beijing: Current Affairs. See M 1115.
1240 Radio Beijing: Culture in China. See H 1140.
1245 BBC: Sports Roundup. See S 0315.

Fridays

1215 BBC: Feature. A blind girl born in Iran doesn't have much of a future, unless she's "In Touch" (6th); "The Re-Making Of Russia" looks at the potential of the troubled republic (through January 17th).
1215 Radio Beijing: Current Affairs or The Business Show. See F 1115.
1240 Radio Beijing: In the Third World. See F 1140.
1245 BBC: Sports Roundup. See S 0315.

Saturdays

1215 BBC: Multitrack 3. See F 2330.
1215 Radio Beijing: Press Clippings. See S 0015.
1220 Radio Beijing: Travel Talk. See S 0020.
1228 Radio Beijing: Cooking Show. See S 0028.
1235 Radio Beijing: Music from China. See S 0035.
1245 BBC: Sports Roundup. See S 0315.

1455 Radio Japan: Viewpoint. See S 0355.

Mondays

1405 BBC: Outlook. Conversation, controversy, and color from the UK and the world.
1415 Radio Beijing: Current Affairs. See M 1115.
1415 Radio Japan: People. See M 0515.
1430 BBC: Off The Shelf. See M 0430.
1430 Radio Japan: Crosscurrents. See M 0530.
1440 Radio Beijing: Learn to Speak Chinese. See M 1140.
1445 BBC: Talks. Foreign journalists present personal "Images of Britain" (2nd/9th); "Ships From Seven Seas" looks at the development of seafaring (through January 27th).
1450 Radio Japan: Commentary. See M 0350.
1455 Radio Japan: Tokyo Pop-In. See M 0555.

Tuesdays

1405 BBC: Outlook. See M 1405.
1415 Radio Beijing: Current Affairs. See M 1115.
1415 Radio Japan: Japan Focus. See T 0315.
1430 BBC: Off The Shelf. See M 0430.
1430 Radio Japan: Into Japan. See T 0330.
1440 Radio Beijing: Listeners' Letterbox. See S 1140.
1445 BBC: Classical Music. See M 0145.
1450 Radio Japan: Commentary. See M 0350.
1455 Radio Japan: Tokyo Pop-In. See M 0555.

Wednesdays

1405 BBC: Outlook. See M 1405.
1415 Radio Beijing: Current Affairs. See M 1115.
1415 Radio Japan: Asia Hotline. See W 0315.
1430 BBC: Off The Shelf. See M 0430.
1430 Radio Japan: Asian Plaza. See W 0330.
1440 Radio Beijing: Learn to Speak Chinese. See M 1140.
1445 BBC: Good Books. Recommendations of books to read.
1450 Radio Japan: Commentary. See M 0350.
1455 Radio Japan: Tokyo Pop-In. See M 0555.

Thursdays

1405 BBC: Outlook. See M 1405.
1415 Radio Beijing: Current Affairs. See M 1115.
1415 Radio Japan: Business Today. See H 0315.
1430 BBC: Off The Shelf. See M 0430.
1430 Radio Japan: Economy Update. See H 0330.
1440 Radio Beijing: Culture in China. See H 1140.
1445 BBC: Recording Of The Week. See M 0545.
1450 Radio Japan: Commentary. See M 0350.
1455 Radio Japan: Tokyo Pop-In. See M 0555.

Fridays

1405 BBC: Outlook. See M 1405.
1415 Radio Beijing: Current Affairs or The Business Show. See F 1115.
1415 Radio Japan: Music Mix. See F 0315.
1430 BBC: Off The Shelf. See M 0430.
1440 Radio Beijing: In the Third World. See F 1140.
1445 BBC: Talks. See S 0445.
1450 Radio Japan: Commentary. See M 0350.
1455 Radio Japan: Tokyo Pop-In. See M 0555.

Saturdays

1401 BBC: John Peel. See T 0330.
1415 Radio Beijing: Press Clippings. See S 0015.
1415 Radio Japan: This Week. See S 0115.
1420 Radio Beijing: Travel Talk. See S 0020.
1428 Radio Beijing: Cooking Show. See S 0028.
1430 BBC: Sportsworld. Shortwave's "Wide World Of Sports" with Paddy Feeny.
1435 Radio Beijing: Music from China. See S 0035.

Monitoring Post Pin-Up

Bob Babin, a communications officer for the Shrewsbury, Massachusetts Department of Defense, sent in this photo of his listening post. An NRD 535D, NRD 525, ICOM R7000, and Universal M7000 Decoder are just some of the equipment he uses.

Enter A World Of Excitement with a Subscription to

Popular Electronics®

Get the latest electronic technology and information monthly!

Now you can subscribe to the magazine that plugs you into the exciting world of electronics. With every issue of Popular Electronics you'll find a wide variety of electronics projects you can build and enjoy.

Popular Electronics brings you informative new product and literature listings, feature articles on test equipment and tools—all designed to keep you tuned in to the latest developments in electronics. So if you love to build fascinating electronics, just fill out the subscription form below to subscribe to Popular Electronics... It's a power-house of fun for the electronics enthusiast.

EXCITING MONTHLY FEATURES LIKE:

- ❑ **CONSTRUCTION**—Building projects from crystal sets to electronic roulette
- ❑ **FEATURES**—Educational training on digital electronics, Ohm's Law, Antennas, Communications, Antique Radio, Simplified Theory
- ❑ **HANDS-ON-REPORTS**—User test comments on new and unusual consumer products
- ❑ **SPECIAL COLUMNS**—Think Tank, Circuit Circus, Computer Bits, DX Listening, Antique Radio, Amateur, Scanner Scene

PLUS: ALL OUR GREAT DEPARTMENTS!

You'll get 12 exciting and informative issues of Popular Electronics for only $18.95. That's a savings of $16.45 off the regular single copy price. Subscribe to Popular Electronics today! Just fill out the subscription order form below.

shortwave guide

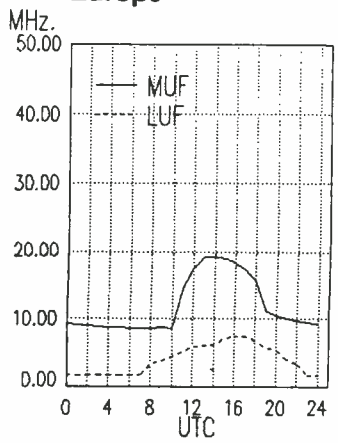
How to use the propagation charts

Propagation charts can be an invaluable aid to the DXer in determining which frequencies are likely to be open at a given time. To use the propagation charts, choose those for your location.

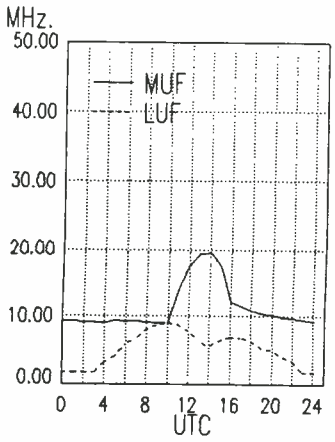
Then look for the one most closely describing the geographic location of the station you want to hear.

Conditions for areas EAST of the Mississippi and ...

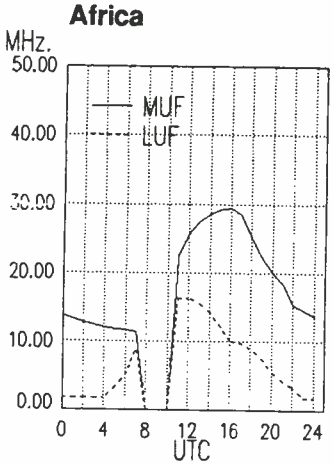
Europe



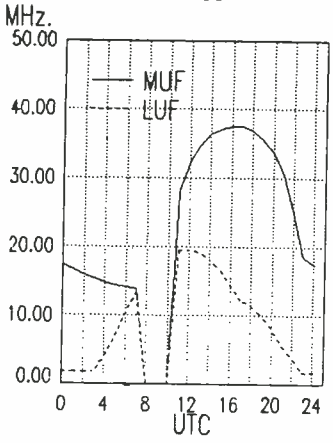
Middle East



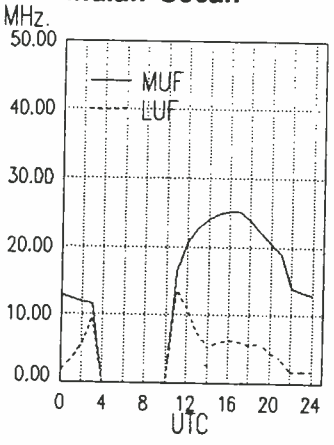
Africa



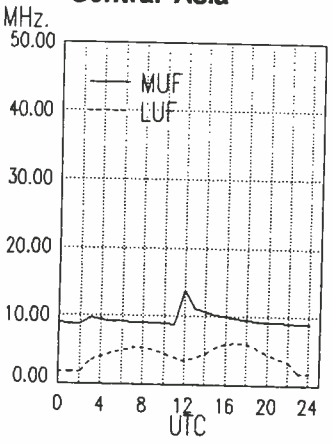
South Africa



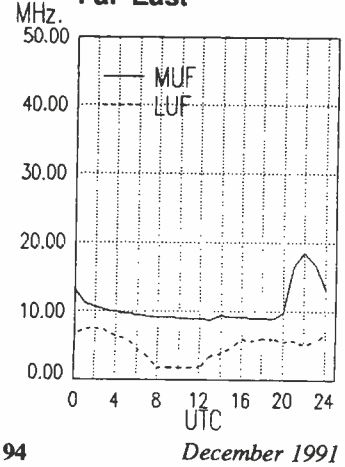
Indian Ocean



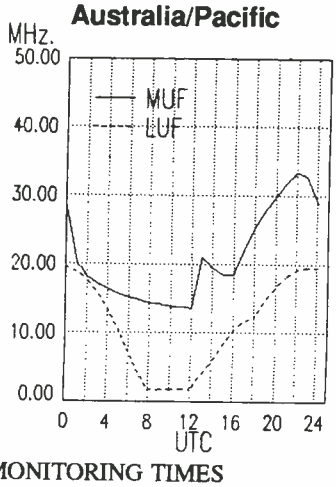
Central Asia



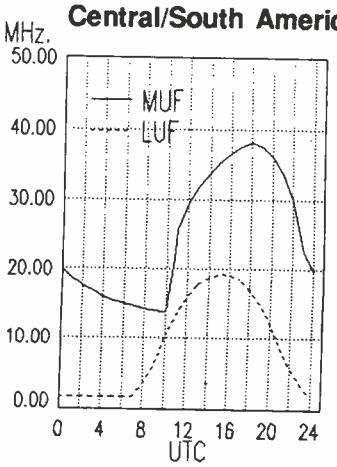
Far East



Australia/Pacific



Central/South America



www.americanradiohistory.com

Once you've located the correct charts, look along the horizontal axis of the graph for the time that you are listening. The top line of the graph shows the Maximum Usable Frequency (MUF) and the lower line the Lowest Usable Frequency (LUF) as indicated on the vertical axis of the graph. The strongest signals will be near the MUF.

While there are exceptions to every rule (especially those regarding shortwave listening), you should find the charts helpful in determining the best times to listen for particular regions of the world. Good Luck!

Conditions for areas WEST of the Mississippi and ...

Europe

Passport to World Band Radio

Sangean ATS-818CS World Band Cassette Recorder

Nearly every TV viewer has one: a video cassette recorder (VCR) to capture TV transmissions. But to record shortwave broadcasts automatically, the current choices have been mediocre and pricey for what they do. At best, you can buy certain models of shortwave radios that interface with selected models of cassette recorders to record automatically. Or, more simply, you can now buy a receiver that does it all.

First with Digital Frequency Circuitry

Problem is, until now those all-in-one receivers have been poor substitutes for the sorts of devices exacting listeners usually consider acceptable. Too, until now world band cassette recorders (WCRs), only came with analog frequency readout. This makes it nigh impossible to adjust the set in advance to the desired frequency for recording.

Now, Sangean has well and truly come to the rescue with its just-released ATS-818CS WCR. It's a one-event device, which means you can't record more than one time automatically. That's unlike most VCRs, which can record at least four events automatically. It is also a one-day event. So if, say, it's Friday, you can't set it to record on a Sunday.

Another difference is that while you can set the radio's recording "on" time, the only way it shuts off automatically is when the tape runs out.

ATS-818 with a Difference

The ATS-818CS is essentially the new ATS-818 — also sold as the Realistic DX-390 — but with a cassette deck added and smaller speaker cavity. It falls into the large-midsize category, being similar in size and appearance to the Grundig Satellit 500 and weighing 4.5 pounds with batteries. It not only operates from batteries, but also 120V current from the supplied outboard transformer.

This makes the '818CS a bit unwieldy for taking on airplane trips, but it's ideal for use around the house, backyard or on car trips.

Fairly Advanced Operation

The '818CS tunes the usual FM band, in stereo (via earphones only, although earphones aren't supplied), plus longwave, AM and the entire shortwave spectrum through 29999 kHz. Tuning increments are 1 kHz, and the large LCD's frequency counter reads out to that same degree of resolution. Tuning is by knob (in 1 or 5 kHz increments on shortwave), keypad, up/down slewing (in 5 kHz increments on shortwave) and rudimentary but effective scanning.

www.americanradiohistory.com

That keypad, alas, is not in the conventional telephone-pad format, nor is it backlit, but it has excellent "feel." Additionally, 45 presets are included, of which 18 function on shortwave. Those presets are activated via the keypad, not via separate buttons as on, say, the Sony ICF-2010, which requires only one push of a button to bring up a desired station.

Single sideband is demodulated via a BFO switch wedded to a variable-pitch potentiometer. There are no separate LSB or USB controls, and although the set is fairly stable, the potentiometer tunes so broadly that it requires a safecracker's touch to fine tune properly. The end result, however, sounds fine, especially if the "narrow" bandwidth is used.

Signal strength is displayed by a five-level indicator on the LCD, which is backlit. That same indicator automatically transforms into a six-second battery-strength readout when the radio is switched off. Additionally, there's a power lock switch, useful for traveling to keep the batteries from running down accidentally. Tone is adjusted by a lone control, a step backwards from the separate bass and treble controls found on the sibling ATS-803A portable.

Dual Bandwidths Helpful

Other features include dual bandwidths, an RF gain control, sleep off and a 24-hour clock/timer with two time zones. Thankfully, UTC is displayed at all times, regardless of whether the radio is on or off.

The '818CS is a typical performer for within its price class. Sensitivity, an important variable in the central and western reaches of North America, is good, but not outstanding. Audio quality is only fair, thanks largely to the set's small speaker mandated by the cassette deck, which takes up much of the space set aside for the speaker in the ATS-818. Audio also sounds somewhat hissy.

Again comparing it to the Sony ICF-2010, the Sony is a bit better at pulling in weak stations and has more pleasant audio quality.

Selectivity in the wide position is rather broader than is ideal for shortwave, but adequate for receiving a good many signals without undue interference. The narrow position fares much better — it's a well-chosen width for when adjacent-channel interference rears its head.

No-Frills Tape Deck

Sangean indicated to us some time back that it would be using a Japanese cassette deck, as those made in Taiwan were not yet of suitable quality. Indeed, we found the deck's motor marked as "Mabuchi Motor," which Toshimichi Ohtake of *Passport to World Band Radio's* Tokyo office reports is the largest micro-mini motor company in Japan.

Recording works just about as you would expect, with some exceptions. Recording facilities are Spartan — no level indicator, no counter, no stereo. The fast-forward and rewind controls are reversed from the customary positions, and the indicator arrows are backwards — fast forward points left, rewind points right. Too, the owner's manual cautions, and our experience confirms, that when going from one control setting to another it's best to press the stop button first, a minor annoyance. Yet, recording quality is acceptable, and the timing facility works properly.

To reduce interference to broadcasts from the recorder, there is a "Beat Cut" control. According to the owner's manual, the Beat Cut control should be set to "on" which is in the number two position.

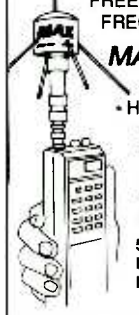
As with most cassette recorders, that of the '818CS comes with a condenser mic. Our tests indicate it works well, with level controlled, as it is when recording via the radio, by automatic level control circuitry, which makes a level indicator unnecessary.

Best WCR Available, Despite Modest Price

Overall, the impression one gets with the '818 is great care to keep the price down. Its radio technology is advanced, but neither the latest nor the most exalted, and recording facilities are downright bare-bones. At $329.00 before discounting, the results show: This set is reasonably priced for all it does.

Although the Sangean ATS-818CS doesn't stir the blood as do some of the top-priced recorder-less portables, it is clearly the best WCR on the market today. No other model even comes close. And it doesn't require putting a second mortgage on the house.

High Performance
800MHz: CORDLESS . BABY MONITORS
FREE CELLULAR OR CORDLESS FREQUENCY CHARTS



MAX 800 GROUND PLANE
- Enjoy the best possible reception
- Hear signals other antennas miss
- Astounding performance outside
- Hear 10 times more signals when mounted directly on scanne
- Use on any scanner with optional adaptor or cable

50 ft. RG6– $35.00 Only **$19.95**
Base Adaptor– $15.00
Hand Held Adaptor– $12.00

AMIGA + ICOM R7000

The Ultimate Scanning Combination. !!!

Finally the power of the Amiga can control the ICOM R7000.
- The ONLY scanner control system that directly generates SPEECH!
- The Amiga can say the frequency, time and even the users comment!
- The Amiga also directly controls the tape recorder, by channel!

Imagine the possibilites, after an automated logging session a tape may be played back with hit activity (no dead time) and accompanying time and/or frequency information. All hit activity will be shown in high resolution graphics and may be saved to disk

Each *individual* channel (up to 1024 per file) may control.....
Lockout (skip channel), Mode (AM / FM / FMN / SSB), Say the frequency, Say the time, Say the users comment, (up to 80 characters long per channel), and / or record the hit on a tape recorder

Scans over 1300 channels per minute on any Amiga.

Global controls can also enable / disable the speech and record functions. User or auto scaled high resolution graphs display current activity and log
Extremely powerful scan delays. May scan by comment. Does NOT need Icoms speech board or Icoms CI-V interface, no radio modifications required
Fully mouse driven, menus, icons, built in editor etc. Range scan. Autosearch mode may generate scan files with date and time log. ASCII file format. Fully multitasking. Requires 1 MByte ram. WB2.0 compatible. Many more features.

Includes custom hardware interface, SCAN7000 software, example scan files, owners manual and U.S. shipping.

$149 (VISA / M-C / check / money order)

R71A Coming ! Future Scanning Systems.
PO BOX 654
Bartlesville OK 74005
tel. (918)-333-7474

demo disk, example scan files and manual $15 (refundable)

PASSPORT'S "RDI White Paper" equipment reports contain virtually everything found during IBS' exhaustive tests of premium receivers and antennas. Bob Grove, WA4PYQ

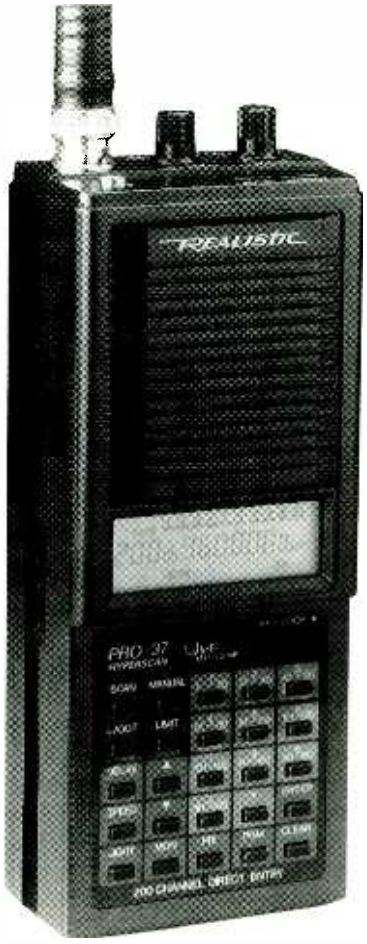
Realistic PRO-37 Handheld Scanner



For years, Radio Shack and Uniden have jockeyed for position in the scanner market. The Uniden BC200XLT has enjoyed the reputation as the leading hand-held, although the now-discontinued Realistic PRO34 was a contendable competitor.

Now Radio Shack has introduced the PRO-37; and it looks good. At $299.95, this new scanner offers quite a handful of features. But the prospective buyer should be aware that he will need to buy batteries (rechargeable or throw-away) and possibly a charger, making the total investment about $60-70 more than the Bearcat which comes with nicads, charger, and a carrying case.

Specsmanship

The PRO-37 frequency range is 30-54, 108-174, 380-512, and 806-960 MHz (less cellular), covering the low, high, UHF, and 800 MHz land mobile services and civilian aircraft band as well.

The 380-406 MHz range won't offer much; 380-400 MHz is the top of the 225-400 MHz AM military aircraft band, but the scanner's FM default there prevents good reception, and there's no two-way communications to be heard between 400 and 406 MHz.

Two hundred memory channels may be memorized in ten banks of 20 channels each, scannable in any combination of banks. An additional ten memory locations are provided in a "monitor bank" to store search-discovered frequencies.

Can the PRO-37 have its cellular frequencies restored? Yes, in almost the same way its predecessor, the PRO-34, could. A reprint of that technique is available from *Monitoring Times* for $2 plus a self-addressed stamped envelope.

Scan speed is much faster than specified, approximately 35 channels per second (50 on search). These can be slowed to 8 if, for any reason not readily apparent to us, anyone wished to do so.

Although the speaker is only 1-3/4" diameter, it delivers full sound with good bass presence, assisted by a 200 mW amplifier, not characteristically shrill as with many other handheld radios.

Individual channels may be temporarily locked out to prevent stopping the scanning sequence, and the two-second rescan delay function is also programmed individually by channel. Channel one may be sampled every two seconds in the priority mode.

While the previously-released PRO-35 is a thinly veiled Uniden BC100XLT, the PRO-37 is not a BC200XLT; it is in a class by itself.

The LCD is top-lit when a specified key is pressed, switching off upon release; a front-panel slide button locks the display to prevent accidental key presses. The BNC-base rubber ducky antenna may be removed so that an external antenna may be attached.

When the scanner is being worn (it comes with a belt clip), the user can look down and conveniently press the manual or scan key on the top, duplicating that same function found on the front panel.

The ability to replace the six AA cells is a strong plus for the PRO-37; rechargeables may be used for routine daily applications, while alkalines permit long-term storage away from power sources.

Current drain is typically 40 mA quiescent (squelched; no signal received), while audio raises that to about 160 mA. Used conservatively, many hours of reception can be expected from a fresh rack of AA cells.

Two power jacks are provided, one to charge optional internal nicads, the other to power the radio from an optional AC wall adaptor (which may be the same device as the charger).

A jack is provided for attachment for an external speaker or earphone.

Sensitivity

We measured weak signal response of our sample at about 0.6 microvolts on low band, 0.3 uV high band, 0.9 uV UHF and 0.75 uV at 800 MHz, quite acceptable for most applications.

This response would be very close to the Bearcat, with the Realistic 0.2 uV better on aircraft and the Bearcat 0.2 uV better on UHF.

Images

With a 10.7 MHz FM IF (455 kHz AM), strong aircraft signals can be overheard on the high band, but no worse than encountered on competitive Bearcats; in fact, somewhat less.

We compared the image rejection of the Realistic to the Bearcat: The image on high band was reduced about 30 dB on the PRO-37 and about 20 dB on the BC220XLT.

At UHF and 800 MHz, however, the two competitors were about the same: images were just as strong as the primary signals!

Selectivity

Adjacent channel rejection was also about the same, about 50 dB down 15 kHz away from the desired frequency.

Radio Shack doesn't mind publishing their specifications; in fact, they are conservative—very refreshing. IF rejection for the 10.7 MHz stage at 154 MHz is reportedly 50 dB; selectivity (-6/-50 dB) is 20 kHz with a 2:1 shape factor.

Spurious signal rejection is published as 50 dB down on low, high and aircraft bands.

With batteries, the PRO-37 weighs 18 ounces; it measures 2-3/4"W x 6-1/2"H x 1-13/16"D. A nice radio, easy to operate and loaded with features.

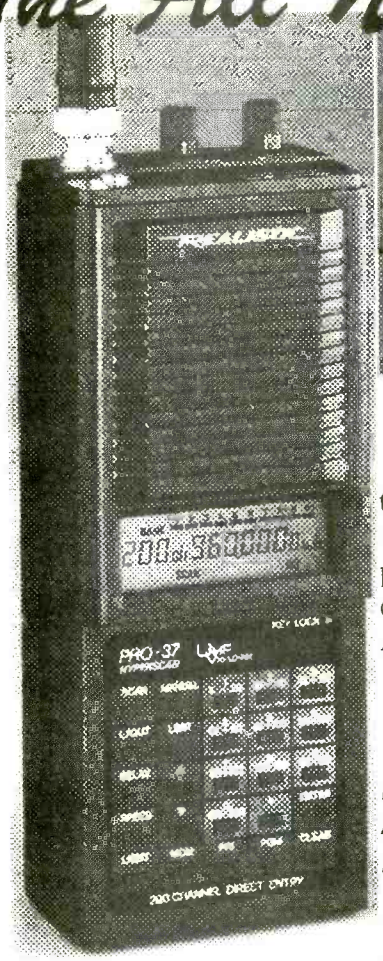
The All New Realistic PRO-37 HANDHELD SCANNER



At Grove's Unbelievable Low Price!

From its wide frequency range to its 200 memory channels, this is one handheld that is out to please the world. This impressive new wonder sports frequency ranges from 30-54, 108-174, 380-512 and 806-960MHz (excluding cellular*). If it's speed you want, the 35 channels per second should satisfy even the hungriest enthusiast's appetite. It s full sound makes every channel a pleasure, and with the choice of using the included NiCads, or your own disposable AAs, the options on this portable powerhouse make it a sure winner.

There's a new power on the market, and it is the PRO-37.

NOW AVAILABLE FROM GROVE ENTERPRISES FOR ONLY $289.95! This includes the AC Adaptor/Charger (Retail of $7.95) and 6 FREE NiCad batteries (Retail of $14.07). This package, specially from Grove, saves you over $32.00 off the nationally advertised price!

* Documentation for cellular restoration is included with purchase of the PRO-37 from Grove Enterprises, or can be purchased from Grove for $2.00 and an SASE.

SALE! on America's Favorite Scanner!

The PRO-2006

Now ONLY $359.95!*

Nationally Advertised at: $399.95

- **400 channel memory**
- **HyperScan**
- **Extended Frequency Coverage**

To order either your PRO-37 or your PRO-2006, call or write Grove Enterprises at:

1-800-438-8155

or

140 Dog Branch Road
Brasstown, NC 28902

* Plus $7.50 Shipping

Mobiling with your SW Receiver

Have you wanted to use your shortwave receiver while traveling in your vehicle? Or have you planned to operate the unit from the 12-volt electrical system in your car, only to find your radio is designed for +6, +9 or +10 volts dc? These objectives may be achieved easily at minimum expense by constructing a simple voltage regulator that you can plug into the cigar lighter socket on your car's dashboard.

Ideally, we should run a separate power-supply line directly to the battery terminals of the car. This method helps to minimize electrical noise that can be transmitted into a shortwave receiver. The battery acts like a large capacitor, and this bypasses a substantial amount of electrical pulse energy that could otherwise show up as QRN in the receiver.

However, it is more convenient to utilize the cigar lighter circuit when borrowing power in a vehicle. You may want to try the cigar lighter outlet first. If reception is quiet, no change will be needed.

Voltage Regulator Circuit

Figure 1 shows the circuit for an adjustable regulator that you can build in a couple of hours. A low-cost LM317 adjustable regulator is used for U1. Other types of adjustable positive regulators may be substituted, provided you pay attention to the pin arrangement of the substitute part. A small TO-220 type of heat sink should be used to keep U1 cool if your receiver draws more than, say, 200 mA of current. The addition of a heat sink is prudent as a general precaution. Small heat sinks are inexpensive. Be sure to apply a thin coating of heat-sink compound on the mating surfaces of the heat sink and U1 before attaching U1 to the sink. This helps to ensure efficient heat transfer.

Diode D1 in Figure 1A protects U1 from damage if your receiver contains a large electrolytic capacitor that can hold a dc voltage charge. High reverse dc voltage can destroy the regulator. D1 allows this charge to bypass U1, back to the regulator input terminal.

DS1 is merely an on-off indicator (LED) for the regulator circuit. It illuminates when S1 is placed in the ON position.

The regulator output voltage is variable from approximately 1.5 to 14 volts. The upper voltage range is dependent upon the ignition voltage that is developed in your particular vehicle. A voltage of 14 at peak battery charge is not uncommon. You can set the voltage by adjusting R1 and monitoring the regulator output by means of a dc voltmeter. The established output voltage will remain constant even though the automobile's voltage will vary as the engine speed changes. C1 helps to assure the U1 output voltage is filtered. This minimizes ignition noise which might otherwise be passed along to your receiver.

You may elect to use a fixed-voltage, three-terminal regulator for U1 if you plan to use only one receiver in the car. Select a regulator that provides the required output voltage. Again, be sure to check the pin arrangement of U1 if this

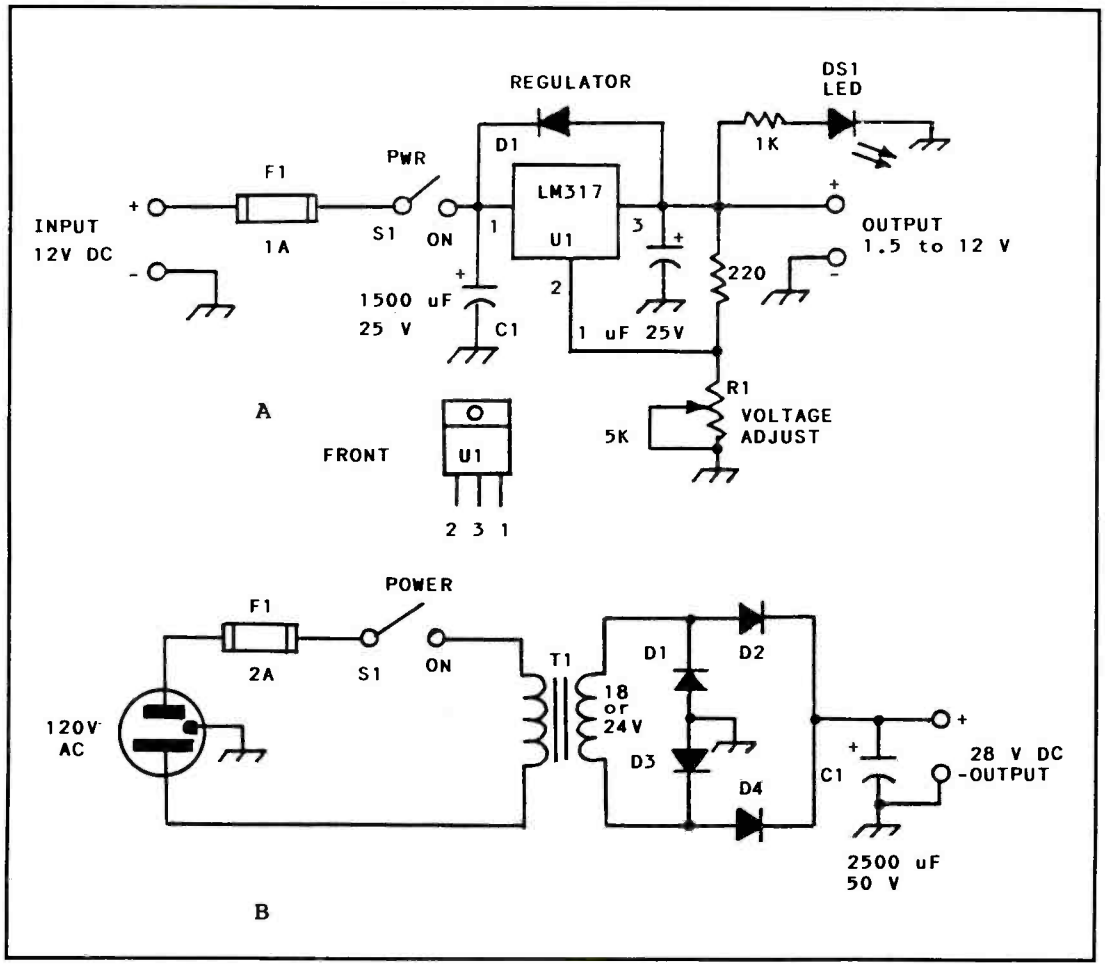

Figure 1: The schematic diagram at A shows the circuit for a simple adjustable voltage regulator which can be operated from a 12-volt dc source. Circuit B is for an ac-operated dc source for the regulator circuit (see text). D1, D2, D3 and D4 are 1-A, 50- or 100-PRV rectifier diodes (1N4001 or equivalent). DS1 is an LED of your choice (red). R1 is a 5000-ohm potentiometer, 1/2 watt or greater. U1 is an adjustable, three-terminal voltage regulator. T1 at B is a 1-A transformer, such as those sold at Radio Shack. Transformers with a higher current rating may be used.

www.americanradiohistory.com

change is made. R1 is not used for a fixed-voltage regulator. It and the 220-ohm resistor may be eliminated. The voltage-adjust pin (no. 2 in Figure 1A) must be grounded when using a fixed regulator.

Your voltage regulator can be housed in a small metal box and installed under the dashboard of your car. One of the small project boxes found at Radio Shack stores can be used for this purpose. Most of the parts specified in Figure 1A should be available at Radio Shack.

An AC Operated Battery Eliminator

Figure 1B shows a circuit you can use in combination with the basic regulator in Figure 1A. C1 is changed to a larger value to provide good filtering of the 120-Hz energy from the rectifier diodes, D1 through D4. F1 is changed to a 2-A unit. A heat sink is mandatory for U1 if you use the circuit at B of Figure 1. This is because the higher input voltage (approximately 28-V dc) will cause greater power dissipation in U1, and this causes the regulator to run quite warm.

Output voltage from U1 will be as great as 25 when you use the ac-operated circuit of Figure 1B. Therefore, the voltage-adjust range will be from 1.5 to 25 volts dc.

A WORD OF CAUTION: The metal mounting tab on U1 is common to pin 3. This means dc voltage is present on the tab. The heat sink must, therefore, be insulated from ground. Alternatively, you may insulate U1 from the heat sink by using a TO-220 mica insulator and nylon mounting screws and nuts. Also, U1 is rated for a load current of 1 ampere (maximum). Do not attempt to use this circuit with equipment that draws high current.

Antennas for Mobile Operation

It is important to recognize the need for a proper mobile antenna when using your SW receiver in the car. Ideally, the antenna should be external on the car and it should be a resonant whip for the frequency of interest. Most CB mobile antennas can be modified for other frequencies by changing the loading coils to provide resonance elsewhere in the HF spectrum. It isn't essential to have an SWR (standing wave ratio) of 1:1 for SW listening, so don't worry about obtaining a perfect match at 50 ohms. You can adjust the turns on the antenna loading coil for maximum signal response at the chosen monitoring frequency.

Some SW receivers will provide acceptable performance if they are placed near the windshield of the car. But, an external whip antenna is by far the better choice for mobile SW reception.

Spark Plug and Alternator Noise

It is likely that you will encounter ignition noise during mobile operation. It may appear only while listening to certain parts of the HF spectrum. Eliminating ignition noise is done in the same manner as described in *The Radio Amateur's Handbook* which is published by the ARRL, Inc., 225 Main St., Newington, CT 06111. If you do not own a *Handbook*, you should be able to find a copy at your local library, or perhaps you can borrow a copy from a friend.

In Summary

You may not contemplate operating mobile with your SW receiver. If not, the regulator in Figure 1 is useful for camping trips if you intend to do a lot of SWLing. Certainly, using the car battery will enable you to eliminate the replacement cost of dry batteries. Some portable radios tend to "eat" batteries quickly, especially at high audio volume levels.

Computer Aided Scanning

a new dimension in communications from Datametrics

Now Radio Shack PRO 2006 owners for the first time have access to the exciting world of Computer Aided Scanning with the highly acclaimed Datametrics Communications Manager system. Computer Aided Scanning is as significant as the digital scanner was five years ago and is changing the way people think about radio communications.

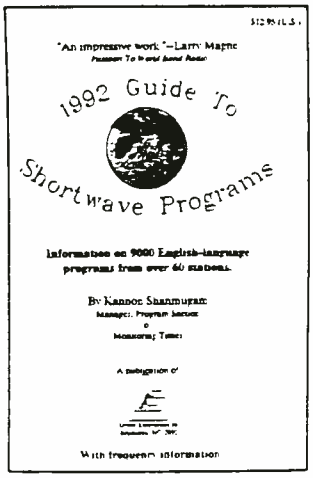
- The Datametrics Communications Manager provides computer control over the Radio Shack PRO2006 receiver.
- Powerful menu driven software includes full monitoring display, digital spectrum analyzer and system editor.
- Uses innovative Machine State Virtualizer technology (patent pending) hardware interface by Datametrics.
- Comprehensive manual includes step by step instructions, screen displays, and reference information.
- Extends receiver capabilities including autolog recording facilities, 1000 channel capacity per file, and much more.
- Simple 4 step installation - no soldering or modification to normal receiver operations.

Datametrics, Inc

- Computer Aided Scanning system $ 349
- PRO2006 receiver w/interface installed and CAS system $ 749
- Manual and demo disk $15

Requires Radio Shack PRO 2006 receiver and IBM PC with 360K memory (640K for full channel capacity) and parallel (printer) port.

Send check or money order to Datametrics, Inc., 2575 South Bayshore Dr. Suite 8A, Coconut Grove, FL 33133. 30 day return privileges apply.



Brand New!

1992 Guide to Shortwave Programs

by Kannon Shanmugam
Program Mgr., Monitoring Times

Finally, an exhaustive listing of English-language shortwave broadcast programs! Up-to-date and meticulously documented, this superb 133 page book lists some 9000 programs from more than 60 worldwide broadcasters.

Extensively cross-referenced by time and day of the week; includes a comprehensive frequency list to increase your chances of success. Professionally printed and easy to read.

Only **$12.95**

An All-Purpose S-Meter for any Receiver

Something old, something new: Received Signal Level meters for shortwave, ham and CB radios are as old as the hills. S-meters for scanners and just about any other radios are unheard of. This article presents a powerhouse, versatile S-meter circuit which will work in most any ham, CB, scanner, shortwave, broadcast, pocket, portable or handy-talkie around. Merry Christmas!

First, a little theory on what we're about to do. An S-meter gives a visual indication of the relative strength of incoming RF signals. The receiver develops a special signal from incoming RF signals and processes it for 0-volts at no RF signal to 1-volt or more on extremely strong RF signals. S-metering gives a relative indication of signal strength which is comparable to the scale of miles on a map. The distance between two cities on paper might be a couple of inches, but a scale of miles conveys a relative sense of reality. An S-meter does something similar.

Cost and space limitations prohibit the special S-meter circuitry from being included in scanners, portables, and budget-priced broadcast and shortwave receivers. That special circuitry includes Automatic Gain Control (AGC) which controls the amplification of the receiver's RF and IF circuits to prevent overload and certain kinds of interference. This control signal varies proportionally with the strength of incoming RF signals. When a few extra parts are thrown in, AGC can be metered for a visual indication of RF signal strength; in other words, it becomes an S-meter, a valuable tool for the radio monitoring enthusiast. We can't readily add AGC to receivers that aren't designed with it, but we can use a different method to fit an S-meter into just about any kind of radio ever made, regardless of cost and quality.

The predominant criteria are that the receiver have enough space to install a mini-phone jack or two, and a DX power source of at least +8V to +14V. If the receiver doesn't have 8-14 volts, the circuit can work from an external DC source.

If the receiver is large enough, both the circuit and the meter should be installed completely inside the radio, self-contained. If size or preference are limiting factors, then the circuit can be installed inside the radio with the output signal for the meter routed to a small phone jack at a convenient place on the rear of the receiver. An external meter can be plugged into the phone jack.

If the receiver is too small, then the necessary internal modifications involve only a wire from a signal point to the jack, and another wire from 8-14V DC power to the jack. The circuit and meter can then be accommodated outside the receiver. Versatility and flexibility are keynotes of this new S-meter circuit.

Build the circuit on perfboard, about 1.5 by 1.5 inches. Physical layout is not critical, but follow the general schematic layout of Figure 1. Make the board as small as possible and, unless your receiver is very small, the board should be installed as close to the signal tap as possible, even if the meter will be placed outside the receiver. The reason for this is that the IF signal point has to be tapped for the board and can pick up or radiate noise if the connection is lengthy.

For a hand-held receiver, mount the jack as close to the signal tap as possible and use a very short hookup wire from the signal source to the ring lug of a one-eighth inch stereo jack. DC power should go to the TIP lug of the jack and the radio's ground to the shell of the jack. From the jack on out to the board, use a short length of mini-coax cable such as RG-177 or RG-58 to carry the IF signal to the board. The shield of the coax will be the ground conductor and an insulated wire can be run along with the coax for DX power to the board.

For a base receiver, where the meter is to be external, the board should still be installed in the scanner as close to the signal tap as possible and only two wires need exit the scanner: ground and S-meter signal. Coax is required between the signal tap and the board only if more than a couple of inches separate them.

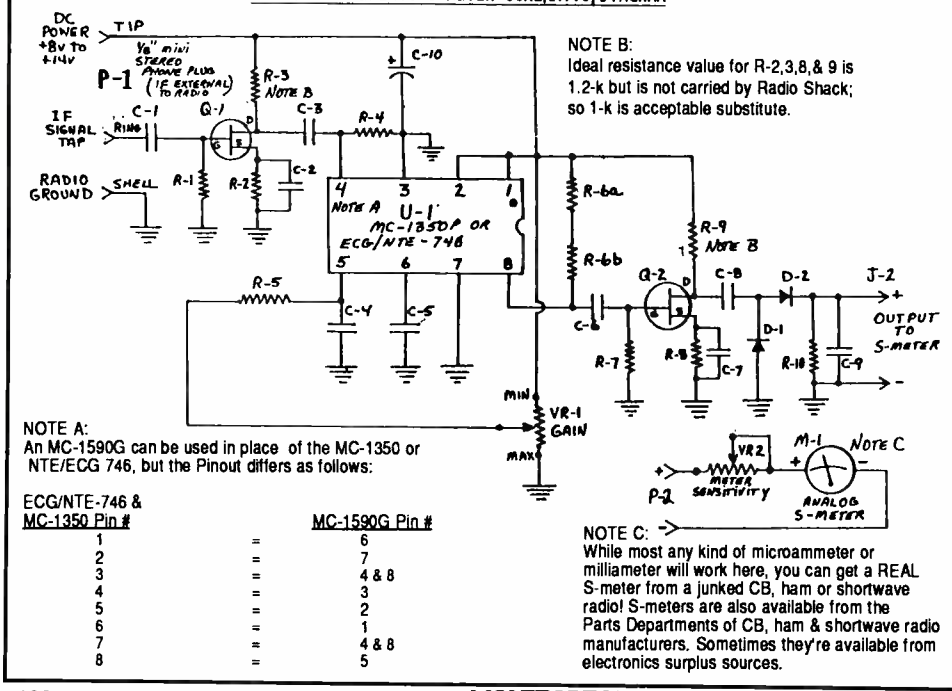
Locating the proper signal tap for the S-meter board can be tricky, but a service manual or at least a schematic diagram for the receiver will help identify the proper pickoff point. As a general rule, the S-meter circuit should tap into the receiver's last IF section before any amplifiers (or limiters) in that section. Most modern receivers have a 455 kHz final IF section, so the proper pickoff point is right after where the first or second IF section is mixed and down-converted to 455 kHz.

The majority of applications for my new S-meter circuit will probably be for VHF-UHF receivers, so the proper signal taps for scanners are given in Figure 3. It's easy to S-meter a scanner, because a certain type of IC chip is used in virtually all scanners, and we can tap that chip for our circuit.

The integrated circuit, the NFM/AM chip, comes in several styles, numbers and pin counts, but its function is the same in all scanners. Check the sidebar for your scanner, next to which is given a circuit symbol, chip number and the essential signal tap pin for the S-meter circuit connection. If your scanner isn't listed, no problem. Only a few chips are used among all scanners, so review the sidebar and scrutinize the innards of your scanner for one of the listed NFM/AM chips.

This NFM/AM chip can be recognized by the presence of a ceramic IF filter connected between its pins 3 and 5 or 4 and 6. An IF filter can be described as a small cube-shaped plastic device

FIGURE 1: GENERIC S-METER SCHEMATIC DIAGRAM



NOTE A:
An MC-1590G can be used in place of the MC-1350 or NTE/ECG 746, but the Pinout differs as follows:

ECG/NTE-746 & MC-1350 Pin #		MC-1590G Pin #
1	=	6
2	=	7
3	=	4 & 8
4	=	3
5	=	2
6	=	1
7	=	4 & 8
8	=	5

NOTE B:
Ideal resistance value for R-2,3,8,& 9 is 1.2-k but is not carried by Radio Shack; so 1-k is acceptable substitute.

NOTE C:
While most any kind of microammeter or milliameter will work here, you can get a REAL S-meter from a junked CB, ham or shortwave radio! S-meters are also available from the Parts Departments of CB, ham & shortwave radio manufacturers. Sometimes they're available from electronics surplus sources.

www.americanradiohistory.com

of varying colors, often blue, with markings similar to CFU-455 or K F455R. Find the IF filter first and then the chip that it feeds will be the one for which you're looking. The signal tap for the S-meter will be the output pin of this filter, which connects to pin 5 of most NFM/AM chips or pin 6 of virtually all the rest.

It's impossible to give installation instructions for specific scanners and other radios. But if you run into trouble with this project, and if you have the service manual for the radio, I can be available to render written assistance to steer you back on the narrow and righteous path to success. Include an SASE with your request. If I don't have the service manual for your radio, I will ask for a copy of yours.

Explanation and Adjustment of the S-Meter Circuit

C-1 taps a sample of the receiver's low-level final IF signal into Q-1, a JFET which puts a high impedance isolation between the scanner and the S-meter circuit. Q-1 drives U-1, a high-gain integrated RF/IF amplifier. VR-1 sets the gain of U-1, a high gain integrated RF/IF amplifier. VR-1 sets the gain of U-1.

The highly amplified signal is fed from U-1, pin 8 to Q-2, which isolates the output circuit and meter from U-1. D-1, D-2, R-10 and C-9 rectify and filter the amplified IF into a DC signal to drive an S-meter for relative indications of incoming RF signals. The DC output signal can be fed to an LED S-meter for the same results.

Depending on the block gain set by VR-1, the DC output from D-2 will be about 0-volts when no signals come in and can be as high as 5 volts+ when extremely strong signals are received. VR-1 must be set so that the DC output from D-2 with no RF signal coming in is less than 0.2 volts, or so that the S-meter reads nearly zero.

Then tune the receiver to a very strong signal. A nearby handy-talkie, cordless telephone, ham or CB radio can be used to generate this strong signal, if needed. Adjust VR-2 so that the S-meter reads just at its maximum point—no more, no less.

This S-meter probably will not function in the wideband (WFM) mode if your receiver is so equipped, but NFM and AM will always work great.

There could be other uses for this circuit besides S-metering. The chip and the circuit are extremely versatile, so use your imagination.

Figure 2: Generic S-meter parts list

Symbol	Description	Radio Shack #

Feeding Your Receiver a Line

For the radio monitoring enthusiast, the antenna is an interface with the world. To maximize the fun which comes to us through that interface, we usually try to get the best antenna we feel the situation and our pocketbooks warrant. Getting a good antenna and putting it into the air is one thing: getting the signal from that antenna on down to the receiver is another. This month we'll discuss how to get that signal where you want it without losing any more of the signal than is necessary and without adding any unnecessary noise.

As you will see, the basic concepts involved are few and relatively simple, but if we ignore them we may find that a good antenna performs poorly due to excess signal loss and/or unnecessary noise interference in some situations.

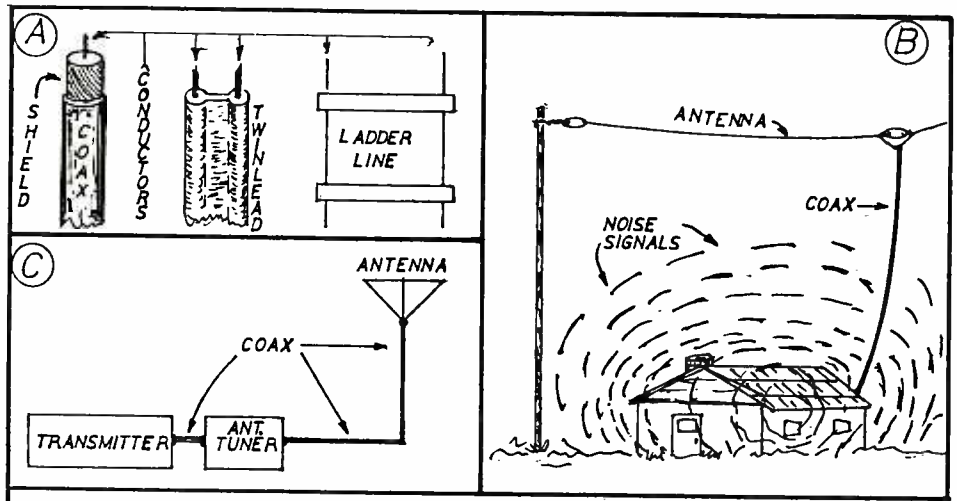

FIG.1. COMMON FEEDLINE TYPES (A), GETTING THE ANTENNA OUT OF THE NOISE(B), TUNER HOOK-UP (C).

Born to Lose?

A major factor in feedline performance is the degree of loss which a signal will undergo in traversing the line. If you must run your feeder for a long run between antenna and receiver, then you will have more feedline loss: a very short run of feedline will have relatively low loss. But what constitutes a long or short run is subjective. Sixty to 100 feet or more might be considered a long run on the HF bands (3-30 MHz). For the VHF or UHF bands a run of 20 to 40 feet can be considered long, especially at UHF.

If you are concerned about feedline loss, as you might be in monitoring very weak signals, the lowest-loss choice is generally a decent grade of twinlead (Figure 1). Or, better yet, its big brother, ladder-line, an open-wire two-conductor feeder. But even though it may be the lowest loss line available to you, twinlead may still not be your best choice due to other factors. For instance, twinlead may not work at all well if it must be run through a metal duct, underground, or too close to a metal building or roof.

Coaxial cable (Figure 1A) is not affected by such environmental factors as nearby metal objects or being run through a metal duct. It can even be run underground or under water and still function perfectly if its outer waterproof jacket is intact. So for many long lines you may want to use a very good grade of foam coax to reduce the amount of signal loss.

What Noise Annoys a Monitor?

Have you ever been monitoring some interesting DX station and noticed a loud burst of interference which seemed to happen just when an automobile or truck would drive by? Such interference is caused by sparks in the ignition system of the auto or truck. This kind of electrical noise is just one example of the sort of electrical noise that can interfere with our monitoring pleasure and success.

Unfortunately electrical noise abounds in many homes or monitoring locations due to sparking from the operation of electrical motors, appliances with relays, various kinds of lighting, certain kinds of solid-state circuitry, and other electrical devices. In other words, we live immersed in a veritable cloud of waves which can cause electrical radio interference. And, more to the point, our radio receivers live in this cloud also (see Figure 1B).

Luckily both of the commonly used antenna feedlines are resistant to some degree to this interference: coaxial cable being a great deal more resistant to it than twinlead. Thus, if we put our antenna away from the noise sources, somewhere outside the house, like on the roof, it will often pick up less noise than if it were in the house. And if we then feed the signals from the antenna to the receiver through coaxial cable, the coaxial feedline will pick up very little of the electrical noise which is generated in your house, even though the feedline passes through the area of strong noise in the house.

In this way we can often reduce noise levels at the receiver, as compared to just running a long wire — which essentially acts as an extension of the antenna — from the antenna, through the house and its noise field to the receiver.

The Perfect Match

If you are interested only in radio reception, not in transmitting, you can ignore this "perfect match" section. But if, in addition to your monitoring interests, you are a ham or a CB operator, you will be concerned with the amount of signal which traverses the feedline from your transmitter to the antenna.

When your transmitter produces a signal, this signal must get from the transmitter onto the feedline, and then after traversing the feedline it must get off the feedline and onto your antenna. In this case, you will want to make sure that your feedline "matches" both your transmitter and your antenna. Luckily we can do this fairly easily by getting a feedline with the same impedance as our antenna. For example, a halfwave dipole is 75 ohms impedance which matches 75 ohm coaxial cable or 75 ohm twinlead. Then, a so-called "antenna tuner" between the transmitter and the feedline (Figure 1C), actually "matches" the whole antenna system, i.e. antenna-plus-feedline to your transmitter's output.

But, if you are interested only in monitoring, you can usually forget the matching problem because reception limits are generally determined by how high the signal is above the noise that accompanies that signal, not on how well the antenna system is matched. Most often the quality of the coax is more important than the impedance, and 50, 75, or 92 ohm coax all often work essentially the same with an antenna in a receiving situation.

In a receive-only situation, an antenna tuner may seem to help, because you can tune it and hear the signals peak. However, without the tuner in the feedline, it is likely that the signals would be just as readable across the band with no peaking needed. In low-noise situations, an antenna tuner may occasionally help on very weak signals.

www.americanradiohistory.com

And So

So the things the monitoring enthusiast should especially remember about feedlines are:

1. If you are working very weak signals or using long runs of feedline, use a low-loss feedline such as twinlead or low-loss foam coaxial cable.

2. If you are bothered by locally generated noise, you may be able to get far enough away from it by moving your antenna farther away or higher and then using a coaxial cable to get the signal safely through the cloud of noise waves around your monitoring post.

3. If your feedline must run through regions likely to degrade a radio signal through a metal conduit, very close to a metal wall, through a damp environment, or underground, then coax is your best choice.

4. If you are concerned with transmitting from your antenna, then become familiar with the basics of matching antennas and feedlines, and of matching your transmitter to your antenna system.

RADIO RIDDLES

Last Month's:

Last month I asked: "What led Hertz to look for radio waves and thus develop the world's first transmitter, receiver and antenna?"

Well, the waves which Hertz found had been predicted through a mathematical treatment of known physical data on electrical and magnetic phenomena. Using this theoretical base, Hertz produced electromagnetic waves with a spark-coil and spark-gap. The rods which held the spark gap actually acted as antennas. He used other similar rods as a receiving antenna, and a minute sparkgap as a receiver (detector).

This work by Maxwell and Hertz laid the foundations for wireless and radio theory and is still vitally important today to physicists and engineers concerned with electromagnetic waves.

This Month's:

Can you tell me just what is "short" about a shortwave or "long" about a longwave?

Well, that's it for now. Get the answer to this month's radio riddle and much more in the next issue of Monitoring Times. Till then, Peace, DX, and 73.

Includes:7' mesh dish with polar mount & quad feed support, slide jack, Echostar 3000 IRD 40° LNB & feed. (VCII+ module optional)

WORLD SATELLITE TV AND SCRAMBLING METHODS

"The Technicians' Handbook"

This thorough text is a must-buy for technicians, satellite professionals and curious do-it-yourselfers. The design, operation and repair of satellite antennas, feeds, LNBs, receivers and modulators are examined in detail. An in-depth study of scrambling methods and broadcast formats including the VideoCipher II, Oak Orion, FilmNet, Sky Channel, EuroCypher, D2 MAC, BSB and Teleclub Payview III. Circuit and block diagrams of all components are presented and clearly examined throughout the handbook. This expert guidance on testing, servicing and tuning is complimented by a wealth of detailed illustrations.

340 pages, 8 1/2 x 10 3/8 over 200 photos, diagrams, wiring schematics and 16 tables / appendices / index

S&H $5 (U.S.) $39.95

TUNE YOUR DISH TO ITS MAXIMUM!

"With The Pico" Signal Meter

A must for the serious dealer or satellite system owner. Saves time, frustration and money. Use when installing a new system, moving your dish, re-alignment of a dish that has been moved by wind, frost heaves etc., gets you right on the satellite belt for the best possible pictures!

Pico signal meter S&H $6 $89.95

All IRDs INCLUDE the NEW VideoCipher II PLUS

IRDs / RECEIVERS / SYSTEMS

ask bob

Bob Grove, WA4PYQ

Q. How can I add an alert tone to my CB radio so that I can know when I am receiving a call without having the radio turned on all the time? (Ricardo Moliner, Fort Lee, NJ)

A. While this may seem simple at first, there are a number of details you probably haven't thought of. The transmitting station that you are listening for would have to send a coded signal (tone or digital burst) that your receiver is equipped to detect.

Your receiver would have to be equipped with a digital or analog decoder which would sense that signal, then deliver a pulse to an audio oscillator which would be connected to your radio's amplifier and speaker.

Such equipment could be added externally; the encoder would go on the microphone cable and the decoder could be on an accessory speaker. I am unaware of such aftermarket accessories for CB radios.

Professional two-way radios use tone- (or digitally-) encoded squelch which allows your receiver to remain quiet until the appropriate signal is heard, thus tripping the squelch. This avoids the unnecessary extra step having to manually switch the radio on after you hear the tone.

Q. Are modern TV sets more or less sensitive than older sets? (William Bovard, Grove City, PA)

A. Good question. For the answer, I called a long-time TV service technician who claims that there has been a substantial improvement in weak-signal sensitivity on newer sets, and that old sets had a tendency to be considerably noisier. We'll defer to his judgment!

Q. Can an Optoelectronics frequency counter be connected to an attic scanner antenna so that I can tell if anyone wearing a body bug enters the premises? (John Tillman, Lexington, KY)

A. Possibly. A frequency counter will respond to any radio frequency signals strong enough to trigger its input circuitry. If that is random noise from a fluorescent light fixture, or a 50,000 watt TV transmitter down the road, it will cause the display to read.

If there are sources of strong radio frequency interference near the antenna, whether it's on the frequency counter or remotely located in the attic, you will probably see that rather than a low-powered body transmitter 30-40 feet away.

If you are out in the country with no sources of RF interference around, it may work fine. Try it with a low-cost wireless microphone or cordless telephone; if that works, chances are you will see the bug frequency at the same distance.

Q. Adding a coax-fed dipole to my Sony ICF2010 portable shortwave receiver results in a bad mismatch because the external antenna jack was designed for a random wire which is high impedance. What to do? (Jim Hossack, Redmond, WA)

Which is appropriate for shortwave receivers, an antenna tuner or preselector? (Robert Stone, NY, NY)

A. Impedance mismatch is rarely a problem for modern, sensitive shortwave receivers. True, the signal may seem slightly weaker than it should, but so will the background noise. Assuming you have at least 25-75 feet of antenna length connected the radio, slightly increasing the volume will accomplish the same thing as matching the impedance.

A frequency preselector, on the other hand, narrows the spectrum of incoming signals to a sharp swath centered on your frequency of interest; this may dramatically reduce intermodulation (intermod) and image response from strong, off-frequency signals.

Q. How important is height for a scanner antenna? (William Bovard, Grove City, PA)

A. Scanner-band signals travel pretty much line of sight; thus, the higher the antenna, the more distant that antenna can "see." But once the antenna is high enough to clear nearby obstacles, its height would have to be doubled or even quadrupled to provide noticeable improvement.

Q. Why don't scanner manufacturers include a battery test button so that the user knows how much time is left? (Ken Greenberg, Skokie, IL)

A. The additional cost, space requirements, and the fact that NiCd batteries won't show a linear voltage change with discharge time makes such a provision impractical.

Q. I recently tuned in a RTTY station, but all it was sending was a string of RYs. How long do they send these before they identify? (John Jager, Whitby, Ont.)

A. Indefinitely. RY was chosen initially because it "exercised" every significant bit of the five-level Baudot code, forcing all the parts in the old mechanical teleprinters to respond. It survivies in today's electronic environment just because there's no reason to change.

Transmissions of this type are used for a variety of purposes including testing the transmitting and receiving equipment, determining the propagation path at that frequency and time, and holding the frequency open so that no one else uses it.

Q. Is there any advantage to putting a second preamplifier in line with one already there? (William Bovard, Grove City, PA)

A. No. The added gain is likely to overload the receiver or second preamplifier, producing interference products. The primary purpose of a preamp is to use a very-low-noise transistor to provide better signal-to-noise ratio for weak signal reception. Added gain is of minimal benefit.

Q. What type of antenna is best suited for tropical band DXing? (Louis Metzman, Cupertino, CA)

A. The tropical broadcast band, 3200-3400 kHz, is best heard with an elevated dipole (the higher the better) approximately 142 feet in length and fed at the center with coaxial cable.

To determine the proper orientation of the wire, acquire a world globe and stretch a thread between the center of interest and your location. The antenna wire should be strung at right angles to this thread for best reception (so that the signal arrives broadside to the wire, not off the ends).

In other words, an antenna wire strung north to south hears best from east and west, from signals arriving perpendicular to the wire's axis.

www.americanradiohistory.com

***Q.** How can I determine whether there is too much metal nearby to successfully install a shortwave listening antenna in my attic? I will soon be installing a full-house attic fan; will its metallic mass interfere? (Lorie Call, Santa Clara, CA)*

A. The area of a large metallic mass, the length of a thin conductor, and their relative separation are all considerations for avoiding a nearby metal obstacle.

Ideally, any sizable (or long and parallel) conductor should be at least 1/2 wavelength away from the antenna at the lowest frequency of interest. At shortwave frequencies, this is impossible in an attic since we are talking about 50-150 feet!

Fortunately, the fan represents only a few square feet of area, and its cross-sectional length is short; it will have very little influence on a nearby wire dipole at shortwave frequencies. House wiring, ducting, plumbing and electrical wiring will have far more effect.

Any indoor antenna is always a compromise; only an actual test will reveal the degree of its success. If, after you listen for a few evenings, you suffer from massive electrical noise, or signals of interest are always very weak, you will know that you will have to select another antenna configuration.

***Q.** Can I increase signal strengths on my Sony AN-1 active antenna (or my portable radio) by using a longer whip? (Daryl Young, Jr., Natchez, MS)*

A. Yes, up to a degree. Sony has optimized the length of the whip on their AN-1 to avoid overload problems that a longer whip would cause. The longer the antenna, the more intermodulation ("intermod") you will experience; this sounds like a constant din or blend of background radio signals that really shouldn't be where you are tuning.

The same holds true for portable shortwave radios; adding some wire to their whips will increase reception, but strong-signal overload problems are usually attendant, spoiling reception. Experiment with a few additional feet of wire and select a happy medium for your installation.

***Q.** Are there any frequency extension or memory upgrades available for the Realistic PRO-2011 scanner? (Kenneth Koerper, Ironton, OH)*

A. No.

***Q.** If possession or use of a descrambler is now illegal under the ECPA, how can anyone even own a scrambled system for his own use which, by its very nature, must contain a descrambler? (John Opp, Pierre, SD)*

A. The prohibition against manufacture, sales, possession or use of a descrambler must be considered in the context of the wording of the Electronic Communications Privacy Act.

You are forbidden from descrambling any transmission to which you are not entitled to listen.

Bob's Tip of the Month

Memory Lockup on the AR1000

There are several things we learn not to do: Don't spit into the wind, don't poke your finger into a fan and don't clear memory channels in the AR1000!

Fred Wolf, N3CL, assures us from first-hand experience that sequentially pressing CLEAR, ENTER on several successive channels guarantees a trip to the factory to reset the microprocessor after it locks up.

The CLEAR button is intended to delete an erroneous key press before it is entered, not to remove a memorized frequency which confounds the microprocessor.

801SCAN

COMPUTER-CONTROL for ICOM

For the R71A.....

NEW! Our 801HF listening control program is designed especially for the needs of the serious HF listener. It provides scanning but is also oriented toward scheduled events. Full-featured program includes Scan, Search, Auto-Search, Scheduled Scan, Channel/Bank organization, Terminal-Unit Window, and Notepad Database. 801HF is not just another scanning program!

For the R7000/R9000....

Transform your R7000/R9000 into the Ultimate Scanning Receiver! Add flexible control to match the R7000/R9000's superior receiving capabilities. Includes Scan, Search, Auto-Search, Fast Bank Switching, Activity % Logging and new Event Logging for detailed activity reports. The 801A Scanning System finishes what ICOM started!

Both programs let you scan/search forward or backward, quickly select from multiple scan-continue options andtimers, read/set memories from your data, import channel data from any text file! They run on almost any DOS PC with 640K of memory.

801-SCAN is now part of Terzon Systems Inc. We have a voice mail order-info system at (214) 234-8222, mailbox 801.

Programs with interface and cable start at $144.95. Program only (use your interface) from $94.95. Demo disk $5 (specify receiver). Check, M.O., MC/VISA. Texas residents add 8% tax.

Club Circuit

Welcome to the first edition of the **Club Circuit**. Each month on this page you will find listings of all kinds of radio clubs with interests from DC to Daylight. Some are organized around a geographic region; others are devoted to a specific facet of listening.

We encourage you to get involved, preferably with a group that periodically meets together face to face. If there's no group in your region, why not help start one? We'll print (one time only) your name and address as a contact person in hopes that other *MT* readers in your area will contact you if they are interested in such a venture.

Who can get on the list and how? The column is open to all radio listener clubs, regardless of affiliation. Thanks go to the clubs below who responded to our initial mailing. Our main intent, though, is to list local chapters and small independent clubs. The only way we'll hear about such clubs is for someone to write us. Request a listing form for the Club Circuit, fill it out and return it, and that's all there is to do.

What do you get in return? Free advertising to thousands of readers and one free *MT* subscription to the club — you can't beat that for the price of two stamps! Overseas clubs will also be eligible for the MT subscription if they will pay the postage costs.

More information on clubs may be forthcoming if you write the following umbrella organizations: ANARC, The Association of North American Radio Clubs (79 Kipps Street, Greenfield Park, Quebec, J4V 3B1, Canada); EDXC, The European DX Council (P.O. Box 4, St. Ives, Huntingdon, Cambs., PE17 4FE, UK); SPARC, South Pacific Association of Radio Clubs (c/o NZ Radio DX League, P.O. Box 1313, Invercargill, New Zealand).

Letters
continued from p. 4

monitor who is interested in pirate radio stations. He's never heard a pirate, but he'd like to. The problem is, he is blind, so reading lists of frequencies is not possible. He asks if anyone could send him some pointers on cassette; some active pirate frequencies, and maybe a tape of what to listen for. Call him at 218-729-7752 if you can help or send a cassette to P.O. Box 68, Saginaw, MI 55779. I think shortwave is his band of interest, but call to be sure.

Thanks for the letters, news, thoughts, and opinions. The past year has been a good one for *Monitoring Times*, and our readers are the reason. We're pleased to announce a new page for club listings in the back, next to the Special Events Calendar, and next month we inaugurate a column on Computers and Radio.

There's no resting on our laurels, however. More than ever, each one of us needs to stay alert to events in the changing world around us. The balance between the public good vs. the right of the individual is always a shaky one, at best, but every time the world starts to change, we teeter back and forth all over again. Our fight for the right to listen may only seem a small matter to some. It is not. Important issues lie behind it — so write your congressman.

Until next year, here's wishing you a happy holiday and the very best of monitoring times.

Rachel Baughn,
Editor

We'd like to hear your comments, opinions, and experiences concerning the world of radio. Please understand that personal replies are not always possible.

Letters should be addressed to: ***Letters to the Editor,*** *Monitoring Times, P.O. Box 98, Brasstown, NC 28902-0098.*

SPECIAL EVENT CALENDAR

Date	Location	Club/Contact Person
Dec 1	**Pasadena, CA**	Toys for Tots Ham Rally/Bruce Nolte, N6TFS PO Box 41446, Los Angeles, CA 90041, (213)257-5502. Location: Rose Bowl Parking Lot #1. Admission: 1 toy valued at $5 or more. Talk -in on 145.180.
Jan 18	**Hammond, LA**	SE Louisiana Amateur Radio Club/Ernest Bush, N5NIB 331 Rock Road, Hammond, LA 70403, (504) 567-1261 or (504) 542-0034 Location: SLU University Center, 9-4, free admission.

BROADCAST BAND INTERFERENCE?

Plagued with interference from high powered AM broadcast stations? Block it before it gets to your receiver with a precision filter from NCL. Two models provide 40+ dB rejection of broadcast band energies below and above the AM broadcast band. A variety of options allow flexibility in connection and mounting. All filters include weather proofing for outside applications. Call or write for free tech sheets on quality communication products from NCL. Designed by monitors for monitors. Models starting at $49.95.

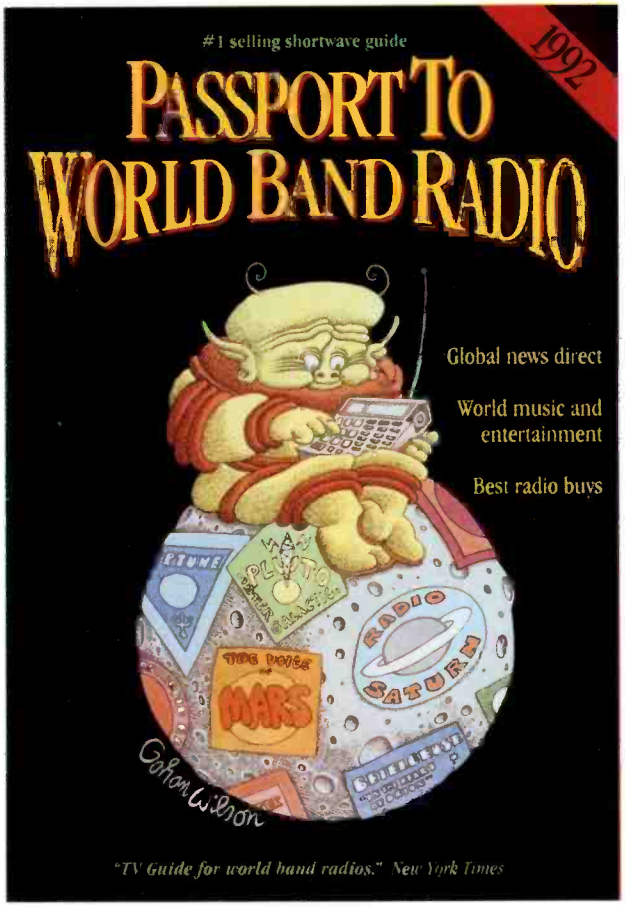
The (shortwave) bible just got better.



A year of turmoil. In 1991, the cold war thawed, hot war broke out, and the world's shortwave broadcasters shifted languages, frequencies, times, and targets more than ever before.

Passport to World Band Radio, your bible for shortwave listening worldwide, has kept up with the changes, and then some. In the 1992 edition, you'll find up-to-the-minute information to delight program listeners and DXers alike:

- **The world's best frequency guide**—*Passport's* famous Blue Pages—thoroughly updated to reflect the changing airwaves: 9,700 of 15,630 entries contain new information.
- **A brand new 18-page reference** to stations that respond to inquiries. Here's who to contact, where, toll-free numbers, and other helpful information.
- **Larry Magne's no-holds-barred reviews** of portable and tabletop receivers sort the diamonds from the turkeys. Find out the inside scoop on the new top guns, including the Drake R8 and the Japan Radio NRD-535.
- **What's On Tonight?** An hour-by-hour guide to world band shows guides you through the best of the best and the worst of the worst.
- **Country-by-country references,** including "Worldwide Broadcasts in English" and "Voices From Home." Newly formatted to make it easy to find the station you want at the time you want.

At your dealer or bookstore now. See why *Passport* has become the largest-selling shortwave publication in North America. For further information, write *Passport to World Band Radio*, Box 300A, Penn's Park, PA 18943 or call (24 hours) 215/794-8252.

THE BEST OF BOTH WORLDS.

The pacesetting IC-R9000 truly reflects ICOM's long-term commitment to excellence. This single-cabinet receiver covers both local area VHF/UHF and worldwide MF/HF bands. It's a natural first choice for elaborate communications centers, professional service facilities and serious home setups alike. Test-tune ICOM's IC-R9000 and experience a totally new dimension in top-of-the-line receiver performance!

Complete Communications Receiver. Covers 100KHz to 1999.8MHz, all modes, all frequencies! The general coverage IC-R9000 receiver uses 11 separate bandpass filters in the 100KHz to 30MHz range and precise-tuned bandpass filters with low noise GaAsFETs in VHF and upper frequency bands. Exceptionally high sensitivity, intermod immunity and frequency stability in all ranges.

Multi-Function Five Inch CRT. Displays frequencies, modes, memory contents, operator-entered notes and function menus. Features a subdisplay area for printed modes such as RTTY, SITOR and PACKET (external T.U. required).

Spectrum Scope. Indicates all signal activities within a +/-25, 50 or 100KHz range of your tuned frequency. It's ideal for spotting random signals that pass unnoticed with ordinary monitoring receivers.

1000 Multi-Function Memories. Store frequencies, modes, and tuning steps. Includes an editor for moving contents between memories, plus an on-screen notepad for all memory locations.

Eight Scanning Modes. Includes programmable limits, automatic frequency and time-mark storage of scanned signals, full, restricted or mode-selected memory scanning, priority channel watch, voice-sense scanning and scanning a selectable width around your tuned frequency. Absolutely the last word in full spectrum monitoring.

Professional Quality Throughout. The revolutionary IC-R9000 features IF Shift, IF Notch, a fully adjustable noise blanker, and more. The Direct Digital Synthesizer assures the widest dynamic range, lowest noise and rapid scanning. Designed for dependable long-term performance. Backed by a full one-year warranty at any one of ICOM's four North American Service Centers!
